WE MAKE DREAMS COME TRUE. YOUR DREAMS.

A team of experienced gunsmiths and designers have been creating customized solutions at our Blaser Custom Shop since 2009, turning hunting rifles into individual hunting companions for you. We believe that innovative technology and traditional craftsmanship go together like the cheese and noodles in one of our traditional regional dishes. Once you have had a taste, you are hooked. That also applies to the creations from the Blaser workshop. Whether bolt handle ball, stock inlay, or a rifle pair – we make any wish come true, with great attention to detail.

MASTERFUL.

Our master engravers add elegant decorations to receivers, trigger guards applied or rifle barrels. In some cases, it takes up to a thousand hours until they have painstakingly applies all lines and points to the plain metal by hand, creating vivid images that give the rifle its very own character.

The intention of creating something extraordinary has a longstanding tradition at the Blaser Custom Shop and gives rise to completely new ideas. Inspired by nature, for example wood grain or fur patterns, we use state-of-the-art technologies to create a completely new level of tactile and aesthetic appeal that is second to none. This is particularly true when rare materials are used that are not traditionally used in gunmaking, such as leather, carbon fiber, Raffir®, ruthenium, ceramics, rhodium, gold, silver, gemstones, and many others.

TIMELESS.

Even just select a wooden stock turns a hunting rifle into a one of a kind, because no two blanks cut from precious walnut wood are alike. You can select your personal favorite from these jewels, which were created by nature as long as 300 years ago. Ideally, you can visit the Blaser Custom Shop in Isny to view the extensive range, or make your selection online in the Stock Portal on the Blaser website.

PASSION & PERFORMANCE

FIRST CLASS.

But that is not all. We are breaking new ground once again and are offering more choices for technical aspects. Do you want to choose a barrel length that is perfectly adapted to your preferred ammunition? Do you want to optimize the performance with a specific twist rate? Or do you need a specific variant of the tried and tested Blaser saddle mount? All that is possible. We will be happy to advise you. Tune your hunting rifle to perfection. And, by the way – you do not need to be a competitive shooter to do this. Maybe you just want the best for yourself – and we can offer that.

UNIQUE.

First-rate workmanship combined with traditional gunsmith craft skills leave nothing to be desired and create your very own dream. No idea is impossible. Challenge us, and we can start our adventure together. We are looking forward to your ideas!

Yours sincerely,

Jann Ahrenholz,
Head of Custom Shop

A notice on our own behalf: Unfortunately, the legal frameworks do not always allow us to offer our innovative products worldwide. Rest assured, however, that we are keeping an eye on the markets and their regulations in order to offer access to our equipment to all customers as soon as possible.

OUR PASSION: THE HUNT

BORN OUT OF PASSION

Hunting may be one of mankind's most fundamental instincts, but in a modern world, we hunters must constantly adapt to new challenges. This is only possible through innovation and the people who drive this with passion.

FROM PARTNERSHIP

As a leading innovator, we are the driving force in the international hunting firearms industry. More than 60 years of experience have sharpened our senses for innovative technological advances while always remaining aware of our ethical obligations.

FROM ENTHUSIASM

Our Blaser employees share your enthusiasm for hunting and have a wide range of talents. We are proud of the diversity of personalities and skills, and the great collaboration that happens within the company to produce the finest hunting equipment.

OUR CLAIM: CREATING VALUES

MILLED FROM SOLID BLANKS

The manufacture of system parts from solid blanks gives you sound quality, reliability and durability. Labor-intensive manufacturing on the most modern CNC machines provides the basis for minimum tolerances and long-lasting shooting accuracy.

FROM HIGH-QUALITY MATERIALS

Highly tempered steel, forged light-metal alloys and precious walnut are brought together with artistic precision to create unique, exceptional objects. Every Blaser hunting firearm is an investment for future generations.

WITH A SENSE OF TRADITION

We characterize today's hunting culture with a sense of traditional craftsmanship. Highly qualified gunsmiths, stock makers and engravers make the firearm into a masterpiece that highlights the personality and passion of its owner.

OUR CONCLUSION: EVERYTHING FROM ONE SOURCE

Enthusiasm for the manufacturing of hunting firearms and the passion for hunting have shaped Blaser. From this, outstanding products and perfectly aligned overall solutions are born – and consistently extended and further developed – because successful hunting needs far more than just an excellent hunting firearm.

VALUABLE HUNTING OPTICS

For us, creating the perfect unit of rifle and scope has always been a passion. For our own optics development division in Wetzlar, we brought together the best of their trade. The result is hunting optics, that are unparalleled. This is exactly as riflescopes and binoculars should be in order to satisfy our customers.

ALIGNED EQUIPMENT

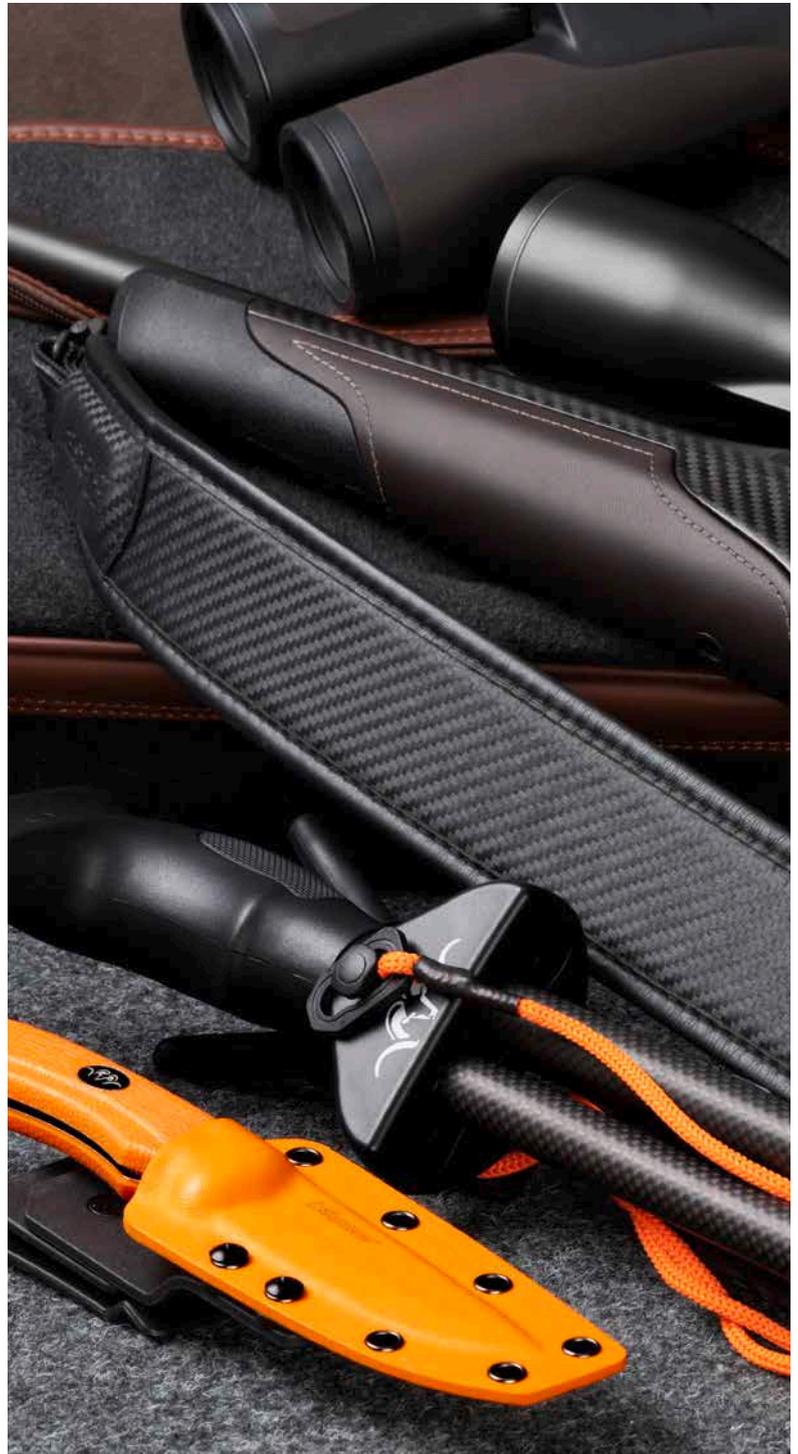

Everything from one source also means for us: high-performance rifle ammunition, essential equipment that is indispensable for hunting and premium clothing that is made for active hunting.

ATTRACTIVE HUNTING EXPERIENCES

Blaser also offers select hunting trips throughout the world, where highly professional outfitters do everything to fulfill the high demands of our customers to ensure an unforgettable hunting experience.

Experience Blaser digitally

Blaser is not only your analog hunting companion, but also your digital buddy. Configure the rifle of your dreams on the Blaser **website**. Or select your individual stock wood in the Blaser Stock Portal. Browse the new “**Online Gun Room**”, where we have selected exquisite Blaser Custom rifles for you. Discover the world of Blaser in moving images on YouTube or share your most beautiful Blaser moments with **#blaserfamily** on our social media channels. We look forward to seeing you!

OUR COMMITMENT: PRESERVING NATURE

A responsible attitude towards our natural habitat has always been an essential part of hunting. In today's cultural landscape, we hunters promote biodiversity and support the sustainable use of nature. For us at Blaser, economic activity and social responsibility are therefore just as closely linked as hunting and nature conservation. Only in this way can we make a meaningful contribution to safeguarding our environment for generations to come.

PROTECTING NATIVE WILDLIFE

As part of our wildlife protection project "Blaser Fawn Savers", we provide drones with thermal imaging cameras on loan to hunters, district hunting associations and hunting clubs throughout Europe to save fawns and other wild animals from a cruel mowing death.

CONSERVING SPECIES IN AFRICA

Rhinos are poached for their horns due to high worldwide demand. Blaser Safaris regularly makes great efforts in Namibia to protect white rhinos against poachers in order to preserve and increase their population.

CLIMATE-NEUTRAL MANUFACTURING

Blaser has been CO₂-neutral since 2021. To counteract climate change, the CO₂ emissions were offset with corresponding climate protection certificates.

SAVING RESOURCES

Sustainable production ideally saves energy and raw materials from the outset. For this reason, we use 3D printers in our production. Instead of reducing laboriously produced raw materials to the required shape in a milling or turning process, only as much material is consumed as is actually needed for the component. At the same time, the energy consumption of the individual component for the entire manufacturing process is reduced.

UPON YOUR

Request

Hunting has been mankind's passion since the beginning of time. In the Blaser Custom Shop, we bring together this passion and our craftsmanship to create the firearm of your dreams.

From a single embellishment to a fully engraved masterpiece – there are almost unlimited possibilities to express your personality. Get inspired!

Blaser

Custom

UNDER THE AFRICAN SUN

Silhouettes of African animals in the sunset – this is where master engraver Stefano Pedretti demonstrates his artistic skills. Rhino, lion, elephant, cape buffalo, zebra and leopard seem close enough to touch because of their photo-realistic visual representation in the classic Bulino style. The warm yellow tone made of solid fine gold underlines the unique lighting atmosphere. On the bolt housing and the bottom, sweeping arabesques and filigree gold inlays with bluing create an exciting interplay. A special eye-catcher is the bolt handle ball. Delicately engraved, it boasts gold inlays and impresses with its radiant, half-carat gemstone.

The highly polished barrel and the contrasting grade 11 root wood of the stock give this rifle an extraordinary frame.

R8 “THE SOUTHERN TRAPPER”

A full leathered homage to the southern states of the USA:
The leather that we use for the R8 “The Southern Trapper”
comes from the Alligator mississippiensis in South Carolina.

The animals are not bred on an alligator farm for leather production, but hunted sustainably in the wild. The hunting and closed season on the alligator is specified by the individual states themselves to prevent overpopulation. Every alligator leather we use in the Blaser Custom Shop has of course appropriate CITES documents.

The stock leathering is made with the so called back cut. This leaves the softer and finer belly leather of the alligator as a whole. Only this leather finds application in full leathering.

ALL IN LEATHER

Leather is a natural material that can be used in many ways. And with good reason, as even today it is in a league of its own in terms of durability and feel. So it's no wonder leather has established a solid position in the hunting rifle-sector, too.

Who hasn't experienced the pleasant feeling of running your fingers around your car's leather steering wheel? Who cannot appreciate the robustness of hand-made mountain boots or leather trousers that last for generations? So why not make the stocks of hunting rifles out of this elegant material, too? Especially as more and more hunters choose the technical superiority of synthetic stocks but also want a traditional look for their rifle. A whole range of leather types are perfect for this usage. Whether you opt for buffalo, red deer or even ostrich leather, each of their textures provide an extremely comfortable grip and their colors, an eminently attractive look. Top-quality English cowhide is used in the Blaser Custom Shop's newest creation. This material would otherwise mainly be used for exclusive saddles in equestrian sports. The fully leather-clad R8 Professional Success "Leather" becomes almost indestructible and extremely weatherproof, making it a coveted bolt action rifle for those who hunt on horseback and for all fans of unusual yet practical hunting rifles.

Covers for the stock are cut by hand out of extravagantly preprocessed English cowhide using templates.

The sewing of the stock's leather cover is done exclusively by hand. Experience plus dexterity with leather, needles and thread are required here.

Simply combine one of the ten beautiful leather colors, with one of the five contrasting stitches according to your taste. If your desired color is not available – please contact us!

A SPLASH OF COLOR FOR THE FIELD

For those who prefer an individual and colorful design on their R8, Easy Custom also offers a wide range of leather and thread colors. Whether synthetic stock or precious root wood, transform your R8 Professional Success Leather, R8 Ultimate, R8 Success Leather or K95 Ultimate Leather in a unique eyecatcher!

Easy Custom
Discover now

R8 STINGER

The R8 Stinger not only captivates through its extravagant appearance, it also demonstrates in an exceptionally aesthetic way the possibilities of individualization our Easy Custom range offers you:

- carbon thumbhole stock with high-gloss finish
- rough brushed receiver and magazine made of aluminum with steel-gray coating
- R8 logo inlaid in chrome
- stock brace on the cheek piece with extra rough brushing and colored "R8 Stinger" lettering
- carbon wrapped fore-end tip
- trigger, bolt and bolt handle ball with DLC-coating

The crowning glory of this composition is the eponymous blue-gray tanned stingray leather with subsequent polishing.

Besides its elegant look, stingray leather surpasses all other types of leather by far in terms of its tear and friction resistance! The leather of the stingray used in the Blaser Custom Shop is a by-product of edible fish extraction and is therefore not subject to species protection.

Only the interaction of the single components creates an individual masterpiece. Let the R8 Stinger inspire you and create your dream firearm with Easy Custom!

Blaser R8 Selous with custom case-hardened steel receiver, custom case-hardened bolt handle ball, lettering inlaid in gold and gold-plated trigger.

EASY CUSTOM TECHNICAL COATINGS

From traditional to high tech: Besides classic engravings, we also offer numerous options of surface finishing – whether a high-gloss finish with Diamond-Like-Carbon coating on the trigger and bolt handle ball, the stylish custom case hardening in combination with elegant burl wood, or the exclusive coating of the receiver with a Ruthenium finish – one of the rarest precious metals in the world.

The following coatings are possible:

Steel: DLC (Diamond like Carbon), Ruthenium finish, custom case hardening, gold plating, titanium nitriding, plasma nitriding (brushed, blasted, polished, burnished)

Aluminum: DLC (Diamond like Carbon), Ruthenium finish, gold plating, anodizing (gold colored, steel gray, black, gray)

Old German arabesques on the bolt housing and magazine unit, fully engraved

EASY CUSTOM BOLT HOUSING AND MAGAZINE UNIT

Oak leaves, old German arabesques or English Scroll – partially or fully engraved: Our selection of Easy Custom engravings which is always available at short notice offers you six different options that will give your R8 Success, R8 Professional Success or R8 Ultimate a personal touch.

EASY CUSTOM BOLT HANDLE BALL

Whether steel with engraved checkering, argali, rosette or fine gold thread and details laid in gold, a custom bolt handle ball stylishly completes the look of any R8.

EASY CUSTOM BARREL BASE ENGRAVING

With or without gold inlay, partially or fully engraved – the barrel base can also be refined with oak leaves, old German arabesques or English Scroll.

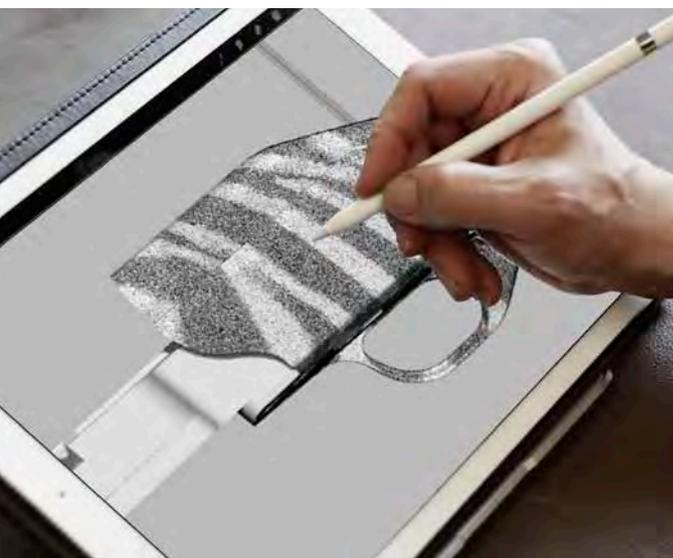

LASER ENGRAVINGS OF THE THIRD DIMENSION

It is a machine that was not actually developed for the manufacturing of hunting firearms, but for the automotive industry, that is used today to create highly individual laser engravings that are unparalleled in terms of detail and depth.

The removal of different layers not only creates depth in the image, but also the extraordinary feel of the processed parts. In the process, we are always pushing the limits – the tiny, razor-sharp elements that the laser engraves are sometimes only up to 1 mm thick.

Manual labor is nevertheless required for laser engraving. In the Blaser Custom Shop, master engraver Ralph Salzmann prepares and creates the image files for the laser by hand. This is done in initial sketches quite traditionally with paper and pencil, and later they are digitized on the drawing tablet.

In doing so, even relief-like representations are possible now. However, Ralph Salzmann has to "think" his way into every engraving from scratch in order to be able to create the different depths digitally. This is where his more than 20 years of experience as an engraver come in handy: he knows exactly what the engraving has to look like in the end.

Before production can begin, the image file must be prepared for the laser. To do this, it is divided into the three layers: Background, dithering (rasterization into dots) and grayscale. This usually takes much longer than the production on the machine itself.

From sculpted lion head to portrait photo of a dog up to textured alligator skin and geometric shapes: Laser technology can be used to reproduce anything that can be created digitally. Motifs become possible that previously would have been very time-intensive and difficult for the engraver to realize and with a very high time and thus very expensive for the customer.

In the Blaser Custom Shop, we are excited about the new possibilities that laser technology presents for the refinement of hunting rifles.

This R8 with grid structure sets state-of-the-art laser engraving in elegant harmony, here combined with fine walnut wood in wood grade 10.

DRAWN BY HAND. MATERIALIZED WITH LASER.

Ralph Salzmann (Master Engraver)

He comes from Suhl in Thuringia, the home of the world's finest gunsmiths. As a child, he dreamed of becoming a magician but his father made an engraver out of him. Ralph Salzmann is the artisan who, under contract with Jesse G. James, engraved Albrecht Dürer's Praying Hands onto Brad Pitt's pistol. Ralph Salzmann is artisan and hand craftsman, advisor and spin doctor, illustrator and perfectionist. He is only satisfied when, with only a few strokes, he has given the impression that he has engraved thousands of blades of grass from the African veldt onto a bolt housing. He has mastered the art of reductionism. He has done this for the last 20 years, and during this time he has developed a distinctive style that is recognizable to experts in the field. He is the man for endowing almost magical emotions to the firearm. Could it be that, in his own way, he really has become a magician?

BLASER PERFORMANCE CENTER

It is here, where precision, quality and performance enhancement perfectly interlock with the core skills of our experienced gunsmiths to provide you as a hunter or long-range shooter with the ultimate shooting experience.

Every Blaser rifle stands for exceptional precision. In the newly created Blaser Performance Center, we take this precision to the extreme and go one step further in enhancing the performance of your Blaser rifle.

With the expertise of our gunsmiths, their tireless care and technical skill, we elevate your firearm to a new level of performance.

We also work closely with our experienced developers to provide you with the highest degree of customization.

In addition to technical optimizations, such as lapping, special muzzle shapes, different twist rates or mounts, special materials or special attachments are also used here, which are manufactured specifically according to your wishes and requirements in prototype construction.

Enter a new dimension of personalization and enjoy the outstanding performance of your customized Blaser hunting rifle – true to our claim: Traditions of tomorrow!

Any adaptation of the muzzle has direct impact on the bullet due to the different diversion of pressure gasses.

LAPPING

At Blaser, we are always striving to push the boundaries of precision. The already outstanding inherent accuracy of Blaser hammered barrels is perfected by manual lapping. This special technique makes it possible to eliminate tiny irregularities and microstructures that are barely visible even to the naked eye. By carefully polishing and smoothing the barrel, we create a near-perfect internal surface.

The effects on the shot grouping are impressive. The lapping process creates exceptional uniformity of the bullet trajectory while minimizing the shot groups. By lapping the rifle's barrel we go to a remarkably new level. The famous thumbnail as a measure of shot group can now also be achieved with calibers and bullets that were previously limited with factory loads.

If you are looking for the ultimate shooting experience while offering you unsurpassed accuracy, a Blaser rifle barrel lapped with the highest precision is essential.

MUZZLES

Different muzzle shapes or attachments, such as a muzzle brake, affect recoil, shooting accuracy and overall performance of the firearm.

An effective muzzle shape, such as a tapered muzzle, or a muzzle brake can reduce recoil, resulting in improved stability and accuracy when shooting. Muzzle rise and barrel oscillation are minimized by selectively diverting gases or altering the ejection pattern of the projectile.

Furthermore, the shape of the muzzle can also affect shooting accuracy. For example, a well-designed muzzle can reduce swirl or turbulence in the airflow at the end of the barrel, resulting in a more stable trajectory of the projectile. This, in turn, allows for more accurate hits and smaller shot groups.

For the precision-oriented shooter, it is important to understand the various muzzle designs and their effects in order to make the optimal choice for his or her individual needs. Carefully matching the muzzle to the rifle can improve overall performance and provide an outstanding shooting experience.

The Performance Center offers further optimization of your Blaser barrel with various muzzle designs specifically designed for accuracy and performance

SPECIAL ADDITIONS

Whether it is special stock attachments, a modified comb or other custom-made enhancements, the Blaser Performance Center will turn your ideas into reality. Prototyping allows us to ensure that each custom part fits perfectly on your Blaser rifle and offers the overall highest quality.

Rely on the expertise and dedication of our gunsmiths and have peace of mind knowing that your rifle will not only be technically optimized, but will also receive custom special additions tailored to your exact needs.

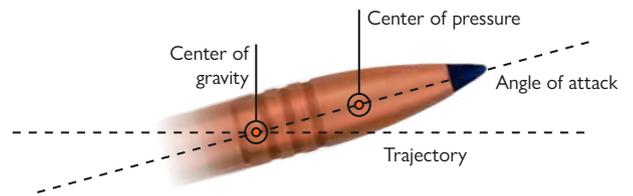

Modified forend to allow a multitude of adaptations.

TWIST RATES

The twist rate of a hunting rifle plays a decisive role in the effect and precision of a bullet. As a customer of the Blaser Performance Center, you have the option of selecting a barrel with a special twist to further optimize the shooting performance of your Blaser rifle. This option offers numerous advantages for both lead-free and leaded bullets in terms of their effect and precision.

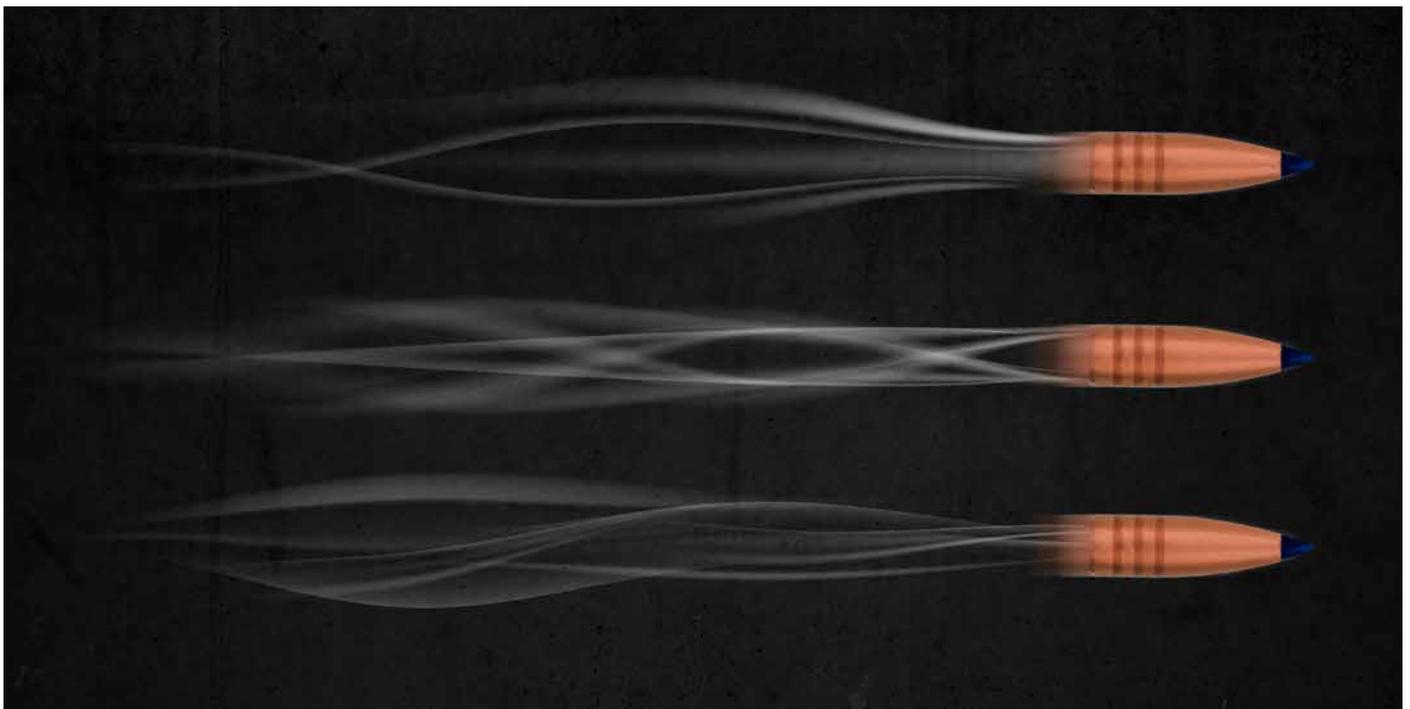

A barrel with a special twist can improve the ballistic properties of different bullets. For lead-free bullets, which often have a different shape or weight distribution, an adjusted twist can make the bullet fly more stable and accurately. This maximizes energy transfer and impact on game.

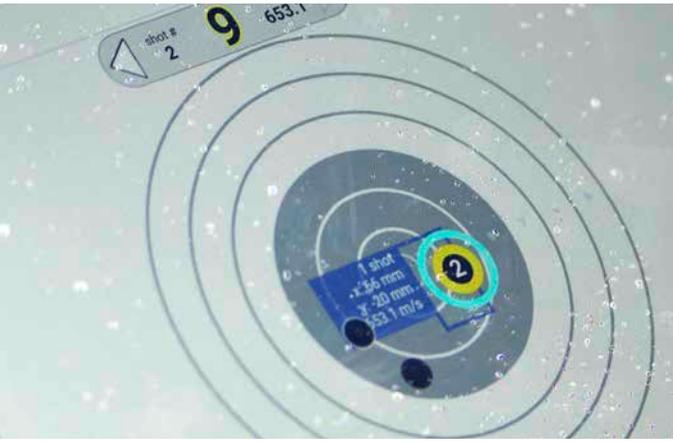

A custom twist rate can also increase the precision of leaded bullets. Optimal rotation of the bullet minimizes shot groups, resulting in improved accuracy. An adjusted twist rate also allows more efficient use of the bullet's kinetic energy, which increases stopping effectiveness during hunting.

Every hunter has different requirements for his or her equipment, whether in terms of the bullet used or the desired accuracy. Choosing a barrel with a special twist rate from the Blaser Performance Center allows you to tailor your hunting rifle exactly to your individual needs and preferences.

Different twist rates have direct impact on the stability and precision of a bullet

Detailed analysis for key-performance indicators.

MOUNTS

Discover the benefits of a scope mount matched to a specific caliber and why an inclination may be necessary to stay within the scope elevation adjustment range at long ranges.

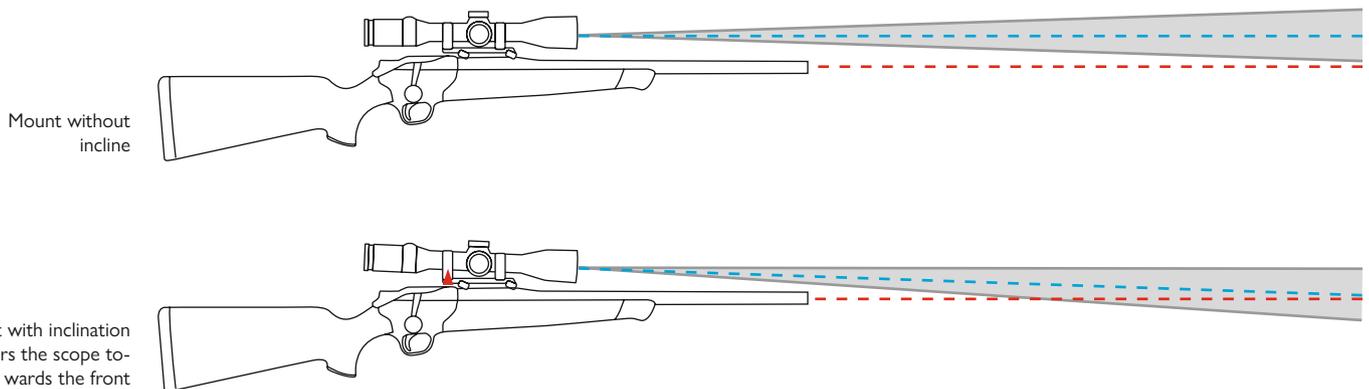

For accurate target acquisition at long ranges, it is critical that your rifle scope has a sufficient range of elevation adjustment. This allows you to adjust the trajectory of your ammunition accordingly and achieve hits at varying distances.

In some cases, however, the adjustment range of your riflescope may not be sufficient to make the necessary adjustment for extreme ranges. This is where a riflescope mount tuned to a specific caliber comes into play.

An angle corrected scope mount allows you to increase the tilt angle of the scope. This adjustment expands the effective range of elevation adjustment and allows you to stay within the adjustment range of your scope – even at extreme distances – for precise shots without compromising in accuracy.

A scope mount tuned to a specific caliber is an absolute must for hunters and long-range shooters who shoot at long distances. With this optimized mounting solution, you can realize the full potential of your riflescope and take the accuracy of your shots to a new level.

Let us know your requirements for a Blaser saddle mount which will give you the confidence at the highest level, even at the most challenging shooting distances.

SPECIAL MATERIALS

Special materials can also play a decisive role in further enhancing firearm performance.

At Blaser, we rely on advanced materials such as titanium and forged carbon, whose unique properties allow for significant improvements in terms of weight reduction, stability and rigidity.

An outstanding example of the use of such materials is the Blaser R8 Ultimate Carbon Leather. This exceptional rifle was created as a result of a special customer requirement. By using carbon, the weight of the rifle could be significantly reduced without compromising in stability and precision. The result is a unique combination of ultimate performance and aesthetic brilliance.

STOCK WOODS

Imagine not only being able to choose from an impressive selection of walnut stocks online in the Blaser stock portal, but also live on site in the stock selection showroom of the Blaser Custom Shop.

Here you have the unique opportunity to hold your own piece of wood in your hands, feel its grain and grasp the beauty of the material with all your senses. A moment of connection that will forever bind you and your future firearm.

This magic only unfolds in the stock selection showroom. Your trusted Blaser dealer will be happy to work with us to arrange a visit for you and make your choice on the spot. This day will become an unforgettable experience that goes far beyond just stock selection. You will be part of a fascinating factory tour, where you will be able to experience first-hand how our modern machinery and our highly qualified colleagues work with passion and precision to create your Blaser rifle.

A look behind the scenes.

Discover the Blaser world.

End your unforgettable day at the Blaser Custom Shop with a visit to our training center. Here you will have the opportunity to put your rifle through its paces in a realistic environment. Improve your shooting skills and discover the full potential of your custom Blaser rifle.

The Blaser Custom Shop is a place where your individual wishes and dreams take shape. This is where a rifle is created that not only meets the highest standards and also reflects your own personality. We understand that getting there is more than just a purchase – it's a journey we take together.

Contact your Blaser dealer and let them know that you would like to combine your visit to the stock selection showroom with a factory tour and a session at our training center. Together with our colleagues in Isny, we will make sure you have an unforgettable day at Blaser.

R8

A HUNTING RIFLE THAT IS UNIQUE IN EVERY WAY

Just as diverse as hunting, so are the demands hunters place on their rifles. To say the R8 is just a bolt action rifle is the understatement of the century. More than just a rifle it is a platform that allows you the flexibility to interchange calibers while providing ergonomic perfection in stock design and unequalled trigger performance.

ACCURATE.

Blaser Precision Trigger

The desmodromic trigger mechanism guarantees your trigger will function even when iced or heavily soiled. The mechanical advantage of a simple lever will ensure success even in the harshest conditions. When things are going your way a trigger without creep, will turn that thought impulse into action.

Blaser Saddle Mount

Barrel and Saddle Mount form one accurate unit: Notches machined into the top of the barrel, directly above the chamber, insure while your barrel freely floats your point of impact remains constant.

Optimum Barrel Bedding

The large-scale bedding of the barrel exclusively in the solid receiver guarantees repeatable accuracy when exchanging the barrel.

Blaser Radial Locking System

Stability and reliable accuracy: The extremely strong, concentric locking system locks directly in the barrel without any rotary motion. 14 locking surfaces provide 360 degree engagement.

Forged Barrel and Chamber

Precision and durability: The barrel and chamber are cold hammer forged. Barrel and chamber are perfectly concentric.

Perfect Stock Design

The relaxed shooting position of the hand reduces the risk of flinching. Blaser stocks, with their distinct palm swell and optimal cast, provide the ideal grip. The thumbhole stocks of the R8 Success and R8 Ultimate models go even further: thanks to a completely relaxed wrist and arm posture, shooting accuracy is significantly enhanced in any firing position.

SAFE

Manual Cocking System

For decades, Blaser's manual cocking system has set the benchmark. It is acknowledged as one of the safest in the world. There is no mechanical safety system that guarantees the safety of an uncocked firing spring. The R8 is cocked the very moment before shooting. Should the shot not be taken, by simply pressing down on the cocking lever, it will slide back smoothly, decocking the rifle.

Protection Against Misuse

If the R8 magazine with integrated trigger guard is taken out, the cocking lever cannot be set in the cocked position. This is without doubt the safest protection against unauthorized use!

No Unintentional Bolt Opening

If the R8 is decocked with a locked bolt, the bolt handle is blocked. To safely open the bolt, the cocking lever needs to be moved slightly forward (approx. 3mm / 1/8"), but not cocked, while simultaneously pulling back on the bolt handle.

**ACCURATE.
SAFE.
HUNTABLE.
RELIABLE.**

HUNTABLE

Short Cut

The unique design of the R8 magazine above the trigger allows the overall length of the R8 to be significantly shorter than any conventional bolt action rifle.

Perfect Balance

The well-balanced weight distribution offers fast handling and quick target acquisition.

Easy Take-Down

More comfort when stalking over long distances: the R8 can be stripped down, packed away and reassembled in a matter of seconds without the slightest change in the point of impact.

RELIABLE

Quick Take Down – Easily Cleaned

Even when in the bush, the R8 can be taken down and reassembled within a few seconds. Snow, dirt, leaves or needles are easily removed.

Desmodromic Trigger Mechanism

Maximum reliability – even when iced or heavily soiled. The trigger system of the R8 is force-controlled. Cycling the bolt automatically resets the trigger.

Locked Magazine

The R8 magazine is only released when simultaneously pressing both release buttons. Accidental drop out of the magazine by unintentionally pushing the release buttons is thus virtually impossible. In addition, both release buttons can be locked by a lever inside the magazine.

Excellently Protected

The closed construction of the R8 receiver prevents damage caused by foreign objects. When the magazine is stored outside the rifle, a protective cover keeps the dirt out. All metal parts are either made of rustproof material or protected against corrosion with a specific finish. The inside of the barrel and chamber are polished and need conventional care.

VERSATILE

Around the World with One Rifle

Trigger, stock length, and handling – everything remains just the way you are used to: Thanks to spare barrels, the R8 is the ideal companion on all continents no matter what game you are hunting.

Quick Scope Change

Every barrel is prepared for the Original Blaser Saddle Mount, so each scope or illuminated dot sight that is zeroed to the barrel can be interchanged.

Changing Stocks

If you are expecting bad weather or rugged terrain, the precious wooden stock can be removed and replaced with the R8 Ultimate stocks.

For Left-Hand Shooters

Most R8 models are available as a true left-hand version including stock, bolt assembly and ejection.

FAST

In-line Repeating

Fast as lightning with a relaxed posture: The bolt handle is located in an ergonomically perfect position, just above the trigger guard. Rifle and eye remain focused on the target giving more time to aim exactly and ensure a perfect shot.

“Blind” Magazine Exchange

Easy and fast: The magazine buttons can be operated “blindly” due to their perfect positioning above the trigger. When pushing on both buttons at the same time, the magazine releases straight into the shooter’s hand. A second, loaded magazine can be inserted extremely quickly without looking.

Double Loading Option

The R8 can be loaded and unloaded in two ways: with the magazine taken out or left inside the rifle. With an open bolt, cartridges can be inserted or removed from the top of the magazine very quickly and easily.

INDIVIDUAL

The Blaser R8 as a True Left-handed Version

For perfect precision, every hunter needs a perfect companion: the Blaser R8 is more than just a rifle – it is a legend. This is the reason why we optimized the bolt-action rifle R8 for left-handed shooters.

The result: Almost every model of the Blaser R8 is now available as a true left-hand version: with a left handed bolt assembly, left-handed bolt and left hand ejection. The ergonomic stock is available as a standard or as a success stock – either wooden or synthetic – and has also been specially adapted for left-handed shooters.

For shooters who like a maximum of flexibility, we offer the R8 Professional also with double palmwell – an ambidextrous option with a locking mechanism on the left and on the right.

COMPACT SOLUTION FOR LADIES:

R8 Intuition

Features a purpose-built stock which takes into account the anatomy of women.

VERSATILE.

Blaser

R8 ULTIMATE SILVERSTONE STYLE MEETS SPEED

The R8 Ultimate Silverstone is an homage to the legendary Formula 1 racetrack in England. It embodies our passion for state-of-the-art technology and perfection – characteristics that equally apply to motorsports.

The R8 Ultimate Silverstone with optional muzzle thread, scope Blaser B1 4-20x58 iC and mount

R8 ULTIMATE SILVERSTONE

Speed, precision and design in the style of British understatement. First appearance at Silverstone: James Littlejohn, racing driver, driving coach, and member of the elite British Racing Drivers' Club, presents the R8 Ultimate Silverstone on the start-finish straight. Given his passion for classic sports cars and modern high-performance vehicles, the rifle has convinced the enthusiastic hunter at the shooting range and on the hunt.

Features

- Ultimate stock in black with adjustable comb
- Silver-gray receiver with matt brushed finish and Argali logo
- Fluted barrel profile including shortened barrel with muzzle thread
- Alternatively available with Silence barrel with integrated silencer
- Trigger, bolt handle ball and bolt in "diamond-like-carbon"
- Anthracite suede leather inlays with silver-gray contrast stitching
- Leather-covered recoil pad
- Pistol grip cap in silver-gray with "R8 Silverstone" lettering

Available calibers

- 52 cm: .308 Win., 8 x 57 IS, 9.3 x 62
- Semi Weight 52 cm: 8,5 x 55 Blaser
- 58 cm: .30-06 Spring., 6.5 Creedmoor
- 65 cm: .300 Win. Mag., 7 mm Rem. Mag.
- Silence 42 cm: .308 Win.
- Silence 47 cm: 8,5 x 55 Blaser

R8 ULTIMATE ROSÉ LADIES STYLE

Maximum performance with a touch of feminine design:
The R8 Ultimate Rosé is the rifle for female hunters who prefer understated elegance and confident styling.

The R8 Ultimate Rosé with optional muzzle thread, scope Blaser B1 2.8–20x50 iC and mount

Features

- Ultimate stock in black with adjustable comb
- Shortened barrel with muzzle thread
- Alternatively available with Silence barrel with integrated silencer
- Bolt handle ball: steel with knurled profile and flower
- Rose-color Argali logo on the receiver
- Anthracite suede leather inlays with rose-color contrast stitching
- Black pistol grip cap with rose-color “Ladies Edition” lettering with arabesque filling
- Compact recoil pad (350mm)
- High-quality custom rifle sling made of anthracite suede leather with rose-color contrast stitching

Available calibers

52 cm: .308 Win., 8 x 57 IS, 9.3 x 62
Semi Weight 52 cm: 8,5 x 55 Blaser
58 cm: .30-06 Spring., 6.5 Creedmoor
65 cm: .300 Win. Mag., 7 mm Rem. Mag.
Silence 42 cm: .308 Win.
Silence 47 cm: 8,5 x 55 Blaser

R8 ULTIMATE MONZA

Optimized performance comes first – even away from the race track. The R8 Ultimate Monza not only provides accurate shooting, but also captivates the imagination with its unusual design.

- Ultimate stock in black with adjustable comb
- Stock color black
- Impregnated leather inlays and recoil pad in black with red contrast stitching
- Black anodized aluminum stock inlay with red lettering
- Trigger guard, bolt handle ball and bolt head DLC coated

! R8 ULTIMATE

The R8 Ultimate sets a new standard in terms of functionality and design. The two-piece ergonomically designed thumbhole stock ensures a completely relaxed shooting position, as well as optimal control of the rifle when firing.

Thanks to the modular stock options, the R8 Ultimate and the R8 Ultimate Silence are exactly tailored to your individual needs. All of these options support our goal: to provide what is needed to shoot better in every situation.

- Ergonomically optimized synthetic thumbhole stock
- Stock color: black-brown with black elastomer inlays
- Available options include: adjustable comb, adjustable recoil pad, Compact recoil pad or recoil absorption system
- Optional with left-hand stock and bolt assembly

- impregnated leather inlays on fore-end, pistol grip and comb

The R8 Ultimate Leather with optional muzzle thread, recoil absorption system, scope Blaser B1 2.8–20x50 iC and mount

R8 ULTIMATE – HUNTEC CAMO

We bring your equipment for active hunting in challenging terrain up to the next level: with the new Blaser HunTec Camo. The camouflage pattern makes the R8 Ultimate – HunTec Camo a master of disguise. In combination with the Blaser HunTec clothing and accessory line, it demonstrates its full strength.

- Ergonomically optimized thumbhole stock
- HunTec camo synthetic stock with black elastomer inlays
- Available options include: adjustable comb, adjustable recoil pad, Compact recoil pad or recoil absorption system

Steep slopes and rugged rocks, heavy snow, different altitudes and vast woodlands – hunting in the mountains is demanding. It challenges both man and his gear. For me, it is as simple as that: I can rely on my R8 in any situation.

Otto Schratz,
Head Professional Hunter,
Hoefen, Austria

ULTRALIGHT

R8 ULTIMATE X

For the first time ever, a 10 round magazine complements the legendary bolt action rifle R8 with all its options. Training, competition, driven hunt – it is here where the R8 Ultimate X plays to its strengths. The bolt action rifle for those who want more: Experience Power x 10 – with the R8 Ultimate X!

The R8 Ultimate X provides one magazine each for standard and magnum calibers. Both hold 10 cartridges. A new component inserted between the buttstock and the receiver creates space for the extended magazine. Its clever design also makes it possible to use magazines with increased capacity as well as all existing magazine inserts of the R8. A bolt handle extension ensures that the bolt handle can be operated intuitively during fast repeating.

Perfect combination for training: The R8 Ultimate X with Blaser Saddle Mount and Picatinny rail as well as the new Blaser Ultimate BiPod.

The R8 Ultimate X with optional scope Blaser B2 2.5–15x56 iC and mount

R8 Ultimate X Leather

The same as the R8 Ultimate X, but includes:

- impregnated leather inlays on fore-end, pistol grip and comb

The R8 Ultimate X Leather with optional scope Blaser B1 2.8–20x50 iC and mount

R8 Ultimate X models available in the following calibers:

.223 Remington, .204 Ruger, .308 Winchester, 6.5 Creedmoor, 6XC, .243 Winchester, 6.5x55 SE, 8x57 IS, .30-06 Springfield, 9.3x62, .270 Winchester, 6,5x65 RWS, 7x64, .300 Winchester Magnum, 8.5x55 Blaser, .300 WSM, .270 WSM, 7mm Blaser Magnum, .338 Lapua Magnum, .300 Norma Magnum, 6.5 PRC

R8 PROFESSIONAL

The R8 Professional is designed for hard use: elastomer inlays support secure grip and aiming even in wet conditions. The specially developed recoil pad combines outstanding recoil reduction with excellent sliding characteristics.

- Synthetic stock with black elastomer grip inlays, available in dark green, savannah or black-brown
- Optional adjustable comb
- Optional with left-hand stock and bolt assembly

The R8 Professional, stock color black-brown with optional scope Blaser B1 1-7x28 iC and mount

R8 Professional Nachsuche

The same as the R8 Professional, but includes:

- short tracking barrel (50 cm / 19.7") and HIVIZ® quick acquisition sights
- retainers for sling swivels on the muzzle as well as on both sides of the stock

Stock color savannah

Stock color black-brown

The R8 Professional Nachsuche, stock color dark green

R8 SMALL CALIBER SET

The Blaser R8 is as versatile as hunting itself. With interchangeable sets in the calibers .17 HMR, .22 WMR, .22 l.r. / .22 lFB, .17 Hornet and .22 Hornet, you can now hunt small game or varmint with your favorite, large caliber bolt action rifle R8. And because of the lower prices for ammunition, you save costs when practising extensively at the shooting range.

The small caliber set includes R8 spare barrel, bolt head and magazine with a capacity of up to 6 cartridges.

R8 LUXUS MODELS

For Traditionalists

R8 Luxus

SOUND OF SILENCE OUR SILENCER SOLUTIONS

Every shot can cause irreparable damage to your hearing.

It is therefore advisable to wear suitable hearing protection at all times when shooting. Practical considerations when hunting means that this is not always possible. Using silencers represents the far better solution.

They provide less risk of hearing damage and the pain threshold of 130 dB at the ear is rarely reached. Moreover, silencers have a particularly positive effect on the shooting performance. Besides the muzzle report, a silencer also considerably reduces recoil which is a significant part of achieving better accuracy.

! R8 ULTIMATE SILENCE

- Overall barrel length 62.5 cm (24.6") (effective barrel length 42 cm (16.5"))
- Barrel jacket with integrated silencer, quickly and easily detachable
- Ergonomically optimized synthetic stock
- Black-brown synthetic stock with black elastomer inlays
- Available options include: adjustable comb, adjustable recoil pad, Compact recoil pad, or recoil absorption system
- Noise reduction approx. 28 dB (Cal. .308 Win.)

R8 SILENCE MODELS

The construction of the R8 Silence is designed to protect the hearing of both hunter and dog. At any time and with every shot. Thanks to the even weight distribution of the entire barrel, the R8 Silence models provide the first-class balance and huntability that you are used with every R8 model. The outer contour of the barrel and silencer jacket boasts a smooth bull barrel design, giving the R8 Silence models their low weight and an extremely attractive overall appearance.

The R8 Ultimate Carbon Silence Leather in caliber .30-06 (barrel length 47 cm) with optional scope Blaser B1 2.8–20x50 iC and mount

Baffle design and geometry is the heart of every silencer. It is largely responsible for reducing the recoil – and in combination with the large volume of the silencer – reducing the sound of the shot and protecting a shooter's hearing. For the Blaser Integral Silencer (ISD), the geometry was optimized to the maximum diameter – while still maintaining the overall aesthetic of the rifle itself.

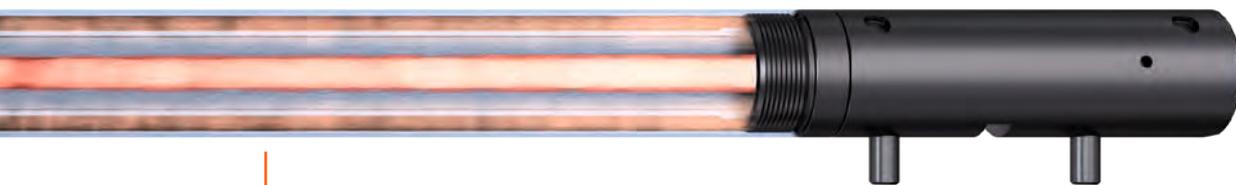

Within a fraction of a second – all the processes take place inside the silencer – which ensure recoil reduction and noise dampening when the shot is fired. As an example, with a barrel length of 42 cm (16.5") in .308 Win, the projectile emerges from the muzzle at a velocity of 750 m/s. It passes completely through the length of the Integral Silencer in just 0.27 milliseconds.

The muzzle brake deflects a part of the gases rearward, in an evenly dispersed fashion. Like the outer tube, the muzzle brake is made of titanium, which ensures minimum weight and optimum durability. It is also responsible for ensuring that the Blaser Integral Silencer can be properly attached to the muzzle thread of the barrel. This allows the bullet to pass through the silencer without obstruction. With this high-strength material and its precise manufacturing – the problems with bullet striations and the resulting change in the point of impact are now a thing of the past.

The Silence models are available in following calibers

- Cal. .308 Win.; 8x57 IS; 9.3x62; barrel lengths 42 cm or 47 cm (16.5" or 18.5")
- Cal. 8.5x55 Blaser; 30-06; barrel length 47 cm (18.5")
- Cal. .300 Win. Mag.; .300 Blaser Mag.; barrel length 52 cm (20.5")

Cross-section of barrel with integral silencer

The innovative design of the Blaser Integral Silencer allows for use of the entire length of the silencer as an expansion space for the powder gases – while maintaining its slim overall appearance. The inner tube of the Blaser Integral Silencer (ISD) contains and closes off the expansion chamber and keeps the gases from contacting the surface of the barrel itself. The barrel always remains clean and is reliably protected against powder residues, contamination and corrosive residues.

R8 ULTIMATE – EQUIPMENT OPTIONS

Adjustable Comb

The intuitively operated, multi-level adjustable comb ensures the perfect mount in every situation. Once the adjustable comb is fitted to

your individual body proportions and your optics, the integrated memory function ensures return to the correct comb position for every shot.

Recoil Absorption System

The inserted recoil pad with recoil absorption system makes for a pleasant shooting experience – even with larger calibers. The internal absorption elements are available in different hardness which can be adjusted to your preferences and produce a noticeably reduced muzzle climb while shooting. The recoil absorption system, especially in combination with the R8 Ultimate Silence or another silencer option, offers unmatched comfort while shooting.

Adjustable Recoil Pad

The adjustable length, height and pitch of the recoil pad offers a variety of practical advantages. It can be adjusted quickly

and easily for different shooters or, depending on weather, different clothing situations.

Compact Recoil Pad

The Compact recoil pad reduces the length of the Ultimate stock to only 350 mm. This allows the Ultimate models to be adapted even more individually to your own needs.

Briefly explained
See the video

R8 SILENCE

- Overall barrel length 62.5 cm (24.6") (effective barrel length 42 cm (16.5"))
- Barrel jacket with integrated silencer, quickly and easily detachable
- Matt black receiver
- Butt stock with Bavarian cheek piece and double rabbet
- Grade 4 wood
- Rubber recoil pad
- Ebony fore-end tip
- Optional with left-hand stock and bolt assembly
- Noise reduction approx. 28 dB (Cal. .308 Win.)

ic illumination

BLASER SILENCER

Blaser On-Barrel Silencer

Blaser's On-Barrel Silencer is designed to meet the requirements and needs of hunters. It is threaded onto the barrel forward of the front sight. Thanks to the silencer's slim design you are still able to shoot using your open sights. Aerospace grade aluminum alloy combined with titanium insure the Blaser On-Barrel Silencer is one of the lightest on the market and still offers an outstanding service life.

Versions

Total length 203.1 mm
Real extension 188 mm
Barrel overhang 15 mm
Weight 325 g for Cal. .30
Noise reduction 27 dB (C)
for Cal. .308 Win.

Every R8 and K95 can optionally be factory fitted and retro-fitted with the required muzzle thread for the silencer. Please note all barrels with sights require the front sight to be set back approximately 17 mm / 0.67".

It is also suggested to use a thread protector cap when the silencer is not installed.

Blaser Over-Barrel Silencer

The Blaser Over-Barrel Silencer is the ideal solution when short overall length is required. The combination of a special aluminum alloy and steel ensures it is lightweight while still having a long service life.

It should be taken into account that the Blaser Over-Barrel Silencer can only be mounted on barrels without open sights. For retrofitting a muzzle thread with cover, the front sight must be removed.

for Cal. 308 Win.

The correct hunting strategy needs to be decisive. It yields much more than constant hunting pressure. The R8 is the perfect rifle above all, due to its short receiver length, when using a silencer. This is the ideal combination to support me while hunting because it doesn't interfere with the game and is entirely in line with ethical hunting.

Sepp Rinner,
Professional Hunter, Aschau/Chiemgau, Germany

27 Mounting Options

8 Mounting Bases
From 4.2 to 16 millimeters height

100% RETURN TO ZERO. RELIABLE. ACCURATE.

Every Blaser rifle or combination gun can be fitted with an original Blaser Saddle Mount. After being zeroed in once, the riflescope can be removed and replaced in just three steps, with no need for tools, as often as desired, with 100% return to zero. This allows you the flexibility to use different scopes on the same barrel.

Four inconspicuous notches on the chamber end of the barrel secure the one-piece mount without tension. The barrel itself is totally free floating. No further work is required on the firearm, and there is no need for large mount bases that can interfere with your sight picture or the look of the rifle.

1 | The Blaser Saddle Mount is placed in the notches on the barrel with the locking levers open.

2 | No tools are needed to rotate the locking levers into position. This releases the tension on the mount lock on the barrel. To prevent the locking levers interfering with the use of the rifle, they are folded inwards.

3 | The riflescope is properly positioned and ready for zeroing. The Blaser Saddle Mount can be removed and replaced as often as you wish, with no need to re-zero.

BLASER B1 PRECISION TO PERFECTION

For highest possible shooting accuracy under all conditions, advanced-technical solutions are required. This applies not only to firearm and scope mount, but also to the riflescopes themselves.

The design of the Blaser B1 line of precision riflescopes is the consistent continuation of this philosophy.

Due to their special design, riflescopes with reticles in the first focal plane deliver accurate point of impact on any magnification setting.

The result: precision to perfection!

OUR PRECISION OPTICS: FOR BETTER SHOOTING

Only in combination with top-class riflescopes can hunters use the potential of their rifle to the fullest. Therefore it is even more important that the function and handling of the optics are perfectly matched to the use in the field. If the design of the riflescope is then optimally aligned with the firearm, the result is a combination of unparalleled elegance and performance.

UNMATCHED PRECISION

Since the days of William Tell, the Swiss have been recognized for their utmost precision. Thanks to innovative Swiss phase grating technology, the Blaser B1 riflescopes excel in the field with a low reticle subtension even on high magnifications. In combination with the daylight-visible illuminated dot that is adjustable to all light conditions, nothing stands between you and your precise shot.

MADE IN GERMANY

The Blaser B1 riflescopes stand for German Engineering perfection. Built and developed in Germany, they combine the highest quality, robust construction and perfect precision “Made in Germany” in one riflescope.

ROBUST FOR TOUGH USE

The body of the Blaser B1 riflescopes features a robust hard-anodized coating which makes it resistant to external influences. Drops and falls happen while hunting and the rugged illumination adjustment control and parallax adjustment turret are purposely designed to withstand hard use and avoid damage. Both operating elements are made of sturdy metal. The rubber coating in handy fish-scale chequered design ensures a safe grip even in wet conditions.

RETICLE IN THE FIRST FOCAL PLANE: PERFECTLY PRECISE

The Blaser B1 riflescopes stand for perfect precision. No wonder then, that we have consistently relied on reticles in the first focal plane when developing this line of riflescopes.

With riflescopes featuring a reticle in the first focal plane, the point of impact cannot be changed when switching magnification due to their special design. The reticle overlays the target image before the moving parts of the zoom system come into play.

Originally, reticles in the first focal plane were the benchmark for European premium riflescopes because of their more reliable construction. Then, with the development of illuminated reticles for daytime use, many manufacturers switched their reticle to the second focal plane. At the time, the luminous structures could not be made fine enough to be integrated into the first focal plane.

Thanks to Swiss phase grating technology it was possible to design very fine reticles in the first focal plane featuring a reticle illumination that is also suitable for daylight. A benefit that we at Blaser simply had to make use of – for a constant point of impact with any magnification: The shot hits precisely where expected!

Precise on Principle

Thanks to the reticle's position in the first focal plane, mechanical tolerances do not affect the point of impact when changing magnification.

Briefly explained
Reticle in the first focal plane and iC

SAFETY WITH LONG-DISTANCE SHOTS

While hunting, there are situations in which a long-range shot may become necessary. All well and good, when you are able to remain on target and don't have to hold over. The Quick Distance Control (QDC) was specially developed for this purpose. Its highly precise and extremely robust mechanics provide a consistently reliable return to zero.

The Blaser riflescopes B1 2.8–20x50iC and B1 4–20x58iC come with QDC Quick Distance Control as a standard feature. Before shooting over long distances, the corresponding elevation correction of the fast reticle adjustment can be done comfortably even when already in shooting position. A unique feature allows you to fix the two adjustments “zeroed” and shooter chosen impact point (4 cm high with a rifle that is zeroed at 100 m). This prevents an unintentional adjustment.

If, due to a long shooting distance, 4 cm high at 100 m should not be sufficient, the reticle elevation adjustment can be rotated further by the necessary “number of clicks”. In this case, the adjustment is not locked by lowering the adjustment turret, so that its previously selected adjustments remain clearly visible and reminds you to later set back to your “zeroed position”.

AUTOMATICALLY LOCKED

The adjustment turret for parallax is automatically locked for a distance of approximately 100m. Thus, it cannot be adjusted unintentionally. Before shooting at distances greater than 100 m, the adjustment turret is easily pulled out to select the desired distance.

EVEN MORE PRECISE ON TARGET WITH THE QDC⁺

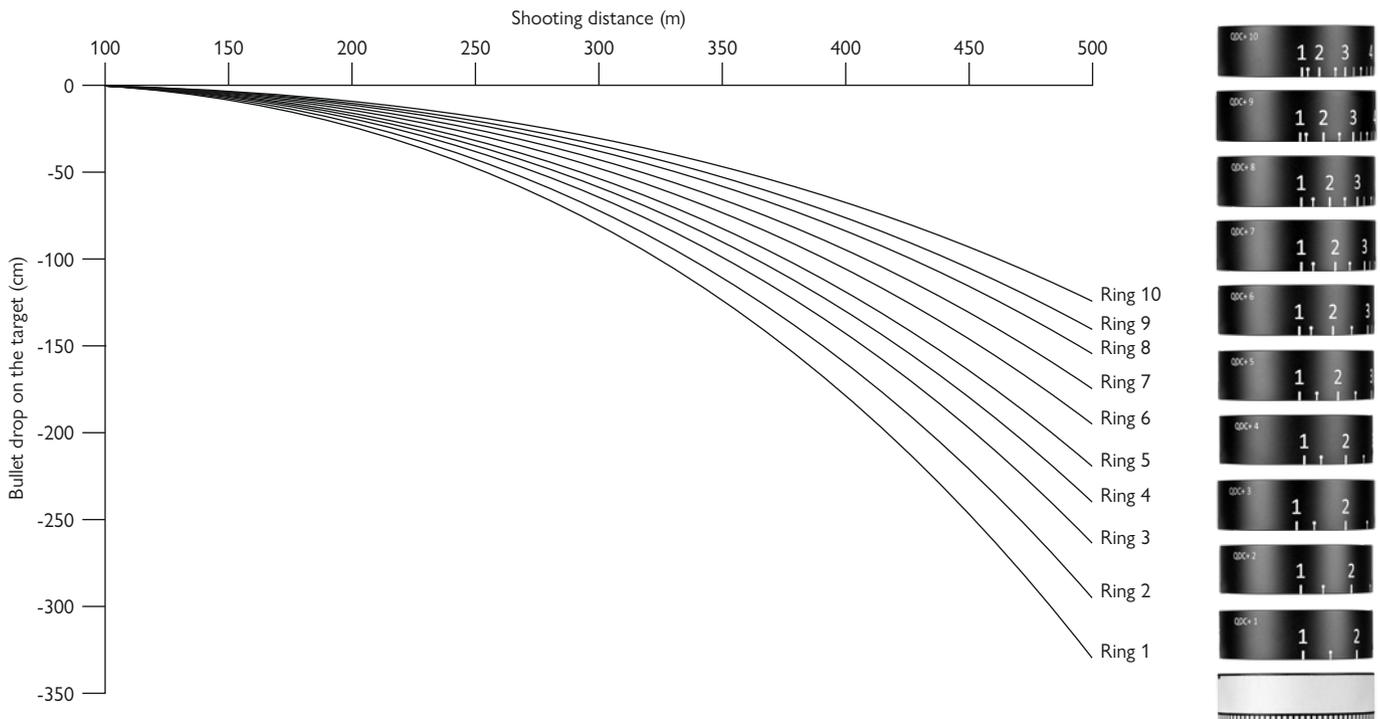

The optional Blaser Quick Distance Control ⁺ allows for adjusting the shooting distance up to a range of 500 m directly on the elevation turret of the Blaser B1 riflescope. For optimal adaptation to your own rifle, 10 interchangeable engraved rings are included, covering a wide range of hunting ammunition. Additionally, individual markings can be applied to a blank ring.

The Blaser QDC⁺ is optionally available for the riflescopes B1 2.8–20x50 iC and B1 4–20x58 iC and very easy to retrofit yourself.

Thanks to the Blaser ballistics calculator, the QDC⁺ ring that best matches your rifle and selected load can easily be determined online. Simply select your Blaser riflescope as well as your ammunition and the program calculates the trajectory and tells you the appropriate ring.

In order to achieve even more precise results, muzzle velocity, ballistic coefficient, scope height and environmental conditions can be customized.

THE BLASER BALLISTICS CALCULATOR

The ballistics calculator tells you the appropriate ring and provides a clear illustration of the trajectory.

Blaser ballistics calculator

AUTOMATIC ACTIVATION OF THE ILLUMINATED DOT – ILLUMINATION CONTROL

The cocking slide activates the illuminated dot – Illumination Control makes this possible with all R8 and K95 models

A sensor in the riflescope recognizes the position of the cocking slide and automatically regulates the switch-on/-off function of the illuminated dot. In order to prepare for the shot one single movement is enough. The illuminated dot's intensity then always corresponds to the intensity that was adjusted last. Its adjustment is comfortably done using the turret on the scope's right side. Thanks to this perfect interplay of rifle and scope you gain time and thus the necessary calmness for a safe shot.

To achieve the longest possible battery life, the illuminated dot automatically switches off as soon as the rifle is in a very steep to vertical or lying position. Once taking a shooting position again, the illuminated dot is automatically activated.

The Blaser Ocular Flip Cover activates the illuminated dot – for all rifles and combination guns without iC cocking slide

In combination with the optional Blaser Ocular Flip Cover with iC function, the ingenious design of the Blaser B1 riflescopes allow you to transfer the automatic activation of the illuminated dot to all firearm types and makes – simply through the magnet that is integrated in the Flip Cover: When opening the cover, the illuminated dot is automatically activated.

The Blaser Ocular Flip Cover with iC function: The magnet automatically activates the illuminated dot when opening the cover.

True 1x Magnification
Only with both eyes open, the shooter's peripheral vision can truly track game ensuring a safe shot. The Blaser 1-7x28 iC offers this benefit thanks to its true 1x magnification. Ideal for optimum overview and rapid target acquisition.

INTUITIVE TARGET ACQUISITION THANKS TO INTELLIGENT VARIABLE DOT

The Blaser B1 1-7x28 iC is state-of-the-art level performance additionally equipped with an Intelligent Variable Dot (IVD). Rough terrain, foul weather, and high levels of stress will put even the most experienced hunter to the test. The dual output feature of the illuminated dot is just the answer you have been searching for. At low power of magnification, 4x and lower, the illuminated dot is larger in size and ideal for fast moving game providing greater situational awareness and intuitive target acquisition. The IVD's dot intensity can also be adjusted by a side-mounted turret.

Above 4x magnification the dot size is automatically reduced for accurate shot placement over long distances. Precise dot resolution is essential for target identification and shot placement. The dot intensity can also be adjusted by a side-mounted turret. Whether bright sun, reflective snow or deep twilight, as soon as the game comes into sight, target acquisition is intuitive.

Blaser B1 1-7x28iC
magnification 2x

Blaser B1 1-7x28iC
magnification 7x

BLASER B1 1–7x28iC

The Intelligent One

Technical specifications

Exit pupil diameter: 10 mm–4 mm

Field of view at 100 m: 40,8 m–6,0 m

Eye relief: 90 mm (3.5")

Transmission: > 90 % night / > 92 % day

Parallax compensation: 100 m fix

Elevation adjustment at 100 m: ± 180 cm

Windage adjustment at 100 m: ± 180 cm

Adjustment per click: 1 cm / 100 m

Weight: 645 g (22,75 oz)

Overall length: 319 mm (12.5")

Outer diameter eyepiece: 45 mm (1.77")

The comfortable eye relief of 90 mm minimizes the risk of recoil induced eye injuries on big bore rifles. The Intelligent Variable Dot IVD is an invaluable feature when hunting dangerous game – aiding with instant target acquisition when approaching quickly.

Thanks to the 28 mm objective lens, the Blaser B1 1–7x28iC is perfectly usable even in twilight, which makes it a versatile riflescope for worldwide hunting on all seven continents.

- IVD (Intelligent Variable Dot), automatically activated illuminated dot for driven hunts
- True 1x magnification
- Very large field of view of more than 40 m
- Large exit pupil of 10 mm with 1x for rapid target acquisition
- Large zoom range for universal use
- 28 mm lens diameter enables a 7x magnification with an exit pupil of 4 mm. This enhances the field of application with poor lighting conditions

Briefly explained
See the video

BLASER B1 2.8–20x50iC

The All-rounder

Compact performance – whether mountain hunting, stalking or sitting for game, the B1 2.8–20x50iC captivates with compact size and range.

- Universal magnification range
- Elegant and compact, only 343 mm overall length
- 20x magnification allows you to clearly and safely identify game and acquire targets at long ranges.

Technical specifications

Exit pupil diameter: 10 mm–2,5 mm

Field of view at 100 m: 13,2 m–1,9 m

Eye relief: 90 mm (3.5")

Transmission: >90 % night / >92 % day

Parallax compensation: 50 m to infinity, 100 m arresting

Elevation adjustment at 100 m: ±230 cm

Elevation adjustment with QDC at 100 m: 80 cm

Windage adjustment at 100 m: ±90 cm

Adjustment per click: 1 cm/100 m

Weight: 770 g (27.16 oz)

Overall length: 343 mm (13.5")

Outer diameter objective lens: 56 mm (2.2")

Outer diameter eyepiece: 45 mm (1.77")

Briefly explained
See the video

Compact and Powerful

20x maximum magnification and bright 50 mm objective lens merge into an extremely compact construction.

Thanks to the one-of-a-kind design, rifle and scope result in a harmonious overall appearance.

58 mm Objective Lens Diameter

Compared to riflescopes featuring a 56 mm objective lens diameter, 58 mm provides an additional light yield of 7%. This allows use of a higher magnification with better detail recognition in deep twilight or at night.

BLASER B1 4–20x58iC

The Light Giant

The twilight specialist – superior for sitting game and when hunting in the very last light. Excellent light gathering characteristics far exceed what other scopes provide in low light conditions. Making the impossible long-range shot possible.

- High contrast and optimal sharpness of detail, especially in the last light
- 58 mm lens diameter means more than 7% additional light yield compared to a 56 mm lens
- 20x magnification allows you to clearly and safely identify game and acquire targets at long ranges.

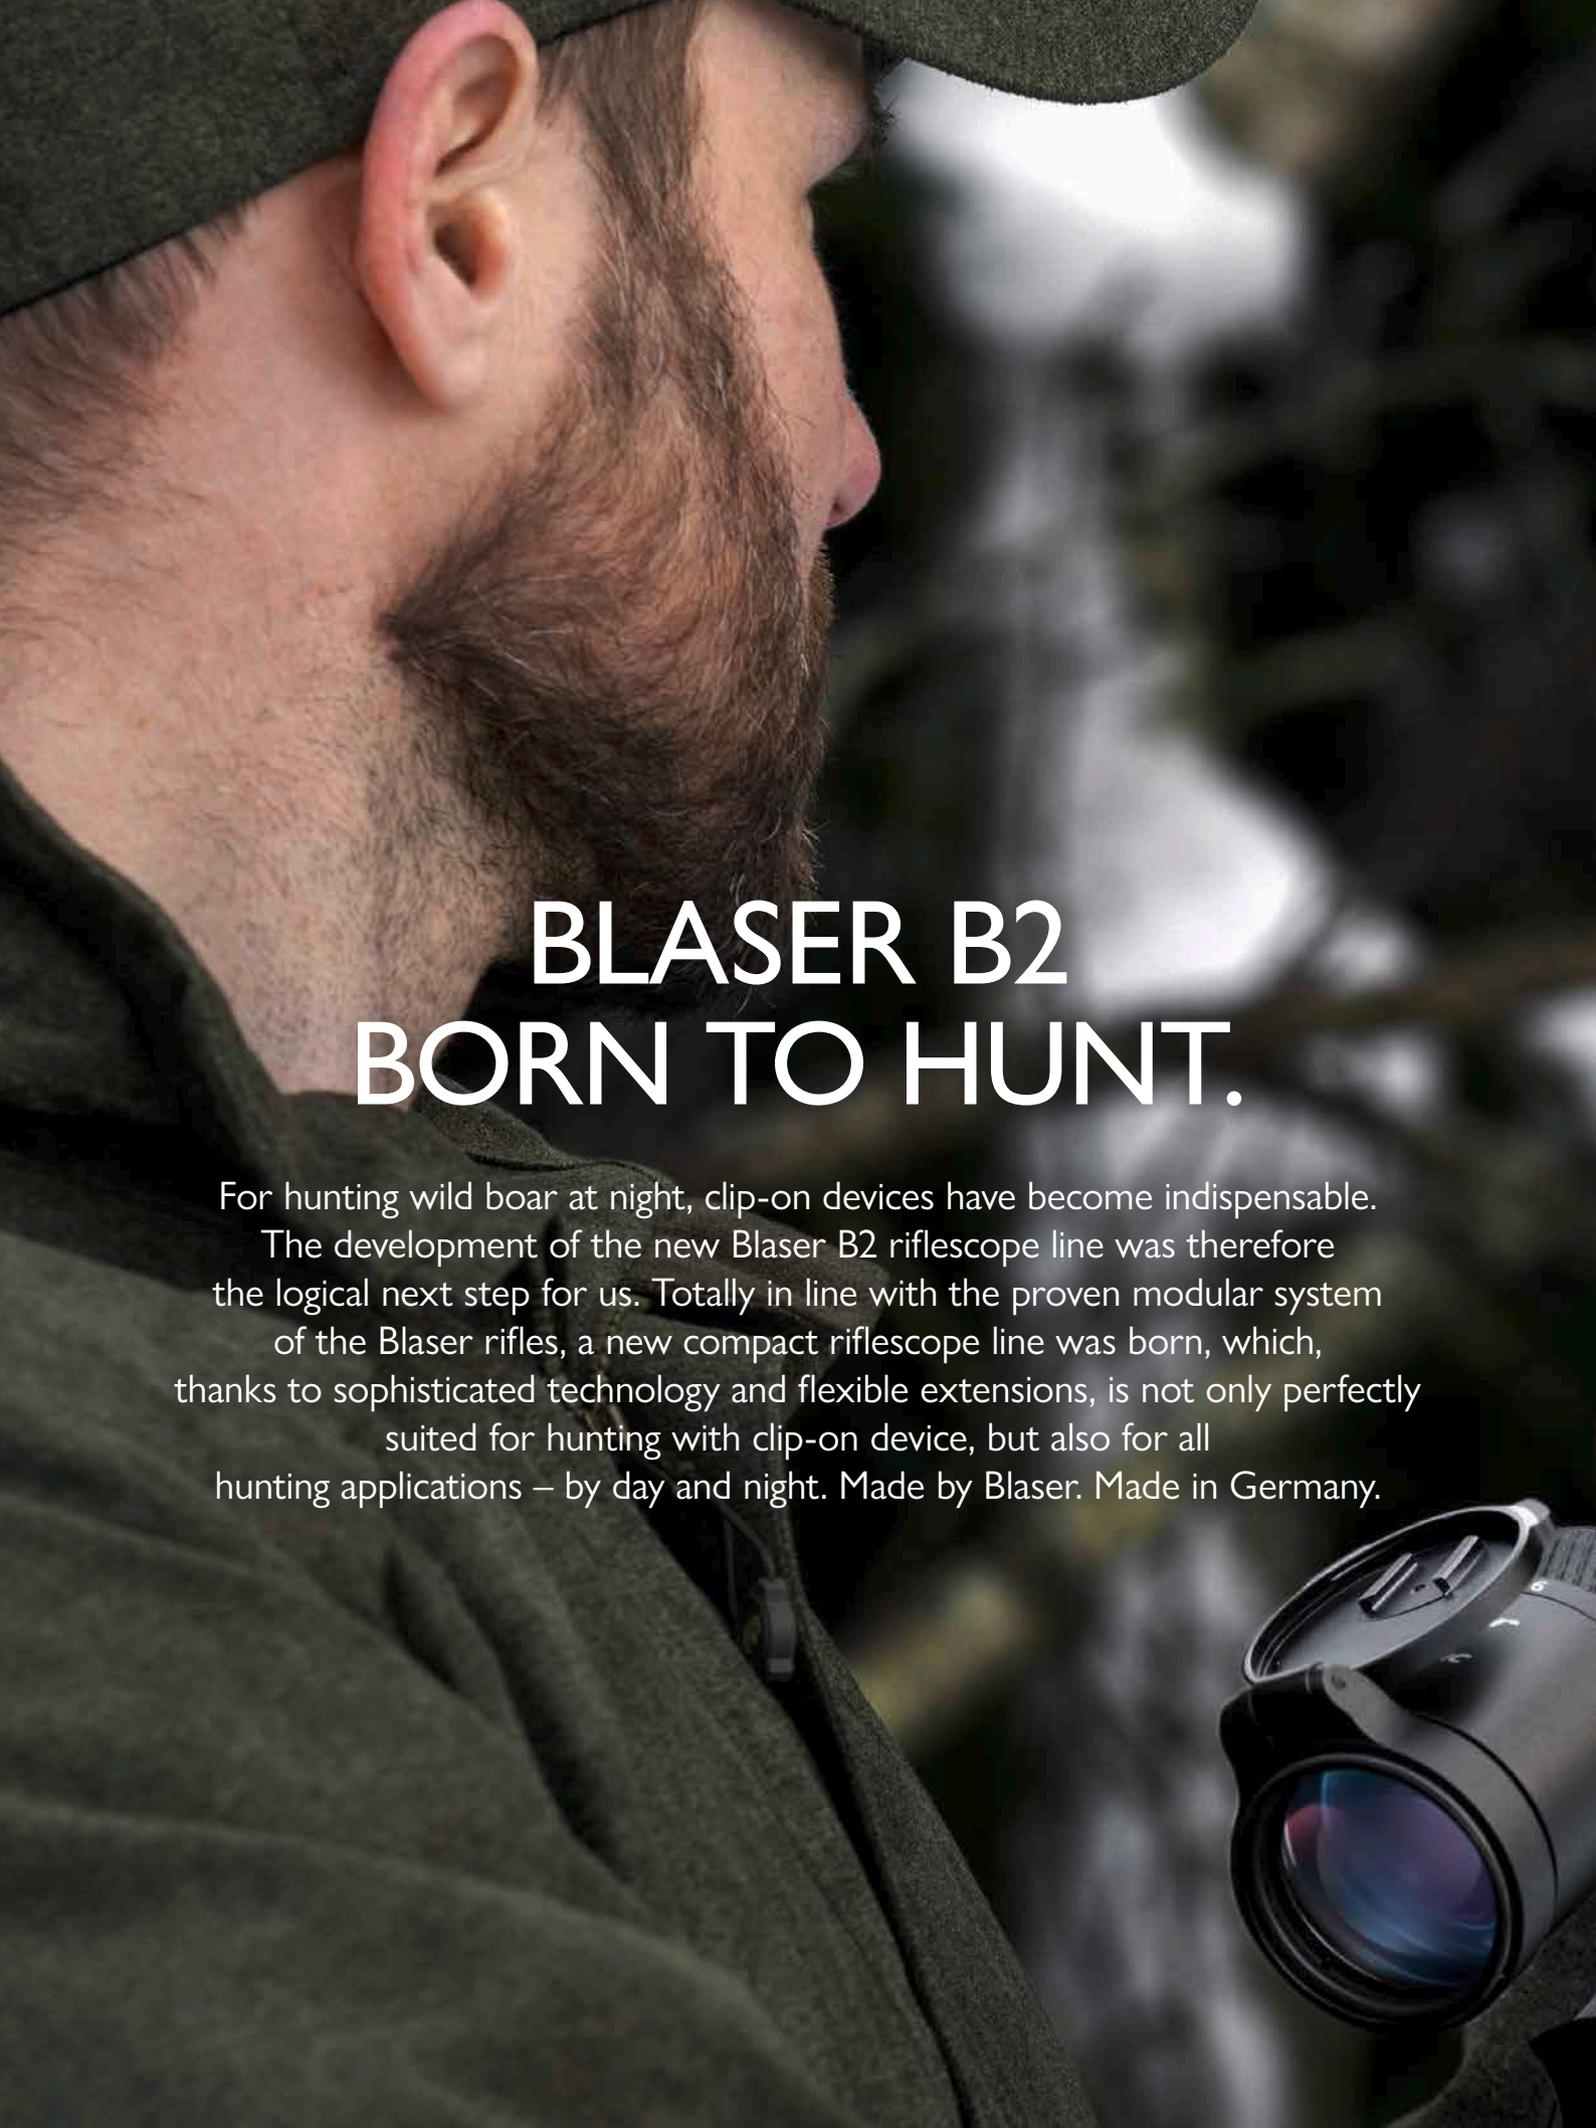

Technical specifications

Exit pupil diameter: 12,3 mm–2,9 mm
 Field of view at 100 m: 9,2 m–1,9 m
 Eye relief: 90 mm (3.5")
 Transmission: >90 % night / >92 % day
 Parallaxausgleich: 50 m to infinity, 100 m arresting
 Elevation adjustment at 100 m: ± 75 cm
 Elevation adjustment with QDC at 100 m: 80 cm*
 Windage adjustment at 100 m: ± 50 cm
 Adjustment per click: 1 cm / 100 m
 Weight: 885 g (31.22 oz)
 Overall length: 365 mm (14.37")
 Outer diameter objective lens: 64,5 mm (2.5")
 Outer diameter eyepiece: 45 mm (1.77")

*when using the 0.2° forward inclined Blaser Mount.

Briefly explained
 See the video

A close-up, profile view of a man with a beard and a dark cap, looking through a Blaser B2 rifle scope. The background is dark and blurred, suggesting a night hunting environment. The scope is visible in the bottom right corner, showing its lens and body.

BLASER B2 BORN TO HUNT.

For hunting wild boar at night, clip-on devices have become indispensable. The development of the new Blaser B2 riflescope line was therefore the logical next step for us. Totally in line with the proven modular system of the Blaser rifles, a new compact riflescope line was born, which, thanks to sophisticated technology and flexible extensions, is not only perfectly suited for hunting with clip-on device, but also for all hunting applications – by day and night. Made by Blaser. Made in Germany.

FOR TOTAL CONTROL ON LONG DISTANCES. BLASER QDC⁺

When hunting, a long-distance shot may become necessary from time to time – thanks to the QDC⁺ fast reticle adjustment, you are able to remain on target and do not have to aim higher or lower.

The optional Blaser Quick Distance Control⁺ allows you to adjust the shooting distance up to a range of 500 m directly on the elevation turret of your Blaser B2 riflescope. For optimal adaptation to your own rifle, 10 interchangeable engraved rings are included, covering a wide range of hunting ammunition. Additionally, individual markings can be applied to a blank ring.

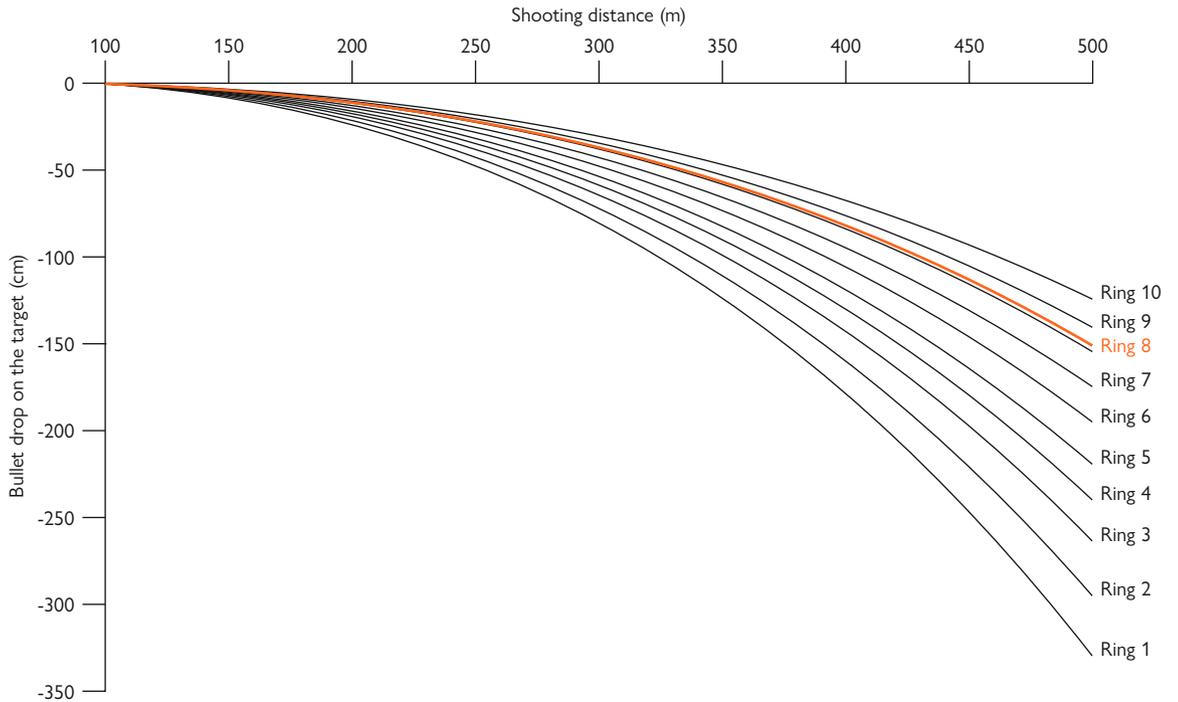

You can additionally lock the elevation turret at the zero position and at 4 clicks high (recommended zero range). This prevents unintentional adjustment and the locked position ensures a clean shot at common hunting distances.

The Blaser QDC⁺ is optionally available for the models B2 1.7–10x42 iC, B2 2–12x50 iC and B2 2.5–15x56 iC and very easy to retrofit yourself.

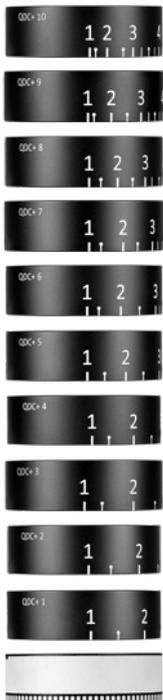

THE BLASER BALLISTICS CALCULATOR

The ballistics calculator tells you the appropriate ring and provides a clear illustration of the trajectory.

Selected Load

Caliber: 8,5x55 Blaser
 Bullet: Barnes TTSX 10,4 g / 160 gr
 Ballistic coefficient: 0,344
 Muzzle velocity: 940 m/s

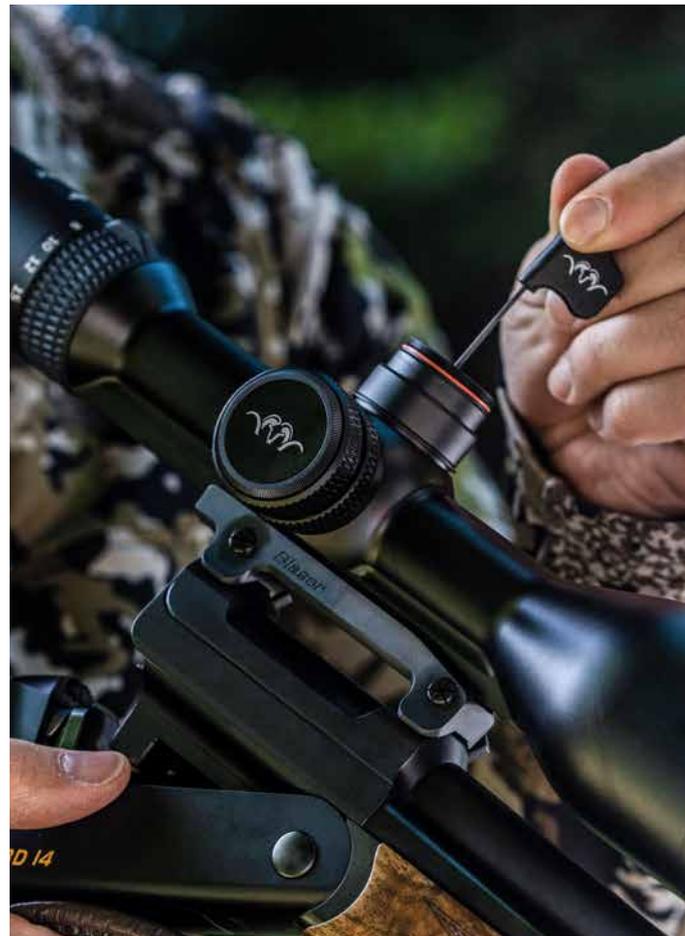

With the Blaser ballistics online calculator, you can easily determine the QDC+ ring that best matches your rifle and selected load.

Simply select your Blaser riflescope as well as your ammunition and the program calculates the trajectory and tells you the appropriate ring.

In order to achieve even more precise results, muzzle velocity, ballistic coefficient, scope height and environmental conditions can be customized.

Test now!
 Blaser Ballistics Calculator

ROBUST CONSTRUCTION. COMPACT LENGTH. FOR NIGHTTIME HUNTING.

With an overall length that is up to four centimeters shorter than comparable scopes, the Blaser B2 riflescopes are extremely compact. When hunting, this short overall length ensures that a clip-on device can be comfortably operated from the shooting position and that the rifle's center of gravity is not shifted forward unnecessarily.

Another advantage of the compact design is the short range of motion of the zoom system's movable lenses which results in improved mechanical precision and a more stable point of impact when changing magnification. At the same time, the mechanical robustness compensates for the additional stress on the scope when shooting with a clip-on device. In combination with the easy-to-mount, absolutely repeatable attachment mounts and the corresponding clip-on device, the Blaser B2 riflescopes become true night-hunting specialists.

Designed from the ground up for use with clip-on technology, the Blaser B2 riflescopes have undergone the same shock resistance tests that are standard for testing premium riflescopes – and all B2 models passed with flying colors.

The matching attachment mounts for a quick, easy and repeatable connection of the riflescope and the clip-on device can be found on the following pages.

Features

- 6x zoom
- Optimized for clip-on devices – compact and robust
- Fine, daylight bright illuminated reticle (fiber optics) in the second focal plane
- 94 / 92% day- / night transmission
- Smart Lens Protection (SLP) – hydrophobic lens coating
- 30 mm main tube / inner rail optionally
- Parallax adjustment, with tactile click at 100 m (only with B2 2.5–15x56 iC)
- Continuously variable adjustment of the illumination intensity
- Rubberized magnification ring
- 90mm eye relief
- Nitrogen purged, waterproof to 4 m
- Made in Germany

BLASER B2 FOR ALL HUNTING APPLICATIONS.

THE BLASER B2 MODELS

BLASER B2 1–6x24 iC

Driven hunt / Stalking + Night hunting with clip-on device

The true 1x magnification provides an image impression that is identical to that of the naked eye and thus allows for extremely fast target acquisition.

- Compatible with Flip Cover iC Ocular
- Compatible with Blaser BL Attachment Mount

Technical Specifications

Exit pupil diameter: 9,8 mm–4 mm

Field of view at 100 m: 40 m–6,7 m

Eye relief: 90 mm (3.54")

Parallax compensation: 100 m fixed

Elevation adjustment at 100 m: ±150 cm

Windage adjustment at 100 m: ±150 cm

Adjustment per click: 1 cm/100 m

Weight without/with inner rail : 590/615 g (20.81/21.69 oz)

Overall length: 273 mm (10.75")

Outer diameter objective lens: 30 mm (1.18")

Outer diameter eyepiece: 46 mm (1.81")

NEW

BLASER B2 1.7–10x42 iC

Driven hunt /Stalking / High seat + Night hunting with clip-on device

Lightweight and powerful: Versatile and powerful: extremely compact design with an overall length of only 315 mm

- Compatible with Flip Cover iC Ocular
- Compatible with Blaser CM attachment mount

Technical Specifications

Exit pupil diameter: 9,8 mm – 4,2 mm

Field of view at 100 m: 24m – 4 m

Eye relief: 90 mm (3.54")

Parallax compensation: 100 m fixed

Elevation adjustment at 100 m: ±145 cm

Windage adjustment at 100 m: ±145 cm

Adjustment per click: 1 cm / 100 m

Weight without / with inner rail: 680 / 700 g (23.99 / 24.69 oz)

Overall length: 315 mm (12.40")

Outer diameter objective lens: 48 mm (1.89")

Outer diameter eyepiece: 46 mm (1.81")

Elevation adjustment with QDC*: 80 cm / 100 m

BLASER B2 2–12x50 iC

Stalking / High seat + Night hunting with clip-on device

The all-round riflescope for all hunting applications and therefore ideal as initial equipment.

- Compatible with Flip Cover iC Ocular and Flip Cover Objective Lens
- Compatible with Blaser CM attachment mount

Technical Specifications

Exit pupil diameter: 9,8 mm–4 mm

Field of view at 100 m: 20 m–3,3 m

Eye relief: 90 mm (3.54")

Parallax compensation: 100 m fixed

Windage adjustment at 100 m: ±125 cm

Elevation adjustment at 100 m: ±125 cm

Adjustment per click: 1 cm/100 m

Weight without / with inner rail: 735/760 g (25.93/26.81 oz)

Overall length: 330 mm (13")

Outer diameter objective lens: 56 mm (3.54")

Outer diameter eyepiece: 46 mm (1.81")

Elevation adjustment with QDC*: 80 cm/100 m

BLASER B2 2.5–15x56 iC

High seat / Long-range shooting + Night hunting with clip-on device

The 15x magnification eases shots at long distances. When used without a clip-on device, the high twilight performance ensures a safe shot even very late in the evening or very early in the morning.

- Compatible with Flip Cover iC Ocular and Flip Cover Objective Lens
- Compatible with Blaser CM attachment mount
- Parallax compensation, with tactile click at 100 m

Technical Specifications

Exit pupil diameter: 9,8 mm–3,7 mm

Field of view at 100 m: 16 m–2,6 m

Eye relief: 90 mm (3.54")

Parallax compensation: 50 m–∞

Elevation adjustment at 100 m: ±125 cm

Windage adjustment at 100 m: ±60 cm

Adjustment per click: 1 cm/100 m

Weight without / with inner rail: 800/825 g (28.22/29.10 oz)

Overall length: 327 mm (12.87")

Outer diameter objective lens: 62 mm (2.44")

Outer diameter eyepiece: 46 mm (1.81")

Elevation adjustment with QDC*: 80 cm/100 m

BLASER ATTACHMENT MOUNTS FOR NIGHT HUNTING

When hunting wild boar at night, the reliable connection of riflescope and thermal clip-on device is crucial for a consistent and repeatable point of impact. For this very purpose, we offer various perfectly aligned solutions consisting of high-precision Blaser daylight riflescopes and innovative attachment mounts with first-class thermal imaging optics.

EASY. FAST. 100% RETURN TO ZERO.

Even under rough hunting conditions, the riflescope and clip-on device can be connected quickly and easily in just a few steps – with 100% repeatability. The Blaser CM und BL attachment mounts turn both optics into one precise unit.

Blaser CM Attachment Mounts – CM 48, CM 56, CM 62, CM 64.5

- Attachment mounts suitable for B1 2.8–20x50 iC, B1 4–20x58 iC and B2 1.7–10x42 iC, B2 2–12x50 iC as well as B2 2.5–15x56 iC
- Compatible with Blaser Objective Flip Cover
- Secured against rotation (aligned to the Flip Cover)
- Easily clamped into place

Use case 01:

The riflescope is used without Blaser B2 Objective Lens Flip Cover, but with Blaser CM attachment mount and clip-on device – the cover is left in the Blaser CM attachment mount.

Use case 02:

The riflescope is used with Blaser B2 Objective Lens Flip Cover, Blaser CM attachment mount and clip-on device – the cover must be removed, so that the Blaser CM attachment mount can be slid on for a perfect fit.

Riflescope Blaser B1 1-7x28iC, Blaser B1 attachment mount BL43 and LIEMKE thermal clip-on device LUCHS-1

Riflescope Blaser B2 1-6x24iC, Blaser B2 attachment mount BL 30 and LIEMKE thermal clip-on device MERLIN-13

LIEMKE thermal clip-on device LUCHS-2 with Blaser B1 attachment mount BL 43

LIEMKE thermal clip-on device MERLIN-13 with Blaser B1 attachment mount BL 30

Blaser B1 attachment mount BL 52

PRECISELY CONNECTED

With their ideal magnification range for hunting wild boar and the mounting rail extended to the front of the riflescope, the Blaser B1 1–7x28 iC and B2 1–6x24 iC S are the perfect platform on which to use thermal clip-on devices.

Thanks to the automatic positioning and alignment of the attachment mount based on the integrated rail, the installation is always repeatable, even in complete darkness.

Blaser BL Attachment Mounts – BL 30, BL 43, BL 52

- Attachment mounts suitable for B1 1–7x28 iC and B2 1–6x24 iC S (with rail)
- Available versions:
 BL 30: M30x1 for LIEMKE MERLIN–13
 BL 43: M43x0,75 for LIEMKE LUCHS–1 and LUCHS–2
 BL 52: M52x0,75
- Secured against rotation, locked against being pulled off to the front and clamped into place

The Blaser attachment mounts BL 30 (M30x1 Gewinde) and BL 43 (M43x0,75 thread) are predestined for the use with the LIEMKE thermal-imaging clip-on devices LUCHS–1, LUCHS–2 and MERLIN–13. Using thermal clip-on devices of other manufacturers with M30x1, M43x0,75 or M52x0,75 thread usually is also possible.

BLASER RED DOT SIGHT: SHOOT WITH OPEN EYES

BLASER RD20

BETTER SIGHT PICTURE – BETTER HITS

The Blaser RD20 is a red dot sight specially developed for Blaser rifles to provide a better sight picture for quick shots. It is characterized by a unique combination of large inside diameter and minimal target blockage by the housing. The original Blaser Saddle Mount is seamlessly integrated into the aluminum housing which results in a sleek and compact appearance with a lower overall weight.

The RD20 is the ideal optic for quick shots on driven hunts and as an interchangeable accessory for all Blaser rifles, making it the ideal addition to a riflescope.

- Better sight picture: 36 mm diameter with only 3.5 mm coverage by the housing wall
- In all kinds of weather: Scratch-resistant protective lenses that sit almost flush with the housing: easy to clean from water drops, snow and debris
- Always ready: With the IIC function, the RD20 features an energy saving concept with intelligent switch-off functions and thus enables a service life of up to 50,000 hours

IIC – Intelligent Illumination Control

When carrying the rifle muzzle up or down, or with the rifle in a resting position on the hunting stand, the red dot switches off automatically. It is activated again immediately when raising the rifle. Six hours after the last button operation, the RD20 switches off, making manual switch-off of the sight at the end of the day optional. This energy saving concept provides a battery life of up to 50,000 hours.

Inside diameter: 36 mm (1.42")
Diameter of red dot: 2 MOA resp. 58 mm / 100 m
Magnification: 1x (no magnification)
Parallax free distance: 50 m
Adjustment range elevation / windage: 300 cm / 100 m
Adjustment per click: 2 cm / 100 m resp. 1 cm / 50 m
Length x Width x Height: 98 x 44 x 66 mm (3.86" x 1.73" x 2.60")
Weight: 195 g (6.88 oz)
Waterproof: 0,4 bar / 4 m water depth
Battery life: up to 50,000 hours
Illumination settings: 30 levels, continuously dimmable
Operating temperature: -25°C to +50°C
Shut-off functions: IIC function

BLASER BINOCULARS FOR HUNTING'S HIGHEST DEMANDS

Nowhere else are binoculars used so intensively and under such varying conditions as when hunting.

As enthusiastic hunters, we know this firsthand and have developed first-class optics that are completely tailored to the requirements of hunting.

AN IMMEDIATE VIBRANT IMAGE FOR MAXIMUM VIEWING COMFORT

To achieve the best view, even in imperfect conditions, we have developed a completely new optical calculation and combined this with the largest eyepiece lenses possible for each model. This delivers significantly faster image acquisition and a particularly comfortable visual experience in any situation – even if the binoculars are not in the optimum position in relation to your eyes.

PERFORMANCE WITH INTELLIGENT PROTECTION

Superior light transmission, neutral color reproduction and brilliant, high-contrast images are a must for long-range optics used for hunting. Our CCC multiple layer coating (Contrast and Color Corrective Coating) ensures first-class image performance in any light conditions.

Just as important as optical quality is the protection of the outer lenses. The SLP coating (Smart Lens Protection) is based on nanotechnology and ensures water and dust protection. It also allows for rain to run off and makes cleaning the lenses significantly easier.

IT DOES NOT GET ANY EASIER: REMOVE AND CLEAN

Dust or fine sand can damage both the lens surface as well as the precision mechanics of the adjustable eye cups.

With our binoculars, the eye cups can be removed quickly and easily thanks to a newly developed technical solution. This also allows for a gentle cleaning at any time.

BLASER 8x56

King of the Night

First-class performance when hunting game in deep twilight and at night.

BLASER 8x42

Universal Genius

Compact universal binoculars for any hunting situation.

BLASER 10x42

Distance Specialist

Ideal for hunting in the mountains or on open ground – enables you to identify detail even at great distances.

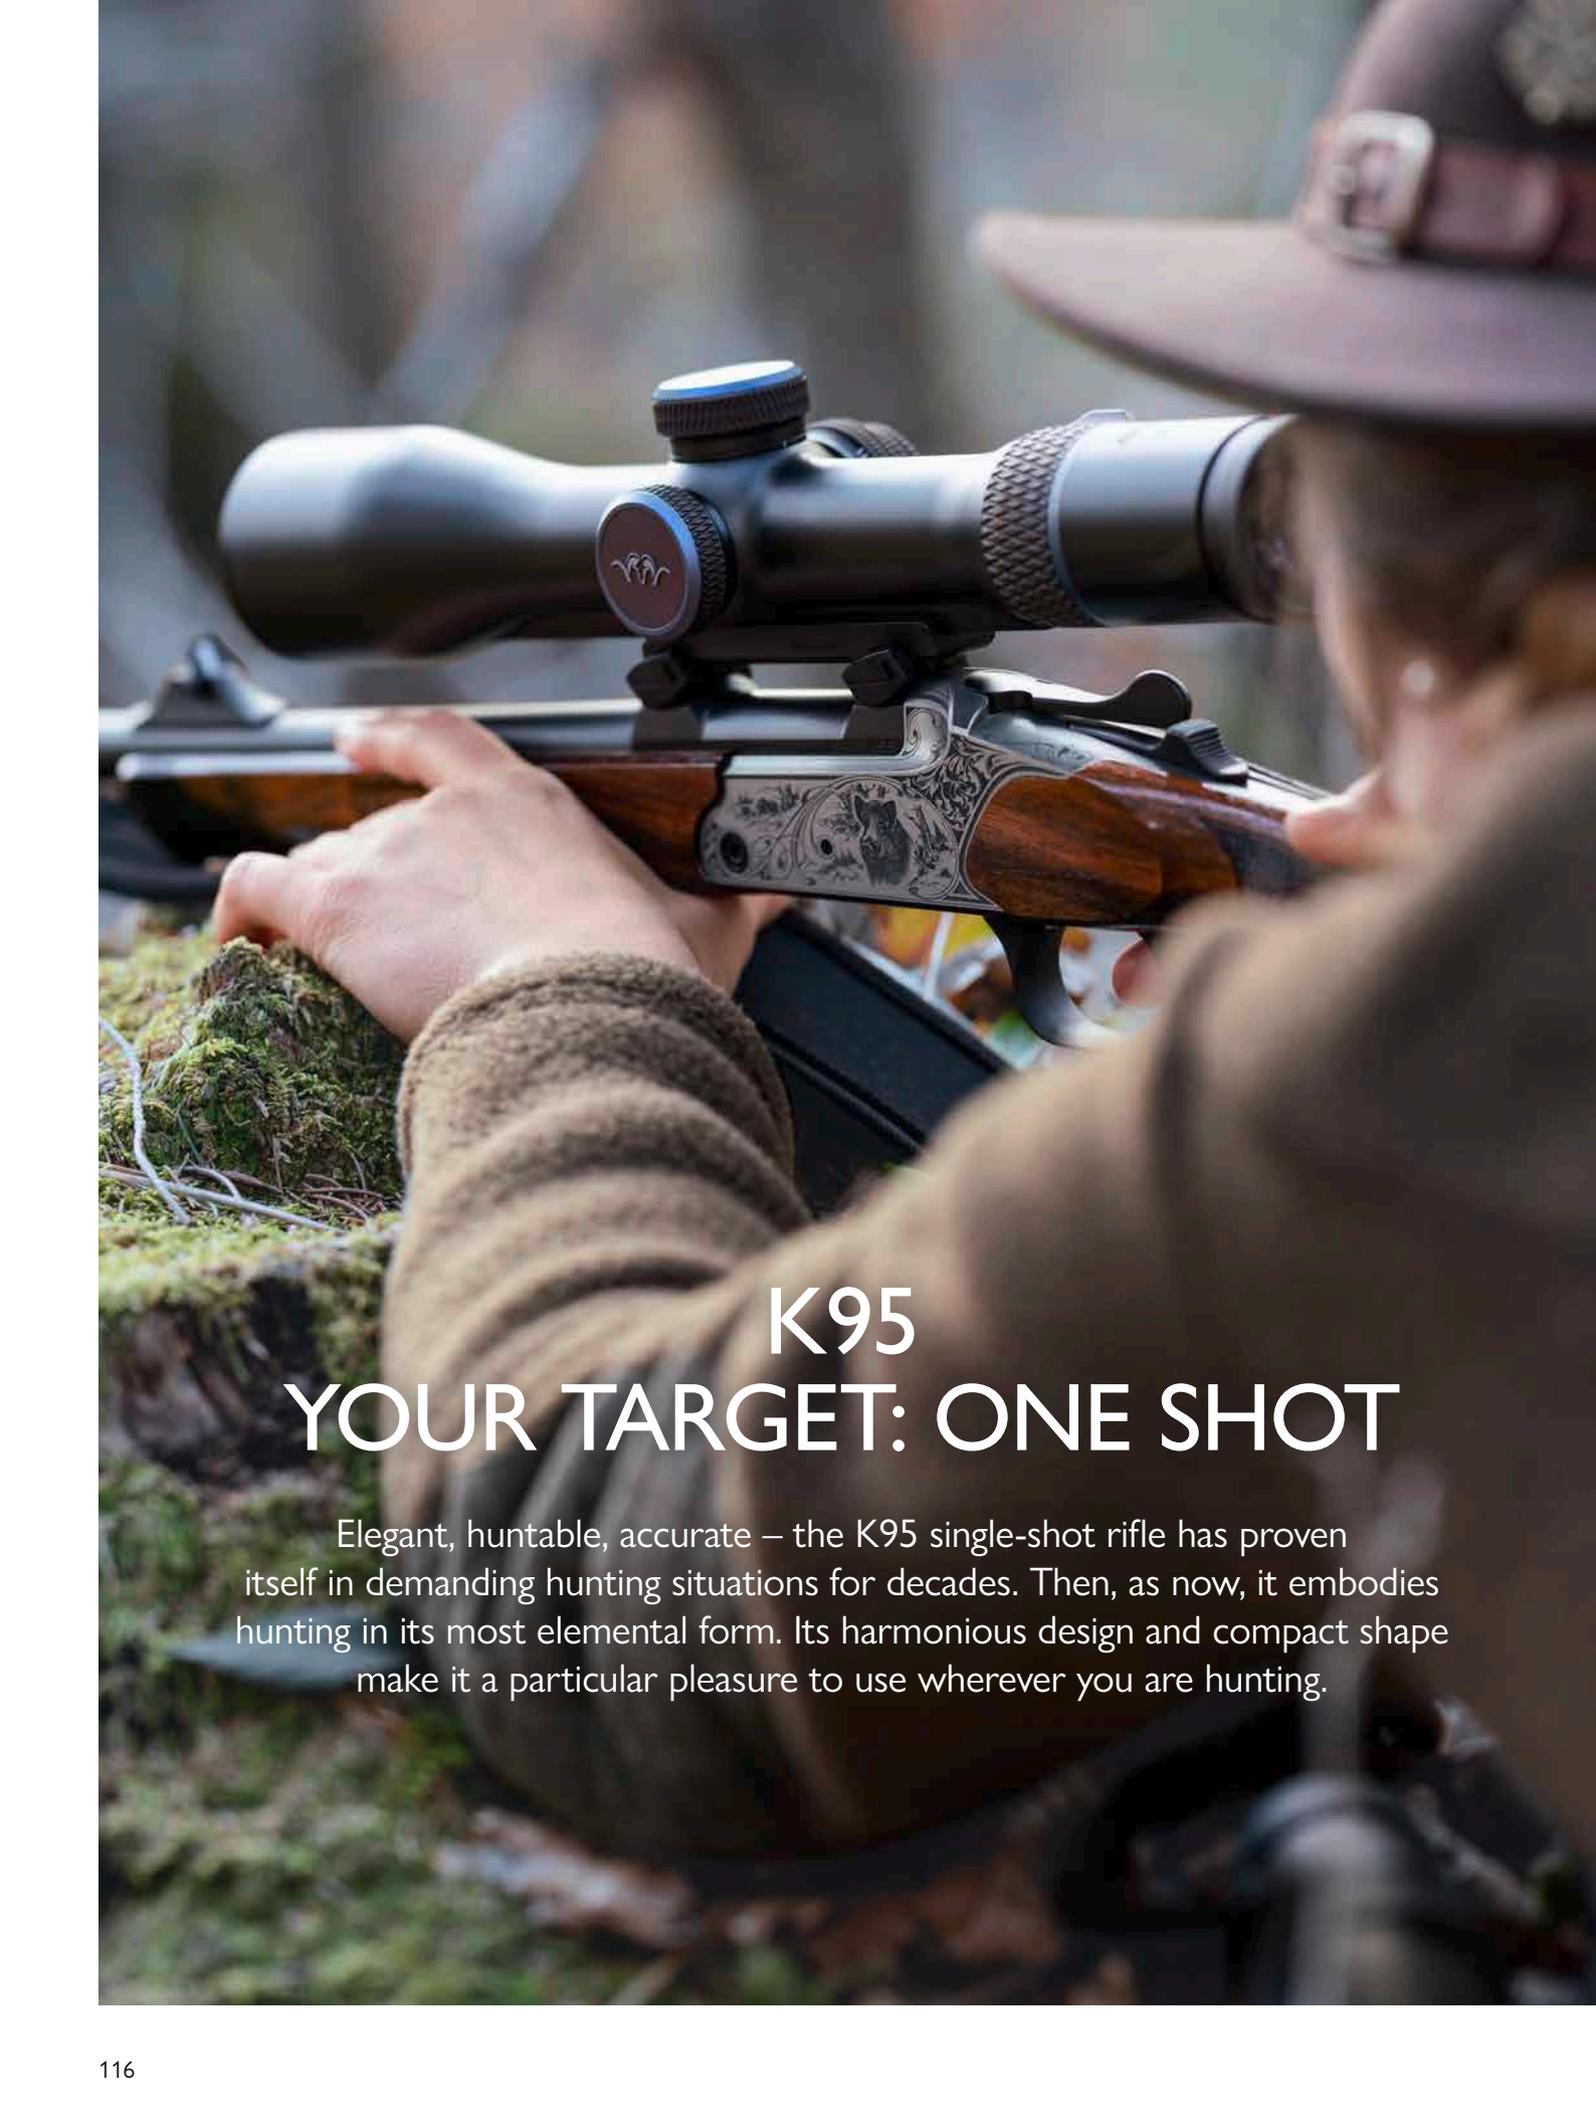

BLASER 8x30

Globetrotter

The lightweight stalking companion for hunting in distant lands or close to home.

K95 YOUR TARGET: ONE SHOT

Elegant, huntable, accurate – the K95 single-shot rifle has proven itself in demanding hunting situations for decades. Then, as now, it embodies hunting in its most elemental form. Its harmonious design and compact shape make it a particular pleasure to use wherever you are hunting.

K95 ULTIMATE

Robust design and legendary shooting accuracy. Thanks to its ergonomically optimized synthetic thumbhole stock, the K95 Ultimate combines tradition and functionality in a unique way.

- Ergonomically optimized synthetic thumbhole stock
- Black-brown synthetic stock with black elastomer inlays
- Receiver in matt black finish with gold-colored K95 lettering
- Available options include: adjustable comb, adjustable recoil pad, compact recoil pad, recoil absorption system

The K95 Ultimate with optional scope Blaser B1 2.8–20x50 iC and mount

K95 Ultimate Leather

As the K95 Ultimate, but includes:

- impregnated leather inlays on fore-end, pistol grip and comb

The K95 Ultimate Leather with optional scope Blaser B1 2.8–20x50 iC, mount and recoil absorption system

“

For me, the K95 Ultimate is the epitome of huntability. In addition to its slender appearance and light weight, I am fascinated by its modern and elegant design. It is my reliable companion on extended stalks in the hunting ground or when mountain hunting.

Stephanie Göhrig,
Blaser Social Media and Content Managerin

Create your individual K95!

K95

With a newly designed stock and receiver the tradition of the single-shot rifle will continue into the future. The higher, straighter comb makes for a pleasant shooting experience and underlines the timeless appearance of the K95.

- Receiver matt black
- Round barrel profile
- Black trigger
- Rubber recoil pad as standard
- Grade 3 wood
- Ebony fore-end tip
- Stock with Bavarian cheek piece and double rabbet
- Optional left-hand stock

ic illumination
CONTROL

The K95 with optional scope Blaser B2 2.5–15x56 iC, mount and grade 7 wood

Version 1: K95 Luxus, roe buck, right; wild boar, left

Version 2: K95 Luxus, chamois, right; red deer, left

Version 3: K95 Luxus, roe buck, right; red deer, left

Version 4: K95 Luxus, arabesques, right and left

Adjustable Comb

The intuitively operated, multi-level adjustable comb ensures the perfect mount in every situation. Once

the adjustable comb is fitted to your individual body proportions and your optics, the integrated memory function ensures return to the correct comb position for every shot.

Recoil Absorption System

The inserted recoil pad with recoil absorption system makes for a pleasant shooting experience – even with larger calibers. The internal

absorption elements are available in different hardness which can be adjusted to your preferences and produce a noticeably reduced muzzle climb while shooting.

Adjustable Recoil Pad

The adjustable length, height and pitch of the recoil pad offers a variety

of practical advantages. It can be adjusted quickly and easily for different shooters or, depending on weather, different clothing situations.

Compact Recoil Pad

The Compact recoil pad reduces the length of the Ultimate stock to only 350 mm. This allows the

Ultimate models to be adapted even more individually to your own needs.

COMPLETING THE MACNAB WITH THE BOCKDRILLING

For Robin Marx, Head of Product Management at Blaser, it was a long-held dream to take on the Macnab Challenge in north-west Scotland. That he wanted to use his preferred hunting gun, the Blaser Bockdrilling BD14, instead of a shotgun and rifle made this trip even more exciting.

The Macnab Challenge has its roots in a novel from the 1920s. Fictional Scotsman John Macnab was in a life crisis and was looking for an unusual challenge. Most of his hunting activities until then had been of the illegal kind.

One day, he challenged the owner of a large estate with the statement that he would soon remove the quarry of a single hunting day and return it to the estate house undetected. Although this boastful statement probably involved plenty of whisky, John Macnab kept his promise and soon delivered a stag and a brace of grouse to the estate owner's door. He completed this impressive feat with a salmon that he had caught in the nearby river, with a fly he had made from deer hair.

The story of John Macnab remains popular to this day. It has encouraged many hunters to copy his efforts – legally this time – and accept the challenge of shooting a stag and a brace of grouse (two birds) and of also successfully fly fishing for a salmon.

Robin Marx did not want to be without his own BD14 for this challenge. After all, this firearm had already proven itself in its greatest test: Robin had achieved the result for the gold shooting pin in the special stage at his home range of the German Hunting Association (DJV). It was probably the first time that such an achievement had been completed with a combination gun. Robin's choice had only one disadvantage – the very time-consuming journey to Scotland due to the firearm.

As the German airline Lufthansa no longer permit hunting rifles to be transported to Great Britain, a long car journey to Amsterdam was required first. From there, KLM Airlines offer direct flights to several destinations in Scotland, including Edinburgh, the destination airport for this trip. This was followed by a four-hour car journey with a rental car on narrow roads and in left-hand traffic, which Robin was not used to, until he finally reached Ullapool on the north-west coast of Scotland. From this small harbour town, a daily ferry goes to the Isle of Lewis, home to the Garynahine Estate. This seemingly endless hunting estate was the starting point for Robin's first Macnab experience.

Guide Donnie was rather surprised and not exactly enthusiastic when he saw Robin's rifle. He disapproved of the idea of having to hunt grouse and stag with a German Drilling with two rifle barrels and only one shotgun barrel. At least he was able to dispel Robin's concerns about the weather: It would only be raining for hours at a time instead of all day long as usual. →

Quite in contrast to Donnie's weather forecast, it was pouring down the next day – the first hunting day. The strong gusts of wind sealed the deal: Donnie decided not to try for the mandatory stag on the morning of that day. While the chances were not too bad, Donnie's decision was understandable. Because what good would it have been to shoot a stag if the potential of the subsequent grouse hunt would have been very low?

On the morning of the second hunting day, the weather had improved significantly and Donnie stayed with his hunting strategy. As he probably still saw Robin's Bockdrilling with only one shotgun barrel as a big handicap, he wanted to try for grouse first, of which at least two are required according to the rules of the Macnab challenge.

Luckily, one of Donnie's two Pointers soon indicated the first grouse in the extensive grounds. As an experienced shotgun shooter, Robin had no problems hitting the bird as it was flying off. That was the first hurdle overcome and Donnie was pleasantly surprised.

That even a master shot can miss was proven half an hour later. Robin was most upset about not having been focused enough. Donnie, however, having by now realised that Robin was no beginner, encouraged him and assured him that they would soon encounter more grouse. Shortly after, Robin completed the first step of the challenge with ease.

Now he had to catch a salmon with a fly rod in the river only a few kilometres away. Not an easy task at that time of year, as the salmon move to their spawning grounds and usually no longer feed. To be successful, the fly had to be used expertly to trigger a bite reflex. There was an added complication, however, on the day when Robin tried for his Macnab. The strong rains of the past days had caused the river to swell so much that Donnie's optimism had waned noticeably. But he was experienced enough to know which type of line, trace and fly could be the only saving grace in this situation.

It would turn out to be Robin's greatest challenge of the day. Already thinking about the stags and knowing that he was under great time pressure, it was not easy to follow Donnie's advice on how to handle the line and rod correctly. Everyone was accordingly relieved when the first bite of the day occurred about three hours later and the salmon had been safely brought to the river bank with a landing net.

There was not much time for Robin and Donnie to enjoy the catch under these difficult circumstances. The sun would set in a good two hours and Robin had to shoot his stag before then. As it would have been impossible to walk the distance from the river into the more hilly region of the estate, where the red deer are, they took a short trip in the fourwheel drive car.

The subsequent stalk at the edge of a high-lying valley on damp, uneven terrain was very strenuous and took longer than Robin and Donnie would have liked. It was due to the still very good red deer population in this area that Donnie spotted a lone, older ten-pointer quite quickly. It all came down to the wire then for Ronnie, when Donnie told him to take the shot. After a seemingly endless few minutes, the long-awaited shot finally sounded through the valley. Donnie grabbed his binoculars. His smile signalled relief and appreciation. —

COMBINATION GUNS EVERYTHING YOU NEED

Hunting is as varied as the different hunting grounds you go to. Whether you use a large or small caliber, each rifle has its own specific area of application. The same goes for shot – in many cases shooting with shot is the only option due to safety reasons when hunting down game. It is therefore essential to be prepared for any situation.

O&U SHOTGUN RIFLE BBF 95/BBF 97

Shotgun and rifle – the classic at Blaser. The barrels can be adjusted to each other by a qualified gunsmith. This means that the Blaser BBF is unbeatable for shotgun slugs.

- Receiver with grained side plates
- Grade 3 wood
- Blaser precision triggers
- Barrels float freely
- Stock with Bavarian cheek piece
- Optional left-hand stock

Blaser B1 2.8-20x50 iC and mount

BERGSTUTZEN BS 95/BS 97

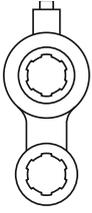

Many hunters, particularly those with mixed small game and in mountainous hunting areas, want to be able to carry a single firearm with two different calibers. The upper, smaller barrel of the BS 95 or BS 97 lies in a carrier tube and can be adjusted precisely to the bottom barrel.

- Receiver with grained side plates
- Grade 3 wood
- Blaser precision triggers
- Barrels float freely
- Stock with Bavarian cheek piece
- Optional left-hand stock

The BS 95 Luxus with optional
scope Blaser B1 2.8-20x50 iC and mount

DOUBLE RIFLE BB 97

Thanks to free floating and adjustable barrels, the range of applications for the BB 97 goes far beyond driven hunts. The BB 97 can also be ordered with a single trigger.

- Receiver with grained side plates
- Grade 3 wood
- Blaser precision triggers
- Optional single trigger
- Barrels float freely
- Stock with Bavarian cheek piece
- Optional left-hand stock

The BB97 Luxus with optional single trigger, scope Blaser B1 1-7x28 iC and mount

BBF 95/BBF 97, BS 95/BS 97 and BB 97 in Prestige version

As the standard models, but with:

- Side plates with arabesque engraving

BBF 95/BBF 97, BS 95/BS 97 and BB 97 in Luxus version

As the standard models, but with:

- Side plates optionally with animal engraving or fine arabesque engraving
- Grade 4 wood

Single-lock or Double-lock? It's your Choice!

Combination guns from the 95 model series are fitted with a single-lock and combined guns from the 97 model series with double-locks. This means that there are two strikers and two firing pin springs in the system. **Both systems have their benefits.**

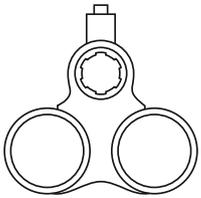

The advantage of the 95 system is the slightly simpler operation, as only one firing pin spring needs to be cocked. This means that the firearm is automatically decocked after a single shot has been fired and the safety is engaged.

The advantage of the 97 system is that when a second shot is required, it can be released very quickly without having to be recocked. The 97 system is particularly useful for hunters who frequently have the opportunity of firing a second shot quickly.

DRILLING D99

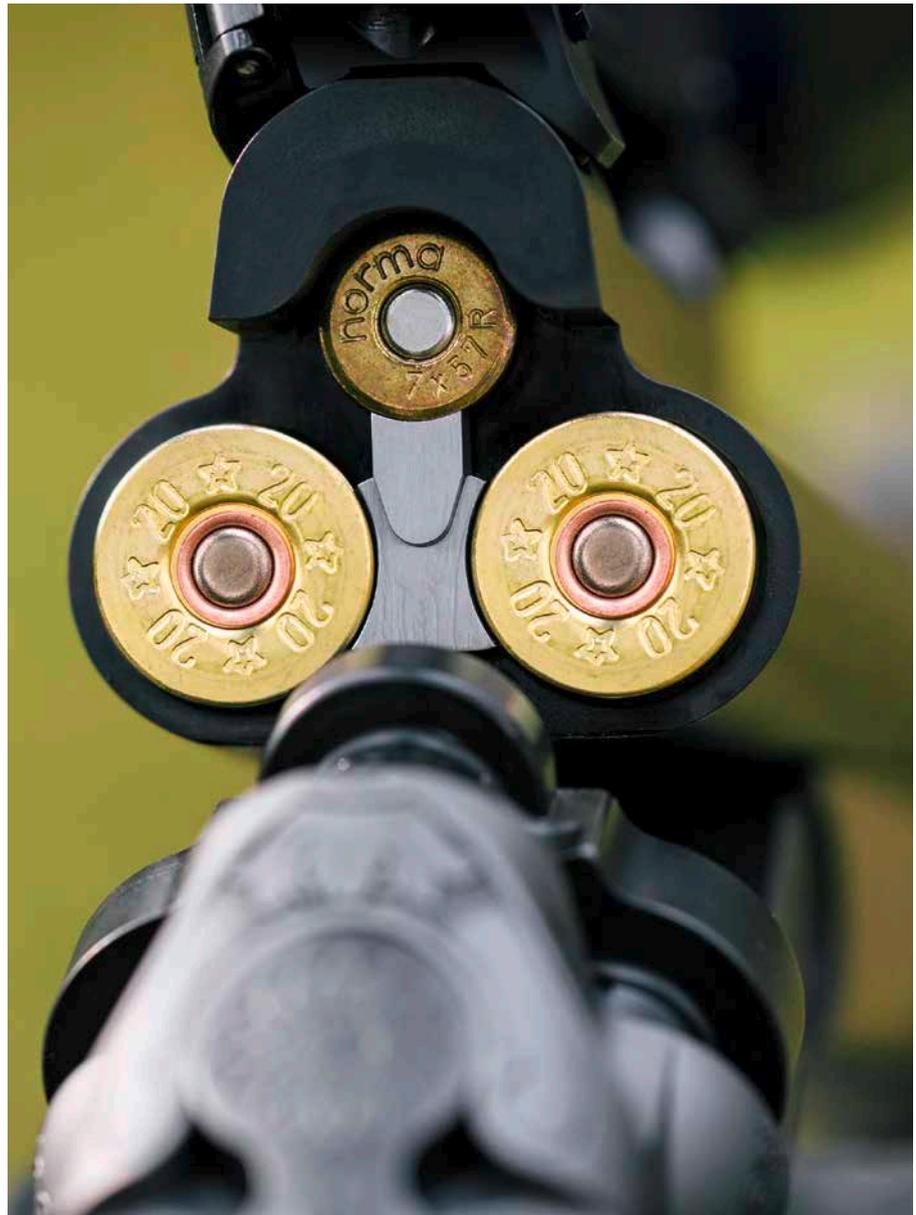

The Drilling D99, with its two shotgun barrels and a rifle barrel, is the best all-rounder. It is the ideal firearm for hunting in areas with small and big game animals. The D99 has a double-lock system so that a second shot can be taken with no hesitation and without recocking.

Thanks to the free-floating barrels, the point of impact remains constant even with quick follow-up shots. The extremely strong vertical block lock on the D99 helps contribute to its exceptional accuracy.

- Edge point engraving with small arabesques
- Black fore-end tip
- Optional with half-beaver tail fore-end
- Stock with Bavarian cheek piece
- Grade 3 wood
- Optional left-hand stock

The D99 with optional scope Blaser B1 2.8-20x50 iC, mount and rubber recoil pad

D99 Luxus

- As the D99, but with:
- Hand-engraved arabesque engraving
- Grade 4 wood

The D99 Luxus with optional scope Blaser B1 2.8-20x50 iC and mount

BOCKDRILLING BD 14

As hunters, we learn to expect the unexpected, whether in a blind or stalking, so it's understandable that we dream of a firearm that will allow us to take advantage of any situation. With the Bockdrilling BD 14, Blaser has developed the perfect blind and stalking firearm – compromises are finally a thing of the past.

The BD 14 has a double-lock system so that a second shot can be taken without having to recock the firearm. Thanks to the free-floating barrels, the point of impact remains constant even with a quick succession of shots, no matter which barrel was fired first. The extremely strong vertical block lock on the BD 14 helps contribute to the high degree of precision.

- Steel-grey anodized receiver, optional black anodizing
- Stock with Bavarian cheek piece
- Rubber recoil pad
- Black fore-end tip
- Grade 3 wood
- Optional left-hand stock
- Barrels can be adjusted to each other

BD 14 Luxus

As the BD 14, but includes:

- Animal engraving: choose from red deer and roe deer; red deer and fox with duck; wild boar and roe deer
- Grade 4 wood

The BD 14 Standard with optional grade 7 wood, scope Blaser B2 2-12x50 iC S and mount

BD 14 Baronesse

As the BD 14, but includes:

- Long side plates with arabesque engraving
- Titanium-nitrided triggers
- Engraved black trigger guard
- Grade 7 wood

The BD 14 Baronesse with optional grade 9 wood, scope Blaser B1 2.8-20x50 iC and mount

A photograph of two men in outdoor hunting attire standing next to a dark-colored truck. The truck's bed is filled with several ducks. The man in the center is wearing a dark jacket and a flat cap, holding a shotgun. The background shows a wooded area with trees and sunlight filtering through the leaves. The text 'F16 THE LATEST SHOTGUN CLASS' is overlaid on the image in large white letters.

F16 THE LATEST SHOTGUN CLASS

Perfection from passion: Have you ever taken a new shotgun in your hands and immediately felt familiar with it? This is exactly the experience most shooters have when taking the F16 in their hands for the first time. By devising the lowest profile receiver in its class, the F16 is provided with an exceptionally low center of gravity. This leads to an outstanding balance and less felt recoil at the same time making it the perfect companion for both hunters and ambitious clay target shooters.

CONCENTRATION AND SAFETY. INTUITION AND BALANCE.

Triplex® Bore Design

Three construction characteristics combine to provide optimized muzzle velocity, a homogeneous shot pattern and help dampen recoil:

- Innovative, extremely flat forcing cone. The shot stream passes into the cylindrical barrel as smoothly as possible with minimal deformation and without any dangerous increase in pressure
- "Overbore" internal diameter of 18.65mm (0.735")
- 12/76 gauge with additional steel shot proofing

Reinforced Firing

The F16 has been designed from the ground up to use steel shot and dealing with the stresses of using this type of ammunition have been incorporated throughout the design process.

Create your individual F16!

Lowest Profile Receiver in its Class

provides an exceptionally low center of gravity for the shotgun, makes it extraordinary pointable and dynamic, immediately leading to a better shot.

Blaser IBS® – Inertial Block System

The IBS® system eliminates the chances of fan firing or doubling and is integral to our World Class trigger's reliability.

Blaser EBS® – Ejection Ball System

The EBS® system activates the ejectors when a shot is fired and cocks them when opening the gun. The ejector springs are always decocked when the gun is stored in order to prevent spring fatigue. Resistance when closing the gun is always kept to a minimum, whether the ejectors were previously activated or not.

Best in Class Trigger Characteristics

It is here where the ingenious German engineering comes in. Purely mechanical in design this single selective trigger breaks like glass at 1,650g (3lb.10oz.) and operates independent of recoil. In a world measured in milliseconds your F16 is a significant advantage with intuitive shooting.

Innovative Monocoque Receiver Design

Design concepts developed in Formula 1 racing were the basics in selecting of materials for the F16. From the unique Gun Metal Grey surface coatings to laser hardening principals developed for cars traveling at 230 MPH. Safety and strength are more than words they are a necessity.

F16 GAME

Ahead of the game: Its unique pointability makes the F16 Game a perfect hunting companion.

The F16 Game with optional grade 4 wood

Gauge: 12/76

Barrel: 71cm or 76cm (28" or 30")

Firing: Reinforced firing with additional steel shot test

Sight: Nickel-silver pearl bead 3mm (0.12") 9mm (0.35")
Rib, tapered to 7.5mm (0.30")

Chokes: Blaser chokes – flush to muzzle 1/4, 1/2, 3/4 incl. choke wrench (standard). Additional Blaser chokes, flush to muzzle (cylinder up to 1/1) as well as extended Briley Spectrum chokes (Skeet to 5/4) are available at extra cost

Receiver: "Gun Metal Grey" with F16 logo, silver colored

Trigger: Trigger pull 1,650g (3 lb. 10 oz.)

Barrel selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood grade: Standard: 3
Optional (extra cost): Grade 4 wood

Drop: Standard: 38/56mm (1.50"/2.20") (Game stock)

Offset: 3/6/8mm (0.12"/0.24"/0.31")

Pitch: 84°

Stock length: 375mm (14.37") incl. recoil pad

Butt plate: Blaser Comfort recoil pad

Fore-end: English Style

Balancer: Optional balancer in the stock (extra cost)

Weight: From approx. 3.1kg (6 lb. 13 oz.)

Accessories: Incl. ABS travel case
incl. sling swivel for subsequent mounting

Optional left-hand stock, butt stock with adjustable comb
or Sporting stock (38/50 mm)

F16 SPORTING

At home on the shooting range! Thanks to balancer in the butt stock and the possibility to fix balancer weights on the barrel, the F16 Sporting can be balanced individually. In combination with the adjustable trigger blade it is the perfect prerequisite for your competition success.

The F16 Sporting with optional grade 4 wood

Gauge: 12/76

Barrel: 76cm or 81cm (30" or 32")

Firing: Reinforced firing with additional steel shot test

Sight: Red bead 3mm (0.12")
9mm Rib, tapered to 7.5mm (0.30")

Chokes: Blaser chokes – flush to muzzle 1/4, 1/2, 3/4 incl. choke wrench (standard). Additional Blaser chokes, flush to muzzle (cylinder up to 1/1) as well as extended Briley Spectrum chokes (Skeet to 5/4) are available at extra cost

Basküle: "Gun Metal Grey" with red F16 logo

Trigger: Trigger pull 1,650g (3 lb. 10 oz.)

Barrel selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood grade: Standard: 3
Optional (extra cost): Grade 4 wood

Drop: Standard: 38/50mm (1.50"/2") (Sporting stock)

Offset: 3/6/8mm (0.12"/0.24"/0.31")

Pitch: 84°

Stock length: 375mm (14.37") incl. recoil pad

Butt plate: Blaser Comfort recoil pad

Fore-end: English Style

Balancer: Prepared for barrel balancer (weights not included). Balancer in stock

Weight: Approx. 3.4 – 3.8kg (7 lb. 8 oz. – 8 lb. 6 oz.)

Accessories: Incl. ABS travel case

Optional left-hand stock, butt stock with adjustable comb or Game stock (38/56 mm)

The F16 Sporting has a balancer incorporated into the stock and is fitted to allow for optional barrel balancer weights, so the shooter can adjust their shotgun according to their needs.

Butt stock with adjustable comb (optional).

Length-adjustable trigger blade on the F16 Sporting.

See the F16 in Action

F16 GRAND LUXE MODELS

Elaborate leaf arabesques worked into traditional "Basso Relief" decorate the receiver of the F16 Grand Luxe. Upon request they can be complemented by English Scroll or game scenes. The selected Caucasian grade 6 walnut wood rounds off its elegant appearance. The F16 Grand Luxe is available in a Game or Sporting version.

The F16 Sporting Grand Luxe with animal motif framed in leaf arabesques

Ducks on the right side, pheasants on the left side

F16 HERITAGE MODELS

Fine leaf arabesques lavishly worked into traditional “Basso relief” adorn the stylish long side plates of the F16 Heritage. This elegant shotgun can be combined upon request with game scenes or fine English Scroll. Its stock is made of finest selected grade 8 walnut wood that has slowly grown in the high altitude of the Caucasus. The F16 Heritage is available in a Game or Sporting version.

The F16 Sporting Heritage with leaf arabesques and fine English Scroll

Ducks on the right side, pheasants on the left side

F16 INTUITION

With the lowest profile receiver in its class, the F16 forms the ideal basis for a shotgun that is perfectly tailored to the needs of the huntress – both for hunting and clay shooting.

Thanks to reduced pitch angle and slender pistol grip the optimized Monte Carlo stock rests naturally in the shoulder and insures positive trigger control. Shooting becomes more comfortable. The F16 Intuition versions boost self-confidence and lead to natural intuitive shooting. Huntress and shotgun instantly become one. The F16 Game and F16 Sporting is available as F16 Intuition.

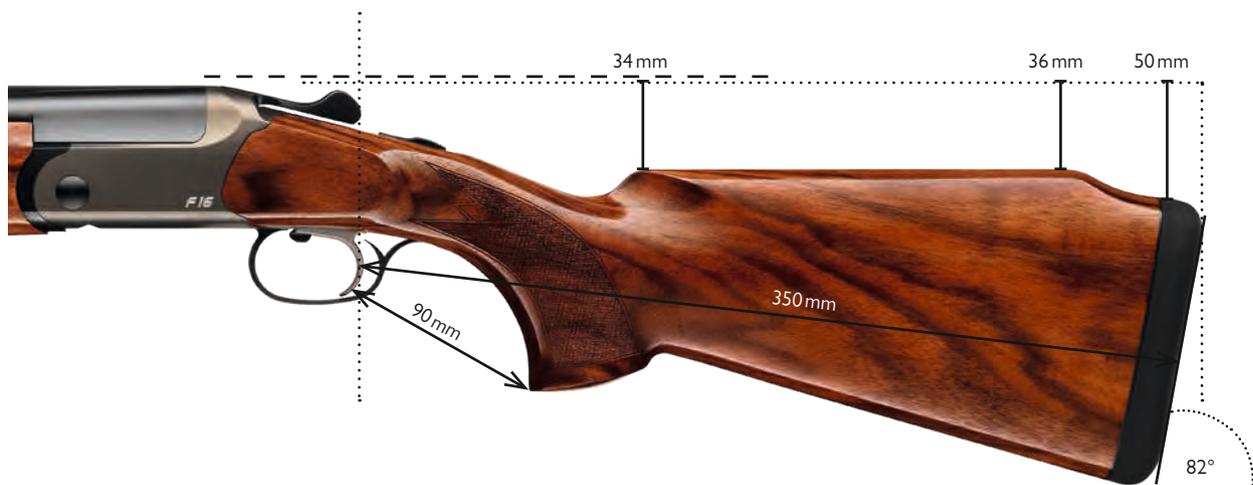

The F16 Sporting Intuition in wood grade 4

LADIES' CHOICE!
 INTUITIVE.
 ELEGANT.
 PERFECTLY
 BALANCED.

F16 Intuition Stock

A newly designed Monte Carlo shape provides the huntress with optimum target acquisition. With a stock length of 350 mm, it insures the perfect fit from the first shot. The benefits to the huntress are clear: she can comfortably rest her

face against the stock to get into the optimal shooting position. Due to the shorter stock the distance between the pistol grip and trigger as well as the distance between the butt plate and trigger is reduced. The pistol grip now boasts finer

features to easily accommodate a smaller hand reducing the risk of flinching. Shooting becomes more comfortable. Huntress and shotgun become one.

F3

THE SHOTGUN THAT ANSWERS TO THE HIGHEST DEMANDS

In competition the F3's technical superiority will out perform all others. When hunting the F3's outstanding pointability and balance will be no match for any game. Regardless of the setting, the F3 brings new meaning to intuitive shooting through ergonomics and technology.

CONCENTRATION AND SAFETY. INTUITION AND BALANCE.

Triplex® Bore Design

Three construction characteristics combine to provide optimized muzzle velocity, a homogeneous shot pattern and help dampen recoil:

- Innovative, extremely flat forcing cone with an angle of 2.5°. The shot stream passes into the cylindrical barrel as smoothly as possible with minimal deformation and without any dangerous increase in pressure
- “Overbore” internal diameter of 18.65mm (0.735")
- 12/76 gauge with additional steel shot proofing

Strengthened shot

The F3 has been designed for the use of steel shot and is officially certified as such. (Magnum proofed with additional steel shot proofing).

Blaser Balancer

The Blaser balancer system makes it possible for the F3 to be flexibly adapted to every shooter and any shooting style: swing-through, pull-away, maintained-lead or move-mount-shoot. The Blaser competition balancing system consists of two components. It comprises a stock balancer and barrel balancer. The stock balancer is a threaded rod that can be fitted with one or four moveable weight cylinders. The barrel balancer allows you to add up to an additional 170 g to the gun.

*Blaser EBS®

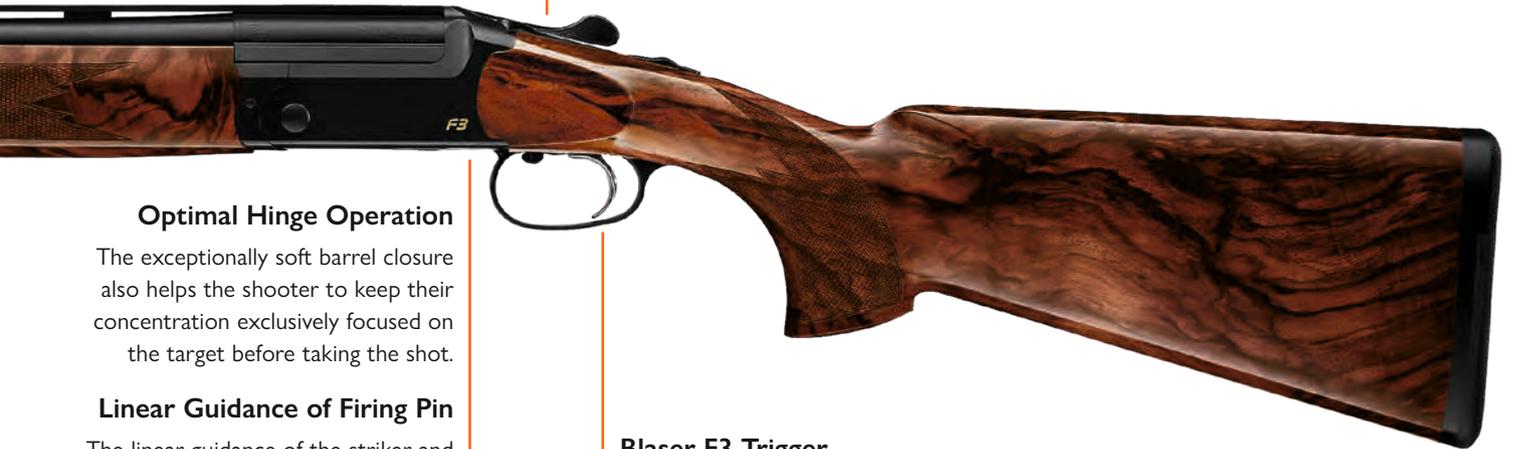

Blaser EBS® – Ejection Ball System*

The EBS® system activates the ejectors when a shot is fired and cocks them when opening the gun. The ejector springs are always decocked when the gun is stored in order to prevent spring fatigue. Resistance when closing the gun is always kept to a minimum, whether the ejectors were previously activated or not.

Blaser IBS®: Anti-Double System

The Inertial Block System (IBS®) prevents manual fan firing or doubling (the unintentional firing of a second shot). Many conventional single trigger systems use solutions that are detrimental to the ideal trigger-pull weight or trigger characteristics. Thanks to IBS®, the F3 trigger combines the highest possible level of safety with first-class trigger characteristics.

Optimal Hinge Operation

The exceptionally soft barrel closure also helps the shooter to keep their concentration exclusively focused on the target before taking the shot.

Linear Guidance of Firing Pin

The linear guidance of the striker and firing pin allows for the best possible transfer of kinetic energy and thus lightning fast ignition.

Solid Locking Wedge

The solid locking wedge combines a generous locking surface in combination with a locking plate at the bottom of the action to provide the highest level of locking safety.

Minimal Strain on the Locking Mechanism

Strain on the locking mechanism during shooting is exceptionally low thanks to the optimized geometry of the low positioned bore axis and the high positioned hinge pin. As a result the F3 is designed to last a lifetime.

Blaser F3 Trigger

The F3 trigger transforms your thought impulse into ignition within a millisecond of time. But why is this lock time so critical in shooting? The shorter the lock time the more accurate the shot will be. Along with the fast lock time you must have optimal trigger control. The F3 trigger breaks as crisp as glass at 1,400g with an extremely short length of travel. This ideal combination allows the shooter to realize his full potential without any delay in firing the shot. The barrel selector is conveniently located in front of the trigger and is marked for identification. The purely mechanical selective single trigger operates independent of recoil. The trigger blade can be adjusted for a customized length of pull to insure ideal finger placement.

Create your individual F3!

F3 COMPETITION

Ideal for a variety of competitive disciplines, including Sporting, Compak Sporting and Olympic Skeet shooting. All competition barrels can be used with the barrel balancer system and are almost identical in terms of weight, balance and swing characteristics. The sporting stock with pistol grip and palm swell encourages a relaxed hand position during target acquisition.

The F3 Competition with optional grade 7 wood

Gauge: 12/76; 20/76; 28/70; .410

Barrel: 71 cm, 76 cm or 81 cm (28", 30" or 32")

Firing: Reinforced firing with additional steel shot test

Sight: HIVIZ® shotgun bead kit

Chokes: Blaser Interchangeable Chokes Flush to Muzzle: Skeet (SK), 1/4 (IC), 1/2 (M), 3/4 (IM) and 1/1 (F) incl. choke key and choke box for 5 chokes

Receiver: Matt black action, with other versions available

Trigger: Length adjustable, trigger pull 1,400 g (3 lb. 1.38 oz.)

Barrel Selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood Grade: Standard 5

Drop, Offset, Pitch, Stock length: Available stock versions see page 164

Butt plate: Slip-on rubber recoil pad

Fore-end: Fore-end English Style; optional Semi-Beavertail fluted or Schnabel

Balancer: Barrel and stock balancer

Weight: From approx. 3.6kg (7 lb. 15 oz.)

Accessories: Interchangeable bead kit, ABS case
Optional left-hand top lever and left-hand stock

F3 "VANTAGE"

The youngest member of the F3 family offers shooters faster target acquisition and noticeably less neck and shoulder strain thanks to a combination of a significantly higher rib and a perfectly coordinated stock. The flat ramp angle also extends the shooter's peripheral vision, regardless of the height of the clay and the angle to the target.

The F3 "Vantage" with optional grade 6 wood

Gauge: 12/76; 20/76

Barrel: 76 cm or 81 cm – "Vantage" Barrel Mid Rib (30" or 32")

Firing: Reinforced firing with additional steel shot test

Sight: HIVIZ® shotgun bead kit

Chokes: Briley Interchangeable Spectrum Extended: Skeet (SK), 1/4 (IC), 1/2 (M), 3/4 (IM) and 1/1 (F) incl. choke key and choke box for 5 chokes

Receiver: Matt black action, with other versions available

Trigger: Length adjustable, trigger pull 1,400 g (3 lb. 1.38 oz.)

Barrel Selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood Grade: Standard 5

Drop, Offset, Pitch, Stock length:
Available stock versions see page 164

Butt plate: KickEez® rubber recoil pad

Fore-end: Fore-end Semi-Beavertail fluted; optional English Style or Schnabel

Balancer: Barrel and stock balancer

Weight: From approx. 3.8kg (8 lb. 6 oz.)

Accessories: Interchangeable bead kit, ABS case
Optional left-hand top lever and left-hand stock

F3 SUPERSPORT

The F3 Supersport is the specialist choice for F.I.T.A.S.C., English and American Sporting shooters and is also becoming an increasingly popular choice for successful Olympic Trap competitors.

The F3 Supersport with the optional grade 7 wood and fore-end Schnabel

Gauge: 12/76; 20/76

Barrel: Supersport barrels: 76 and 81cm (30" and 32") set in the factory to a pattern 70:30 (sighting plane "figure 8")

Firing: Reinforced firing with additional steel shot test

Sight: Mid bead and front bead

Chokes: Briley Interchangeable Spectrum Extended: Skeet (SK), 1/4 (IC), 1/2 (M), 3/4 (IM) and 1/1 (F) incl. choke key and choke box for 5 chokes

Receiver: Matt black action, with other versions available

Trigger: Length adjustable, trigger pull 1,400 g (3 lb. 1.38 oz.)

Barrel Selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood Grade: Standard 5

Drop, Offset, Pitch, Stock length:
Available stock versions see page 164

Butt plate: KickEez® rubber recoil pad

Fore-end: Fore-end Semi-Beavertail fluted; optional English Style or Schnabel

Balancer: Barrel and stock balancer

Weight: From approx. 4.0kg (8 lb. 13 oz.)

Accessories: Incl. ABS case "Supersport"

Optional left-hand top lever and left-hand stock

F3 SUPERTRAP

The harmonious combination of total length, balance and weight distribution makes the F3 Supertrap the ideal companion for champions, whether as an over/under (OU), Under-Single (USGL) or an F3 Supertrap Combo (OU + USGL) version.

Thanks to the large adjustment range of the rib, demanding trap shooters can use the F3 to its full potential and adjust the shot placement by raising or lowering the rib according to their individual requirements.

The F3 Supertrap Under-Single with optional grade 6 wood

The F3 Supertrap over-and-under Standard with optional grade 6 wood

Under-Single barrel balancer

Balancer in the stock

Gauge: 12/76; 20/76 (O&U) 12/76 (USGL)

Barrel: Supertrap barrels: OU barrel 81cm (32"): set in the factory to a pattern of 70:30 (sighting plane "figure 8") USGL barrel 86cm (34"): set in the factory to a pattern of 85:15 (sighting plane "figure 8")

Firing: Reinforced firing with additional steel shot test

Sight: Mid bead and front bead

Chokes: Briley Interchangeable Spectrum Extended: Skeet (SK), 1/4 (IC), 1/2 (M), 3/4 (IM) and 1/1 (F) incl. choke key and choke box for 5 chokes

Receiver: Matt black action, with other versions available

Trigger: Length adjustable, trigger pull 1,400 g (3 lb. 1.38 oz.)

Barrel Selector: Selection of the preferred shot sequence, conveniently placed in front of the trigger

Wood Grade: Standard 5

Drop, Offset, Pitch, Stock length: Available stock versions see page 164

Butt plate: KickEez® rubber recoil pad

Fore-end: Fore-end Semi-Beavertail fluted; optional English Style or Schnabel

Balancer: Barrel and stock balancer

Weight: From approx. 4.0kg (8 lb. 13 oz.)

Accessories: Incl. ABS case "Supersport"

Optional left-hand top lever and left-hand stock

F3 LUXUS MODELS

Scroll arabesques frame the animal engravings of the F3 Competition Luxus. Ducks and pheasants form the main motif. The F3 Luxus is also available with pure ornamental engraving with scroll arabesques as main motif. The effect: noble and discreet at the same time.

The F3 Competition Luxus with game scene framed in leaf arabesques

Ducks on the right side, pheasants on the left side

F3 GRAND LUXE MODELS

Partridges and pheasants, elaborately worked into relief and embedded in a filling of leaf arabesques decorate the side plates of the F3 Competition Grand Luxe. Its stock is made of selected Caucasian walnut wood of grade 5 wood.

The F3 Competition Grand Luxe with game scene framed in fine English scroll

Partridges on the right side, pheasants on the left side

F3 BARONESSE MODELS

Elegant long side plates with classy engraving characterize the F3 Competition Baronesse. Choose between animal engravings with ducks, pheasants or fine scroll arabesques. Selected Caucasian Walnut wood grade 7 as well as a golden trigger round off its elegant appearance. With shotgun case and kit of five chokes.

BLASER AMMUNITION

Effective and Accurate

STRONG PERFORMANCE. FOR SHORT BARRELS.

8,5x55 BLASER

Minimum length. Maximum effect. Magnum character. The 8,5x55 Blaser caliber is made for short barrels and use with silencers. The modern cartridge comes in five fillings and delivers highest performance even with barrel lengths of less than 50 cm. This makes the 8,5x55 Blaser caliber the all-rounder for almost all kinds of European hoofed game and every hunting situation.

Benefits at a Glance:

- perfected for short barrels and use with silencers
- highest inherent precision due to development according to the latest ballistic findings in cooperation with renowned ammunition manufacturers
- modern cartridge design with compact overall length and sufficient powder volume for short distance cycling of the bolt
- powder is all burnt off close to the muzzle in order to protect the silencer, provide increased damping performance and more comfortable recoil behavior
- bullet diameter of 8.5 mm as a perfect base for an optimal effect in the game's body
- wide range of bullets from 9-14.9 g for every hunting application – with or without lead

CAUTION: Fire or blast hazard and hazard of fragment projection. Keep away from hot surfaces, sparks, open flames and other sources of ignition. No smoking.

SHORT AND POWERFUL. OPTIMIZED FOR SILENCERS.

When it comes to compact overall length with total performance at the same time, the bolt action rifle R8 is predestined for use with a silencer: The magazine is positioned directly above the trigger and thus gives the R8 the decisive edge in pointability – already from the start it is shorter than any other conventional bolt action rifle. In combination with a short barrel and the Blaser integral or over barrel silencer this results in a rifle that is hard to beat in terms of huntability.

This is exactly what the 8,5x55 Blaser caliber was developed for. Even with barrel lengths of less than 50cm, it reaches ideal ballistic values that are normally only achievable with use of longer barrels for high performance calibers.

The R8 Ultimate Leather with Blaser Over-Barrel Silencer and Barrel Length 58 cm.

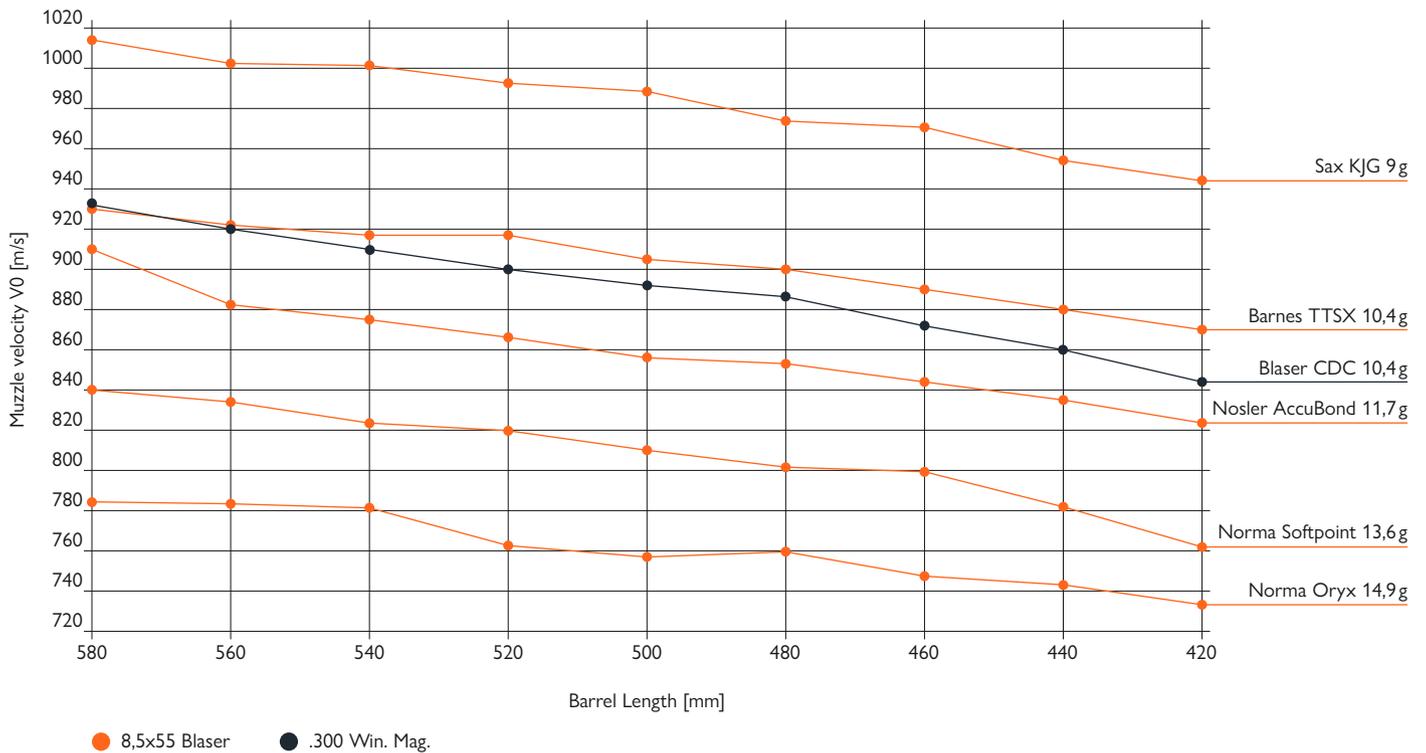

The R8 Ultimate Leather with Blaser Over-Barrel Silencer and Barrel Length 47 cm.

A barrel shortened by 11 cm results in a minimal loss in performance

Muzzle Velocity Subject to Barrel Length

CAUTION: Fire or blast hazard and hazard of fragment projection. Keep away from hot surfaces, sparks, open flames and other sources of ignition. No smoking.

BLASER CDC – ENVIRONMENTALLY RESPONSIBLE: LEAD FREE

More than 30 years ago, Barnes (today one of the world's most renowned bullet manufacturers) put a lead-free copper hunting bullet on the market. The goal was to provide a bullet with consistently good expansion qualities and – at the same time – improve ballistics.

The Blaser CDC (Controlled Deformation Copper) bullet combines all these desired qualities in the optimum way, including excellent accuracy and superior knock-down effect. CDC is specifically adjusted for light to medium game, meeting the needs of hunters in Central Europe perfectly. CDC is designed and field-tested by Blaser. In order to ensure the highest quality possible, CDC bullets are manufactured by Barnes and loaded by Norma.

Compared with other brands of lead-free bullet, the weight of the Blaser CDC bullet has been only slightly reduced from those containing lead. This has been done deliberately, to ensure the CDC's excellent controlled bullet performance over a wide range of distances and velocities. Thanks to the heavier weight, CDC bullets offer outstanding penetration and excellent stability.

The CDC's bullet tip reacts immediately on impact due to its special design consisting of an innovative expansion cavern, pressure grooves and a polymer tip. On penetration, CDC forms four separate petals, preventing fragmentation and meat damage.

Thanks to its weight, the CDC projectile provides consistently good deformation over a large range of distances.

CAUTION: Fire or blast hazard and hazard of fragment projection. Keep away from hot surfaces, sparks, open flames and other sources of ignition. No smoking.

BLASER CDP – BEST EFFECTS WITH LEAD

As a result of the controlled deformation process (CDP) the CDP projectile ensures a powerful shock effect and high penetration force while its weight remains virtually the same.

Despite its relatively low weight, the CDP bullet produces the optimum exit wound while causing minimum meat damage. Upon impact, the CDP bullet mushrooms symmetrically in four directions. Regardless of varying velocity and target resistance, the deformation process always remains controlled. When mushrooming, the diameter of the bullet increases by 2.5 times. This effect has been achieved by accurately calculating the behaviour of the bullet components during the shot.

Extensive testing over hundreds of shots in the field showed the following results:

- in 78% of cases, the quarry ran less than 20m following a hit
- in 94% of cases, very low meat damage was reported

The tip of the projectile consists of a soft alloy that reacts dynamically.

Four internal grooves along the length of the bullet, set at 90 degrees, control the symmetrical deformation process.

The increasing thickness of the sleeve towards the rear supports controlled expansion.

The V-shaped closed bridge is robust yet flexible. To a large extent, the forces that affect the projectile in the barrel are absorbed. The bridge gives the projectile reliable protection against decomposition and provides optimal interior ballistics.

The hard rear core promotes penetration performance and ensures that the projectile retains close to 100% of its weight.

CAUTION: Fire or blast hazard and hazard of fragment projection. Keep away from hot surfaces, sparks, open flames and other sources of ignition. No smoking.

BLASER MAGNUM – THE HIGH-PERFORMANCE CALIBER FOR LONG-RANGE SHOTS

In cooperation with Norma, Blaser has developed a brand-new and completely original generation of high-performance cartridges. The latest ammunition technology was applied to achieve optimum performance in each caliber group.

High Accuracy with Good Shooting Characteristics

High precision values in conjunction with notably increased energy and velocity data make the Blaser Magnum calibers your best choice for long-range shooting – whether you are hunting in the mountains, in the savanna or on a plateau. Thanks to an optimized cartridge geometry, a stable cartridge base and modern powder types as well as the four-groove barrel profiles and adapted twist rates, the Blaser Magnum offers a more comfortable recoil than other Magnum cartridges.

Four Calibers, Eight Loads

The Blaser Magnum calibers are available with Hornady Interlock, Nosler AccuBond, Barnes TSX/TTSX and Blaser CDP bullets. Norma also offers additional loads under its own company label.

The range of Blaser Magnum cartridges from left to right: 7mm Magnum with Hornady Interlock bullet; .300 Magnum with TTSX bullet; .300 Magnum with CDP bullet; .338 Magnum with Nosler AccuBond bullet; .338 Magnum with Barnes TTSX bullet; .375 Magnum with Barnes TSX bullet

AROUND THE WORLD WITH THE 8,5x55 BLASER

Traveling the world and hunting with the 8,5x55 Blaser caliber is one of our video projects that has taken us from cold Norway to incredible Namibia. We have hunted in many countries before but doing so in Africa had long been a dream. After much planning, it finally became a reality.

Our excitement was palpable as our plane touched down on the tarmac at Namibia's Windhoek airport. After leaving a frigid, snowy Norway, we were embraced by a wave of welcome warm air. Soon thereafter, we were met by our guide who was waiting to take us to Blaser's Sney Rivier Lodge in the heart of the Namibian wilderness.

We reached the area after a two-hour drive and couldn't believe our eyes. The spots in the tree were unmistakable. A leopard! It could have taken days or weeks to see one.

We drove on for a few more minutes and received a warm welcome at the Blaser Sney Rivier Lodge. We had seen pictures of it, but this lodge is much more stunning in person. And luxurious. Truly beyond our expectations.

General Manager and Professional Hunter Conway Volek gave us a tour and introduced us to the staff who showed us our rooms and helped with luggage. Later, by the lunch table, the guides shared plans for us to visit the shooting range to check the rifles and assess our shooting skills. On this trip, we decided to leave our lovely Blaser R8 rifles at home. Our favorite caliber is 8,5x55 Blaser, and we knew they had a few Blaser R8 Silence rifles in 8,5x55 caliber at the lodge, so opted to borrow theirs which made our travels lighter and much easier.

After a few minutes drive through the bush, we came to the shooting ground and the fun began. We shot from 100m up to 400m from various positions – sitting from the table and standing using shooting sticks. As expected, the Blaser R8 Silence performed flawlessly.

The 8,5x55 Blaser is a solid caliber but with the Silence model, it was super comfortable and pleasurable to shoot. After burning some gunpowder, our guides approved us ready for hunting. And as the day was coming to an end, we went to the place called "Sundowner" – a beautiful spot atop a hill with breathtaking surroundings. We met some other fellas there and shared drinks and laughter while telling hunting stories. →

A LEOPARD AT FIRST SIGHT AND A LODGE TRULY BEYOND OUR EXPECTATIONS.

IT WAS SURREAL
SEEING ALL
THIS AFRICAN
WILDLIFE FOR THE
FIRST TIME.

The following day Conway took us on a photo and film safari as we explored the area. As soon as we left the lodge, we started seeing animals, and there were loads of them. So many different species!

The area was massive, and we had covered just a tiny piece of it while driving all day filming and taking numerous photos along the way. There was always something new surprising us and the time flew by. It was surreal seeing all this African wildlife in person for the first time, rather than on television. Early the next morning, we gathered around the breakfast table as the sun was about to rise. Over coffee, our guide told us we would be hunting a mature oryx bull, and we were super stoked about it!

We had seen a group of those beautiful animals while we were on the photo safari. The plan was to drive to the higher peaks, park the Pick-Up, hike up to do some glassing, locate an oryx, and then try to close the distance and make a stalk. Easier said than done. We looked for oryx for three days and hadn't seen the right one. We had spotted a few groups with oryx, but they were females and young males holding together.

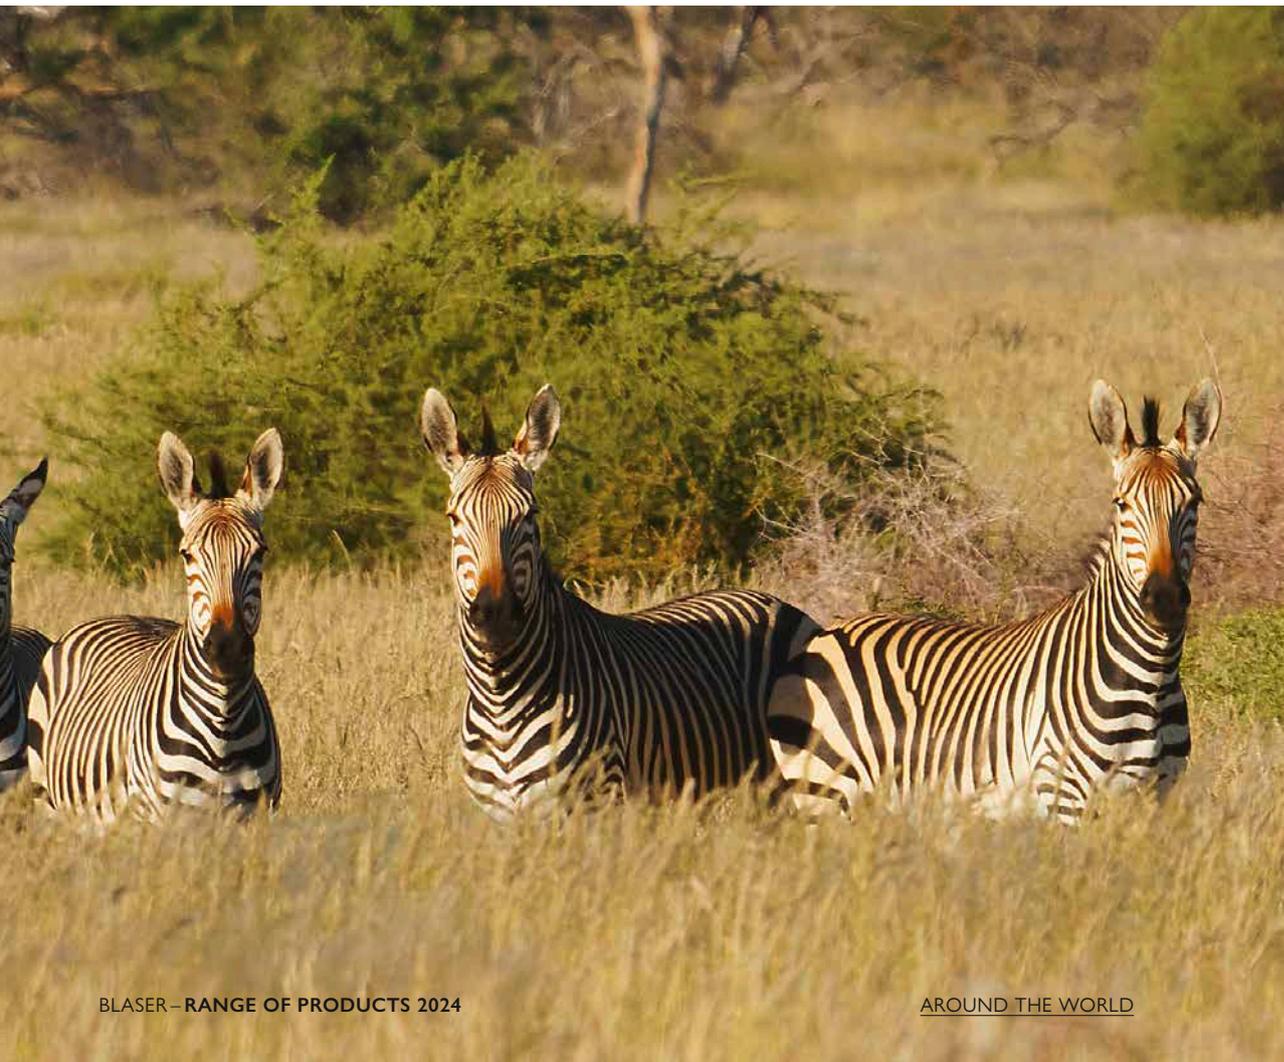

The old and mature oryx males, as usual, are not in groups and most of the time they roam alone, making hunting them all the more challenging. Because of this, we had added a mountain zebra to our hunting list and, this particular morning, we left the lodge when it was still dark and drove to the highest peak in the area. We arrived as the sun started to rise and listened to hundreds of bird and animal sounds as nature awakened all around us. An incredible experience!

As the sunlight broke through the sky, we started glassing for animals. From the high peak, we could see vast distances and were able to scan a massive area, but it took a while to spot a few zebras on the horizon. Due to the thick bush and lots of cover, glassing is challenging and animals can appear and disappear very quickly. But this time, the zebras were calmly feeding, and we decide to give it a go.

TAKE YOUR TIME. WHENEVER YOU ARE READY.

Professional hunters knew the area well and the plan was to drive closer and then try to approach them on foot and get within range for the shot. It was not that easy. The ground was incredibly dry, and it was hard to walk quietly. We managed to get close enough to hear them, but the bush was so thick, we couldn't see them. Then the guide found a tiny opening and set the shooting sticks. I aimed but, unfortunately, could only see the zebra's head. The body was still covered by thick bush. Not an ideal shot. As we tried to make an even closer approach, the zebras spooked and disappeared at full speed. We tried to relocate them and eventually spotted them again on the high hills in an open area but making a successful stalk was unlikely, so we decided to leave them and continue our drive. Suddenly the guide spotted another group of mountain zebras. It was almost the same scenario as on the first stalk, only this time the bush was not as thick, and we were able to get within 90 m of them.

A few zebras were behind the tree and another single one was coming from the left and stopped broadside. The guide beside me silently whispered, "Take your time. Whenever you are ready". I fired the 8,5 x 55 Blaser, and there it was. Our very first African game laying on the dry ground. It was a challenging and intense hunt, and the relief after accomplishing it was immense. →

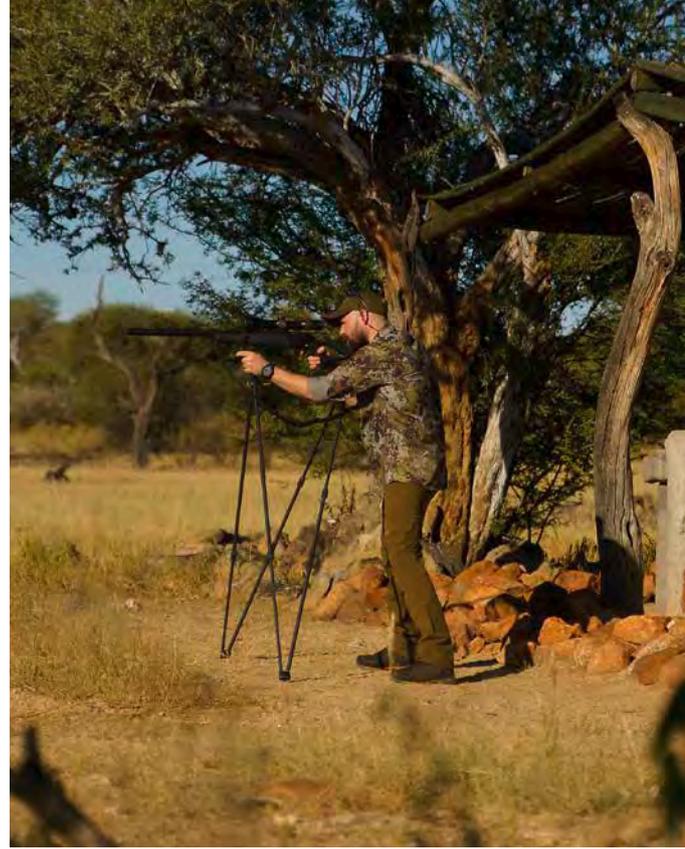

The following day, after a good rest at the lodge, we went after an impala ram. As luck would have it, we saw a lot of them while hunting or filming other animals, but now that we were pursuing them, they were few and far between. We had been driving around and glassing since early morning and had seen some impala bucks, but they were too young to take out. We also spooked an eagle and saw his prey hanging in the tree. It was a young steenbock. A nice encounter and a reminder of the balance and life cycle in nature. As the heat started to pick up, we headed back to the lodge but on the way back, we stopped to check one last spot. It was a small rocky hill and when we reached the peak, there were four nice impala rams feeding right below us. Completely unexpected!

The adrenaline rush kicked in, our hearts were pounding, and everything seemed to be happening so fast. In situations like this, it's important to not rush the shot. Luckily the rams kept feeding and didn't see or hear us due to the strong wind. We had time to get into position for the shot. This time it was 150m downhill in high wind, but it all came together, and the ram dropped in our sight. Once again, our trusty 8,5x55 did a great job.

On the last day of our hunt, we decided to take it easy and didn't drive too far from the lodge. This time we were after springbok. We had seen hundreds of them during our time here and were looking for a decent buck. We made several stalks but unsuccessfully. They were in bigger groups, and it was not easy to trick so many eyes and noses. In the distance, we spotted a single buck bedding down in an open field. His head was facing the opposite direction making him perfect for approach. It took a while, but we slowly closed the distance. It was only when the rifle was already on the shooting sticks that the buck felt something was not right and stood up looking at us. But it was too late for him, and the rest is history. We still couldn't believe that it all came together but the professional guides and teamwork paid off. What a great way to end the hunt.

THE BEST WAY TO UNDERSTAND HUNTING HERE IS TO EXPERIENCE IT ON YOUR OWN.

Back at the lodge by the dinner table, we shared some hunting stories. It was sad to leave after such a great week spending time at the luxurious Blaser Sney Rivier for the very first time. This experience totally changed our minds and understanding of conservation and hunting here.

We thought it would be easy – almost too easy – but hunting here is far from it. The best way to understand is, to experience it.

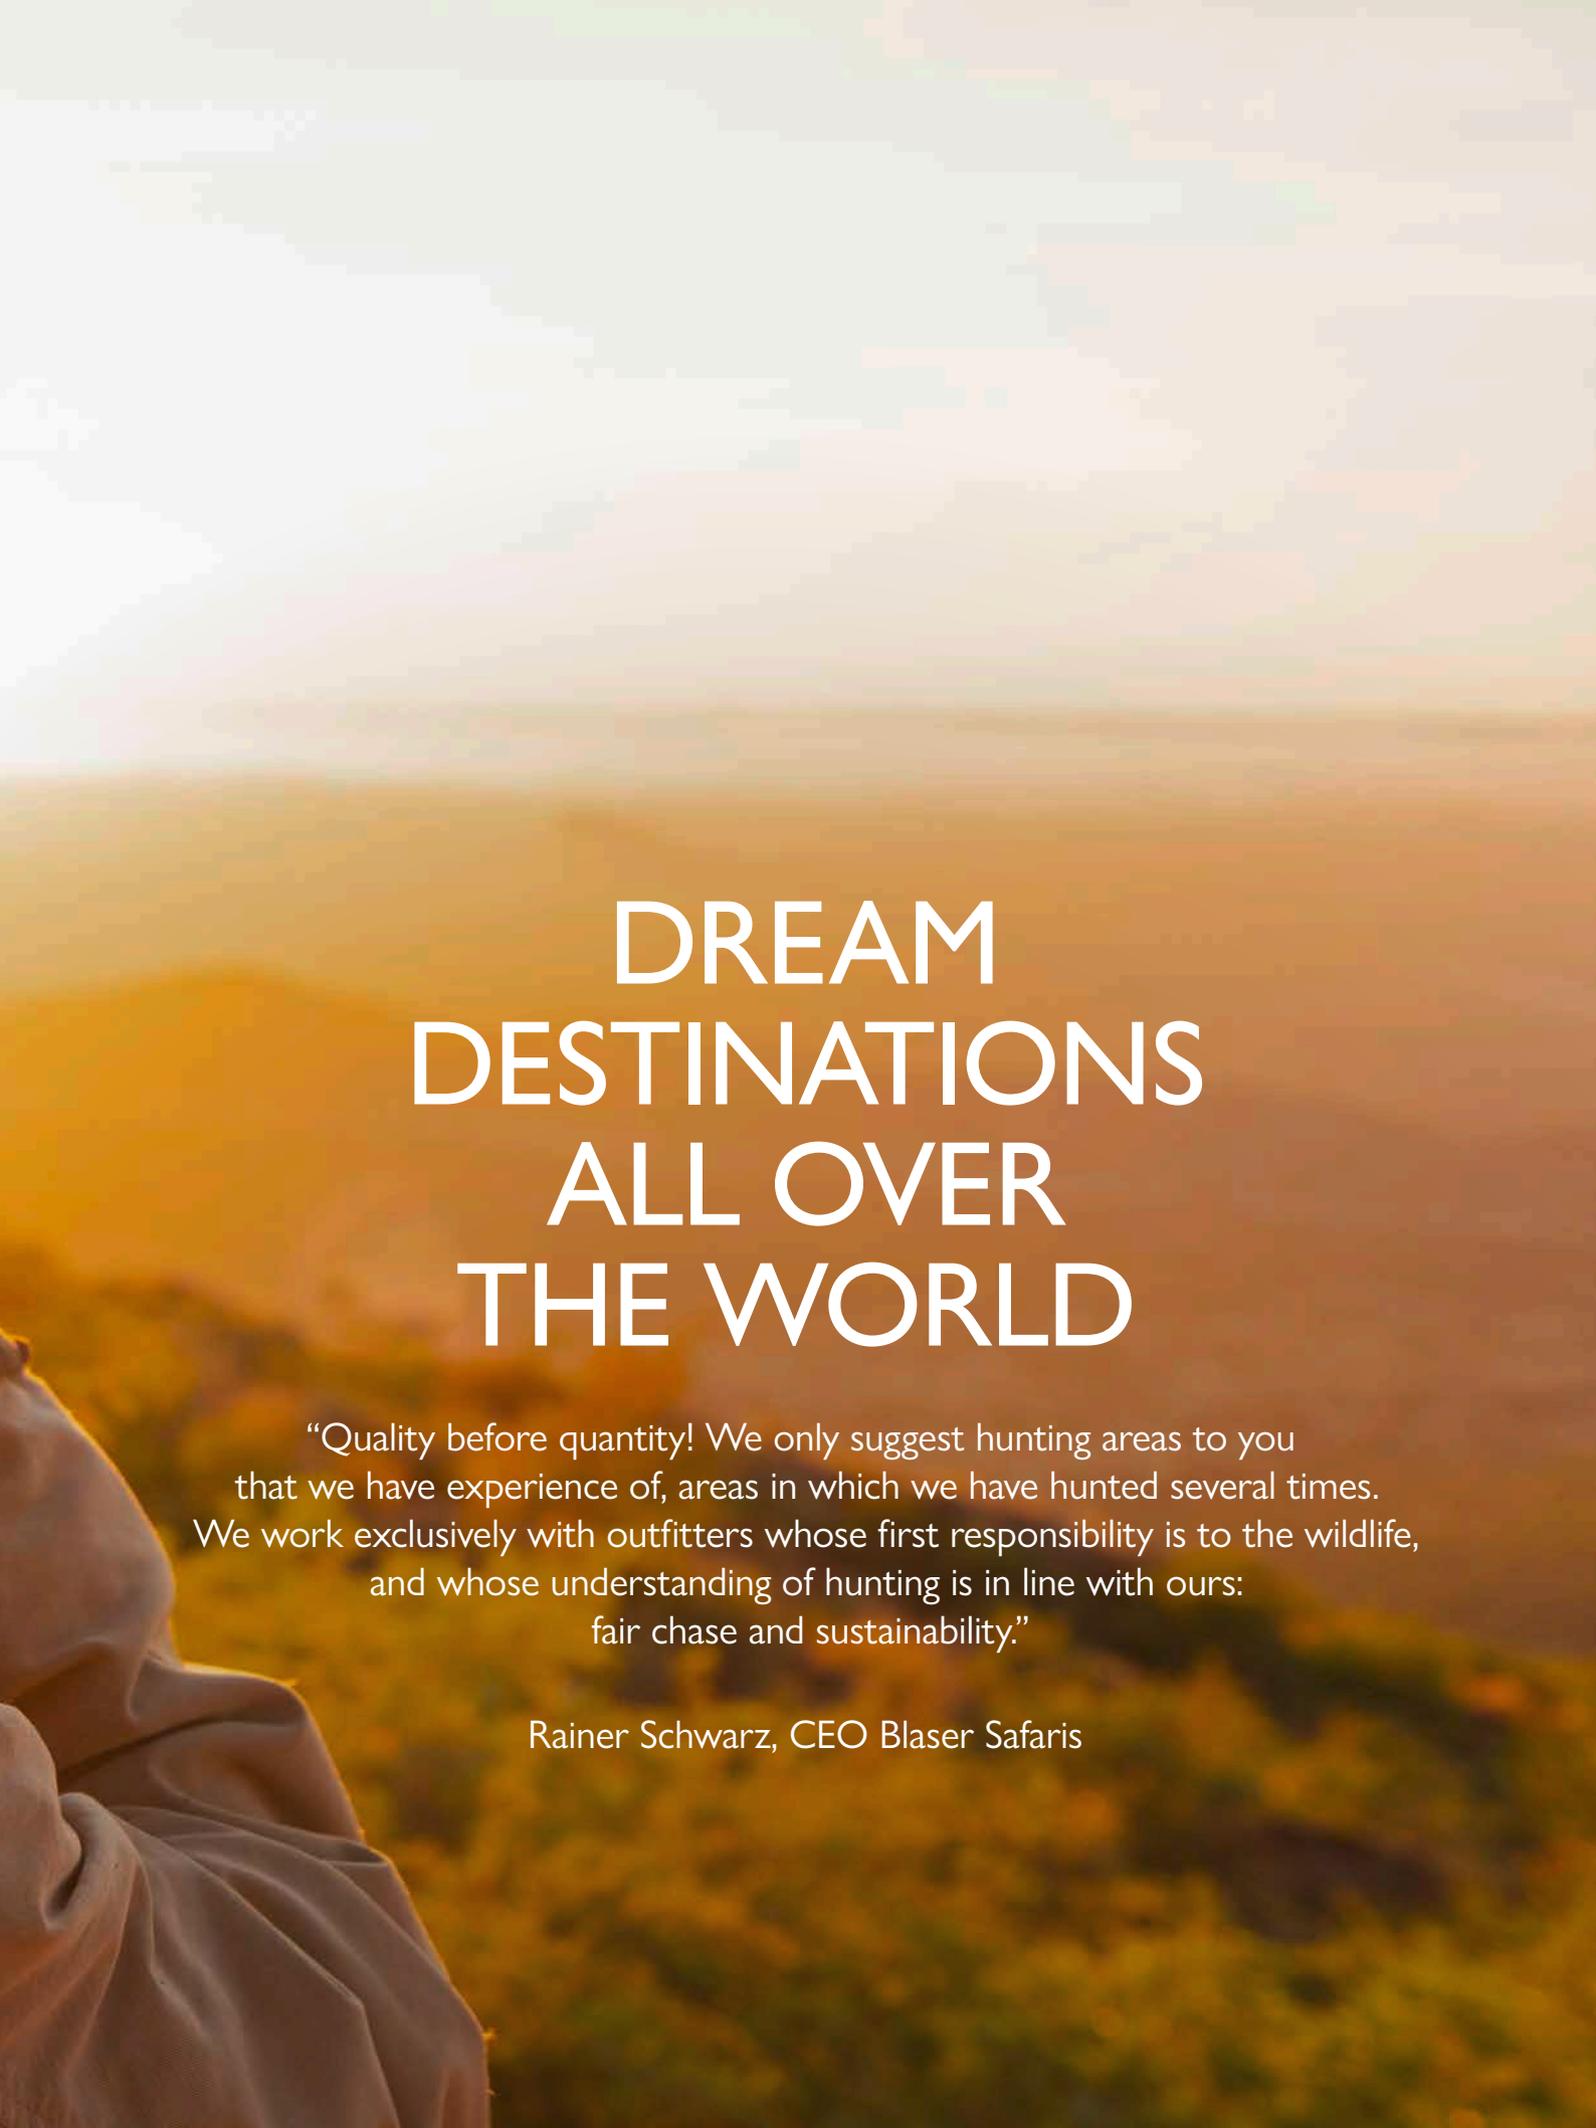

Over the years, we have hunted a lot in Europe, Scandinavia, Canada, and mid-Asia and pushed our Blaser R8s through wet and cold, snow and ice, and now through the heat and dust here in Africa! We have hunted a variety of smaller and big game animals and with high confidence, we can say that our favorite and “the one and only” is 8,5x55 Blaser caliber. Thank you to all of you who made it possible! We are totally hooked and definitely will come back to Africa again. Meanwhile, we are working on the film from this fantastic adventure which will appear in the near future.

Cheers!

Nero & Vaidas Black Fly Eyes - Media

DREAM DESTINATIONS ALL OVER THE WORLD

“Quality before quantity! We only suggest hunting areas to you that we have experience of, areas in which we have hunted several times. We work exclusively with outfitters whose first responsibility is to the wildlife, and whose understanding of hunting is in line with ours: fair chase and sustainability.”

Rainer Schwarz, CEO Blaser Safaris

NAMIBIA

Sney Rivier Lodge

Hunting fever can affect everyone: whether you are carrying a camera, binoculars or a rifle, being near wild game will send your pulse racing!

Experience the unique flair of Sney Rivier Lodge, which is just a two-hour drive from Windhoek airport. In a breathtaking landscape, you can hunt more than 20 game species, while stalking exclusively on foot. Thanks to a wide range of leisure activities, non-hunting partners will surely also enjoy the stay.

Situated in the landscape at the base of the Khoma Highlands, Sney Rivier Lodge enjoys a unique ambience. The architecture and design of the lodge is inspired by nature and hunting. The boundaries between inside and outside are blurred. Within view of the main house and the guest chalets is a watering hole where game can be observed all day long. →

The lodge is the ideal destination for both the experienced African hunter as well as for those hunting on the continent for the first time. The trip will be an unforgettable experience for the rest of the family, too. From the generous breakfast buffet to delicious dinners, the chefs are always able to surprise with a combination of traditional African and modern international cuisine. Sney Rivier Lodge pampers you with the highest levels of luxury, while being in the middle of the Namibian bush. The lodge was rebuilt in 2009 based on the concept of combining exclusivity with thrilling hunting in the wild.

ORIGINAL AND HONEST STALKING

Hunting challenges are guaranteed to be found on the almost 100,000 acres of hunting grounds, be it tracking wild game and stalking to within range of your quarry or sitting in a hide on one of the countless rocky hills. Our hunting guides and trackers are masters at helping you, the hunter, succeed. As excellent connoisseurs of flora and fauna, they are able to show you some of the most extraordinary natural wonders in Namibia.

You will be treated to the most amazing sights during every season of the year and at any time of day. Every stalk is worthwhile, every stalk will bring its own surprises. Hunting is done exclusively on foot.

Endless plains and a varied landscape always impress visitors from Europe, as Namibia is only sparsely populated and largely untouched. It counts among the most bio-diverse countries on the planet. —

AFRICA

CAMEROON

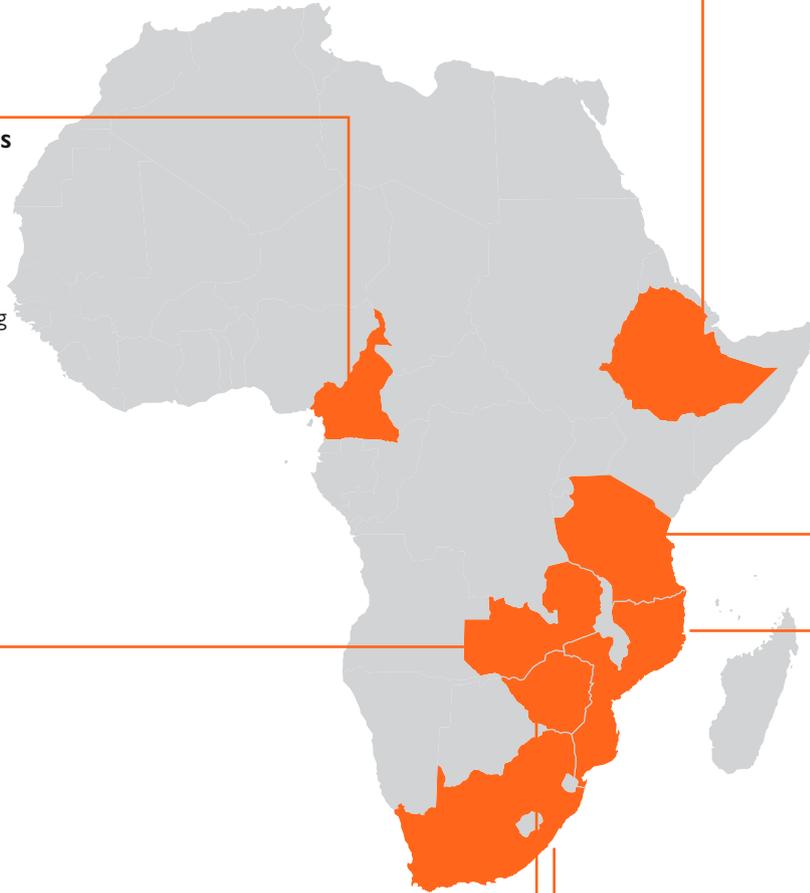

For Connoisseurs and Specialists

-  Hunting in the rainforest and in the savanna: All safaris are run on a
-  one-to-one basis, and each hunting guest is escorted by a professional
-  hunter with their own individual hunting vehicle and a team of trackers and bearers. We offer safaris in five camps: Mayo Oldiri, Mayo Nduell, Djibao, Mayo Vaimba and Rey Bouba.

SAMBIA

A Hunting Jewel

-  The Game Reserve lies in the world-famous Luangwa Valley and stretches
-  from the North Luangwa National Park to the Luangwa River. The area
-  covers 200 square kilometres of Miombo woodland, savannah and
-  rugged mountains.

ZIMBABWE

In Colonial Style

-  Hunting in Zimbabwe is done with our partner in the Matetsi region in the west of the country. These areas are the Kazuma/Pandamasuie Forest area which borders the Kazuma Pan and the Zambezi National Park.

Other hunting areas are near the Fuller Forest and further south in the Ngamo forest areas. None of the areas is fenced, so the game is free-range, and all areas are known for their very good game populations, with mature trophies.

The hunting season runs from April to October.

SOUTH AFRICA

Africa's Diversity

-  Safaris are run in South Africa throughout the year, with the best
-  hunting opportunities between April and October. Around 40 different
-  species of game can be hunted throughout the country, and each
-  safari is carefully planned by us to suit your wishes. Safaris in South Africa
-  are suitable for the whole family and for the non-hunters in the party, there are a variety of interesting
-  photographic tours.

ETHIOPIA

The Hunt at the Origin

The mountain nyala can only be found in the mountains of Ethiopia at altitudes between 1,800 and 3,650 meters. Together with our partner Northern Operations Africa we offer you a unique Highland Mountain Nyala Tour including the hunt for Mountain Nyala, Menelik's Bushbuck, Spotted Hyena and Colobus Monkey or a Lowland Safari in one or more areas as well as the combination of both hunting tours. In Ethiopia, hunting concessions are very strictly monitored, so hunting conditions and trophy quality are excellent.

MAURITIUS

Hunting on the Island of your Dreams

Experience a dream holiday on the Indian Ocean and exciting hunting: If you suggest Mauritius as a destination, you'll find it won't be too difficult to persuade your partner to come with you for a hunting holiday. After all, where else in the world can you combine a relaxed beach holiday with hunting?

MOZAMBIQUE

Buffalo Fever in the Zambezi Delta

Mozambique, in southern Africa, offers you the chance to experience wilderness unchanged for millennia. This is one of the greatest hunting countries on the globe: There are special areas reserved that have had no hunting pressure for 16 years.

TANZANIA

In Hemingway's Footsteps

A story of incomparable encounters: Tanzania is without doubt one of the most famous and exclusive safari destinations in Africa. Inyonga East, Kilombero Valley, Maasailand and Selous are the perfect examples of what Tanzania has to offer: unparalleled variety of wildlife and breathtaking views.

HUNGARY

Europe's Hunting Paradise

Hungary offers a unique variety of hunting opportunities with red deer, roe deer, mouflon, fallow deer and wild boar all available. The country's

exceptional game stocks and its hospitable people attract numerous visitors who come to enjoy Hungary's large selection of national hunting areas and comfortable hunting lodges.

Hungary is a fantastic country in which to hunt roe deer, which can be found in both the east and the west. Strong bucks are mainly found in eastern Hungary, where you can choose between stalking and high seat hunting. In western Hungary, with its extensive hunting areas, there is also excellent roe buck hunting to be had.

Since the start of the 20th century, Hungary has also been renowned for its classic small game hunting (driven or stalking). Hunters from across the globe visit the Hungarian lowlands in the east of the country every year. →

Red Deer Rut

There is no better time or place on earth to hunt such enormous stags than here in Hungary during the rut. The noblest of our game species is nurtured with great care here in Hungary where its natural habitat is still spacious enough. For most hunters the red deer rut is the biggest highlight of their hunting year.

Especially in our national hunting areas, rangers work towards the rut throughout the year, and thus make hunting all classes possible.

Driven Hunts

Experience the famous and perfectly organized driven hunts in the hunting areas of Hungary which are extremely rich in game. The country's big boars, many different game species and large bag limits attract numerous repeat hunters every year.

Mouflon and Fallow Deer

Hunting mature mouflon rams in the indigenous and hilly oak and beech forests of Hungary is particularly exciting.

Hungary is world-renowned for being one of the best countries in which to hunt big fallow stags: from interesting, abnormal stags to world-record class. —

ENGLAND

Moors, Heather and Hills

-  The rolling fields of rural England provide a magnificent backdrop to some excellent stalking. Roe bucks are in season from the beginning of April, and chances of getting a fine example are particularly high in the south of the country. The prime time is August, when their rut begins. One of the attractive things about English deer hunting is that most of it is done by stalking.
- 
- 
- 

SCOTLAND

Mystical Highlands

-  Hunting red deer in the Scottish Highlands is an almost legendary experience. With their deep valleys, steep slopes, crystal-clear rivers and lochs, the Highlands of Scotland have qualities of solitude and remoteness that are found almost nowhere else in Europe. Here you can stalk red deer all day long, and trophy fees are not high. Memorable hunts are the result of the skill and fitness of the hunter and his guide rather than the size of one's wallet.
- 
- 
- 

IRELAND

The Call of the "Emerald Isle"

-  Ireland is known as the "Emerald Isle", due to the lush green nature of its wild romantic countryside. Hunting sika deer here is a very special experience. During the rut from the end of September, you can hear the shrill whistles of the "black devils" almost all day long in the remote high valleys. This gives you a wonderful sense of freedom from worldly cares as you set off in search of sika, which can be very large here. Stalking wild goats also presents a very exciting yet cost-effective way of hunting in Ireland.

- 

CORSICA

Untamed Corsica

-  Experience the south of Corsica in its most original form: at Domaine de l' Ortolo in the 2,500 hectare nature reserve. Whether stalking, high seat or driven hunting for wild boar, hare, pheasant, partridge, ducks or hunting for migratory birds – the rich fauna of this exceptional place offers fascinating hunts for small and big game, feathered and furred game. Enjoy the breathtaking nature while hunting from October to January and relax afterwards in one of the stylish, country-style accommodations.
- 
- 
- 

SPAIN

In the Land of the Ibex

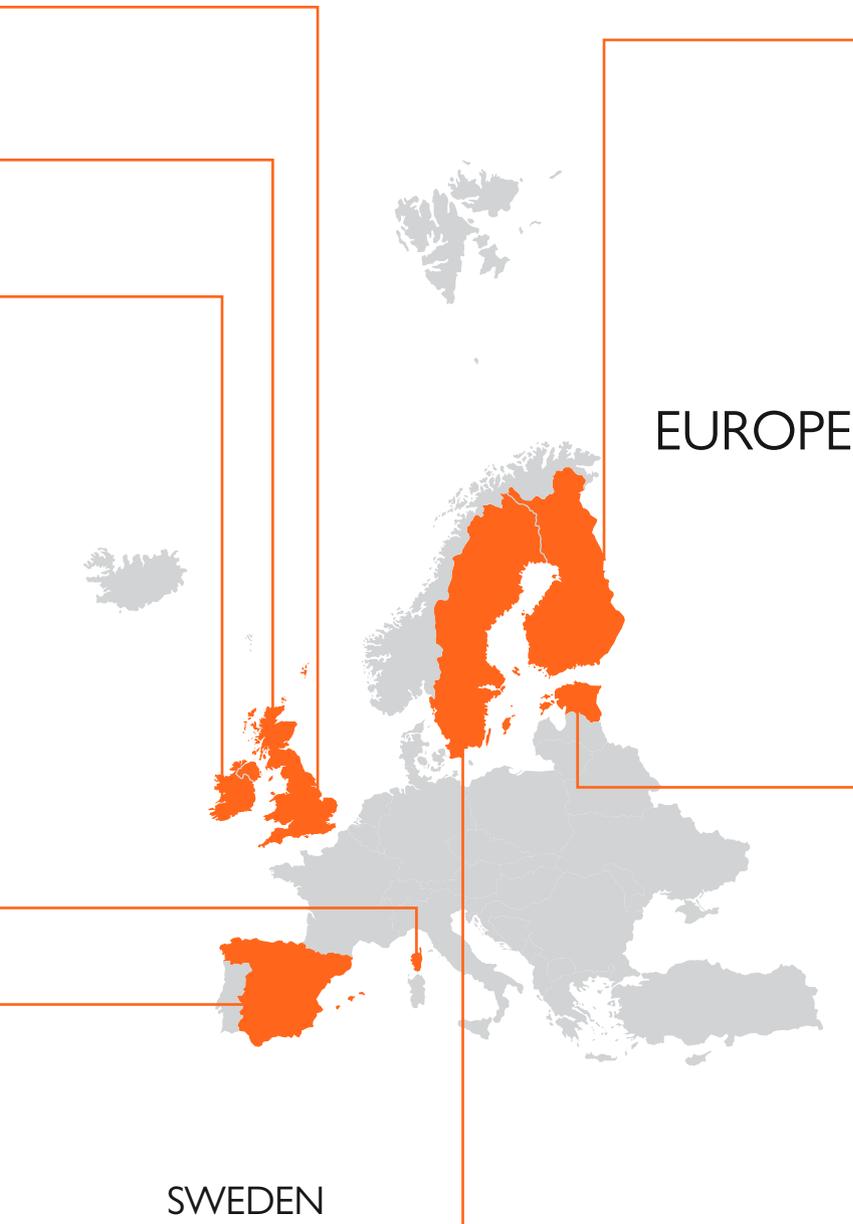

-  Hunting for ibex is the crowning glory in Spain – and there are four different subspecies on the Iberian Peninsula. The Gredos ibex is found in the Sierra de Gredos, which lies around 200 km west of Madrid. It is the most well known of the four species. The others are the Beceite ibex, from the Beceite mountains north of Valencia; the Sierra Nevada ibex from Andalusia; and the Ronda
- 
- 

ibex from the Ronda mountains. All four species are highly desirable trophies.

The hunting season for all four ibex species runs from October to the end of May. Hunting during the rut from the middle of November to the middle of December is highly recommended, or from April when bucks group together in small packs.

Along with ibex, Spain also offers opportunities for combined hunts, having good stocks of red and fallow deer, chamois and aoudad sheep in its various regions.

FINLAND

Hunting among Friends

In Finland you find a beautiful landscape and very friendly people.

Finland offers the hunts for whitetail, moose, grouse species like black grouse as well as capercaillie.

Whitetails are mostly hunted from the high seat. This can last until the late evening and is a unique experience – especially in the snow! Hunting moose takes place individually on the high seat or as a driven hunt: You may hunt bulls, cows and calves. The traditional nordic hunt for grouse species in the snow is hunting them in the treetops with the help of elk-hounds – either with a snowmobile or on skis.

ESTONIA

Indian Summer and Strong Moose

Hunting in the colorful Estonian forests in fall is a special experience. When the leaves turn from green to red, yellow, and bright orange, the northernmost, Baltic country invites hunters to pursue the Estonian elk.

The hunt is a combination of sitting and stalking from the middle of September till the end of October – and the hunt for stag, roe deer and wild boars can be combined, too. Due to the longer contiguous forests for larger distances you need to go by car.

SWEDEN

Vast Country in the North

Sweden abounds with traditional game that will give visiting hunters a very special experience. Moose, black grouse and capercaillie are among the first species that spring to mind.

The methods of hunting are no less fascinating, with dogs playing an important role on both group and individual expeditions.

The sparsely populated hunting areas mean that you really do experience the feeling of wilderness. Hunting here takes place in groups using dogs. Due to the size and wild nature of Sweden's hunting areas, a certain level of physical fitness is required.

EUROPE

SLOVAKIA

Traditional hunting with beautiful flora and fauna

Slovakia offers hunting of various game species, such as roe deer, fallow deer, mouflon, wild boar and red deer.

Many beautiful natural areas with dense vegetation can be found in the vast Slovak forests throughout the country – a wonderful and pristine hunting ground for the already mentioned game species.

AUSTRIA

For the Whole Family

Climbing from the flat country to hunt in the mountains is not the only aspect of hunting in Austria that holds a special thrill. To be able to spend the whole day stalking chamois in the spectacular Alpine scenery is a thoroughly enjoyable change for most hunters, who can only hunt in this type of terrain in the twilight hours at home, if at all. What's more, there are few places outside the beautiful Austrian Alps where you can combine hunting with a family holiday with just a few hours' driving.

Whether you choose to start your hunt from a cozy guesthouse, a holiday apartment or a stylish hunting lodge, you will always be impressed by Austrian hospitality and the knowledge and experience of your hunting guide.

Carinthia Drautal
Carinthia Maltata
Tyrol Seefeld
Galtür

CROATIA

Hunting with a Sea View

Croatia offers a unique combination of broad hunting opportunities with a Mediterranean flair. It is a lifetime experience to shoot mouflon or chamois in the rugged and rocky "karst area" along the picturesque Dalmatian coast. Enjoy the sea view and the cordial hospitality of the people.

In the inland of Croatia, near Rijeka, an adventurous hunt for bear awaits you. Our partner Pavle, will care for you – around the clock.

ROMANIA

The Pearl of Eastern Europe

Romania has huge potential as a destination for passionate hunters – all the hunting takes place in unspoiled countryside. Species include red and roe deer, wild boar and chamois. In addition, our guests enjoy excellent accommodation and service. From the Carpathian Mountains to the Danube Delta – all types of habitats can be found: high alpine terrain, hills, plains, lakes, as well as marshes along the Danube and the Danube Deltas.

The quarry's habitats are partly untouched forests. In Romania you create unforgettable memories.

TURKEY

Stalking in the Orient

The Anatolian Bezoar is the most popular big game in the mountains of Turkey and has a very special reputation among hunters from all over the world. Our partner "Wild Hunting", (the Ekenler family), has been landowners in the Taurus for more than 300 years. With a very experienced team they have been organizing and leading hunts for more than 20 years

for Anatolian Red Deer, Anatolian Chamois, Anatolian Gazelle, Western Kaunos Ibex, Hybrid Ibex, Konya Sheep and Anatolian Wild Boar. For the wild boar hunts, the exact hunting area is determined just before the start of the hunting trip.

SERBIA

Large Hunting Culture

Serbia is a country with an ancient hunting tradition. Either hunting roebucks in spring in the famous Voivodina or in the summer months during the rut, it is always an unforgettable experience for our guests.

You can hunt in popular territories like Subotica, Kanjiza, Novi Knezevac and Kumane. In top areas like Bascki Monostor, Apatin and the Serbian inland in Pancevo you can hunt impressive stag during the rut.

BULGARIA

Green Mountains and the Black Sea

We hunt in two completely contrasting Bulgarian territories. Our guests hunt in Kormisosh, a very mountainous state area in the Rhodope Mountains, for strong stag with a possible antler weight of up to 10 kg. Especially in combination with the chamois hunt, this territory is unique.

Our second destination in Bulgaria is Palamara: a state area at the Black Sea. It is THE area for impressively strong stag. During the rut we hunt stag with antler weights from 9 to 13 kg every year.

NORTH CANADA

Nunavut – North of the Arctic Circle

 In the nearly two million square kilometers of Nunavut territory in the Canadian North, it is possible to experience one of the most pristine and breathtaking hunts.  Those who have traveled the land of the midnight sun, north of the Arctic Circle, using sled dogs have gained insight into the ancient hunting culture of the Inuit and are changed forever. It is one of our planet's last real hunting adventures.   

The commercial hunt for caribou, musk ox, polar bear and walrus is one of the Inuit's few sources of income all the while managed under government regulations and hunting quotas to ensure absolute sustainability. Regardless of where you hunt now this will prove to be one of the most unique hunting expeditions of your life; experience the high north.

ALASKA

Rough Coasts and Strong Bears

 A successful hunt is only possible with plenty of opportunity, and more bears mean more opportunities. Admiralty Island, situated in the middle of the inside passage of Alaska's wild coast, boasts the largest density of brown bears per mile.  

Enjoy the natural beauty of Alaska against a stunning backdrop. It is not uncommon to see whales, eagles, seals, sea lions and a number of other animals. All trips include fishing and you will be treated to a special delicacy during your trip if it's available: fresh Alaskan crab and prawns.

A superbly equipped yacht provides you with comfortable accommodation, and you'll be travelling along the most remote stretches of coastline, using a rubber dingy to approach the areas that have the greatest promise for success.

The chance of bagging a really substantial coastal brown bear is unusually high here, and there is also the possibility of hunting wolves and black bears.

CANADA

Every Hunter's Dream

 Canada's northern provinces of British Columbia, Yukon and the Northwest Territories have been spared from the effects of civilization, making them the ideal terrain for a hunting trip. The far north captivates with the original and genuine wilderness of Canada.   

 The north of Canada offers you much more than just moose hunting. August is ideal for a very demanding Dall sheep hunt, or to pursue snow goats. The stalks for old caribou bulls starts in the high valleys in September, while the moose rut begins in the middle of that month. There is always the chance that a wolf might present itself, which gives each hunting day the possibility of a chance encounter. 

Blaser Safaris organizes hunts in:
North and South British Columbia
Vancouver Island
Nunavut
Saskatchewan & Alberta
Newfoundland

NORTH AMERICA

GREENLAND

Welcome to the Ice Age

Hunt musk oxen here and feel as if you have traveled back in time. Greenland is the largest island in the world and is blessed with vast, unspoiled hunting grounds on a scale that many can only dream of.

An autumn hunt is highly recommended and the season runs from the end of August to the start of October when temperatures hover around 0°C and are still bearable. If, however, you want to experience the fascinating world of eternal ice and are not put off by temperatures below -30°C, hunting in March and April can make your long-held dream come true.

VANCOUVER ISLAND

Wilderness and Civilization

Vancouver Island boasts a unique combination of stunning coastal landscapes, rain forests, fjords, mountains, and the metropolitan flair of British Columbia's capital, Victoria. This is one of the key attractions of hunting in one of Western Canada's most spectacular regions.

Spring is one of the best times to hunt black bears. Numbers on Vancouver Island are high, so that there is always a good chance to bag a substantial animal. Hunts are exclusively by stalking from boats and on foot and feeding areas are avoided. Due to the mild climate, hunting starts at the beginning of April.

SOUTH AMERICA

ARGENTINA

In the Land of the Gauchos

Argentina is one of the top destinations for hunting and fishing worldwide. With its varied climatic zones and regions, it offers many opportunities for foreign hunters.

The plains in the Buenos Aires province, the Patagonian mountains and the La Pampa province provide a large range of local and exotic game species. The seasons are the reverse of our European dates: the red deer rut takes place from March to April, which is the main hunting season. Other game species can be hunted from March to November.

Species include red deer, buffalo, fallow deer, blackbuck, four-horned sheep, axis deer, peccary, mouflon, Pampa goat, puma, wild boar, wild sheep and of course, small game.

Patagonia
Close to Buenos Aires

AUSTRALIA & NEW ZEALAND

AUSTRALIA

The Fascination of Down Under

Hunting is a special experience in Australia, and will surprise even the most experienced and well-travelled hunters. Along with water buffalo, which our partner specializes in, you can also hunt banteng and wild boar.

The hunting takes place in the best and most remote area of Arnhem Land, where Australia's nature and wilderness are untouched.

Accommodation is in comfortable tented camps near the hunting areas.

NEW ZEALAND

At the Other End of the World

This truly is one of the most impressive hunting areas in one of the most beautiful countries in the world.

Exceptional examples of game species and fantastic landscapes have established New Zealand as one of the destinations for the globetrotting hunter.

Conscientious management and a limited number of hunts ensure the highest quality of this outfit and helps to preserve it from season to season.

Tours and packages are tailored individually to each hunter or group and can contain other summer and winter activities. Whether you like sightseeing, a helicopter flight to a private boat with an overnight stay deep in the heart of the fjords, or a day of heli-skiing in the southern mountains – Minaret Station can satisfy any wish you might have.

Your accommodation is a comfortable lodge in the hunting areas, from which you have magnificent panoramic views across the beautiful landscape. The area is mountainous and the town is named after Lake Wanaka, the fourth largest inland lake in New Zealand.

FEATHERED GAME HUNTING WORLDWIDE

A large variety of species and beautiful countrysides make our feathered game hunting destinations all over the world an unforgettable experience. Feel well taken care of: Our partners know the best hunting areas and the optimal hunting season. Look forward to country-specific hospitality and the exchange of experiences with other hunters in the relaxed atmosphere of our comfortable accommodations.

Feathered game hunting destinations:

Argentina, Czech Republic, Finland, Hungary, Ireland, Scotland, Spain, South Africa, Tanzania

Please note that there is also a good choice of activities and exciting sights for non-hunting companions in most countries.

DEVELOPED BY HUNTERS FOR HUNTERS.

We hunters live with nature and its seasons – sometimes to the extremes. The three Blaser Outfits lines are therefore specially tailored in form, function and material to the different types of hunting and their specific requirements –for an optimum body climate, maximum freedom of motion and utmost wearing comfort. So that you can concentrate on the essential: your hunting success. The right choice for every hunt!

THE BLASER CLASSIC COLLECTION – HUNT IN STYLE

Living the hunting lifestyle – in all its facets. This is Blaser Classic. Our classic clothing line blends cutting-edge fabrics with traditional style elements. Whether it is on the hunt or in everyday life, it will give you the necessary freedom for the challenges to come – in all weather conditions and in any terrain.

CLASSIC HIGH SEAT – BENEFITS

1. High Heat Retention

- Sitting motionless for multiple hours or through a night results in the body cooling down significantly.
- Prevents heat loss contributed to environmental cooling.

2. Soundlessness

- Fabric: no movement noise.
- Features: no noise when accessing pockets or opening and closing the jackets.

3. Pockets

- Accessible when sitting.
- Top pockets – Quiet Snap Button (QSB).
- Upper hand warming pockets that are easily accessible when sitting.
- Pants side pockets tilted to front with QSB.

4. Covered Zippers & Buttons on the Jacket in the Chest and Sternum Area

- In order to avoid that the binoculars or the thermal imaging device rub against a hard object and make noise.

THE BLASER FIELD & FOREST COLLECTION ROBUST COMPANIONS FOR THE BATTLE

It is freezing cold, your breath is swirling like clouds and the barking of excited dogs is breaking the silence. Beaters and dog handlers make their way through difficult terrain, dry leaves are cracking on the ground. Steep inclines, dense bushes, thorny shrubs. The forest is rustling, the game is in motion. It is driven hunt season! And it is time for a brand new collection: The Field & Forest line is made for tough use when tracking wounded game, as a walking gun or while being out in the field. Extremely durable, weatherproof and breathable fabrics control the microclimate. Stretch inserts ensure maximum freedom of motion providing utmost wearing comfort at any time.

BENEFITS

1. Durability

- Against snagging while moving through the fields or in the forest past shrubs, bushes and branches.
- Highly abrasion-resistant.

2. Waterproofness/Breathability

- Waterproof pants for stalking through wet, high grass.
- Reliable weather protection for changing weather conditions.
- Optimum breathability for active hunting.
- Ventilation for warmer conditions and high activity.

3. Freedom of Motion

- Stretch fabrics inserted into those areas where there is a high elasticity need.
- Best elasticity to durability ratio in the placement of stretch fabrics

left: **Striker SL Cap** The Striker SL Cap perfectly rounds off the Striker outfit. **Striker Jacket** The Striker Jacket brings together bombproof durability with freedom of motion – for maximum comfort even in rugged terrain. **Blaze Weste Ken** Fully equipped blaze vest with Blaser exclusive orange camo designed for the driven hunt. right: **Tackle Softshell Pants** The Tackle Softshell Pants combine high durability with full freedom of motion and weather protection. With reinforcements from the knees downwards.

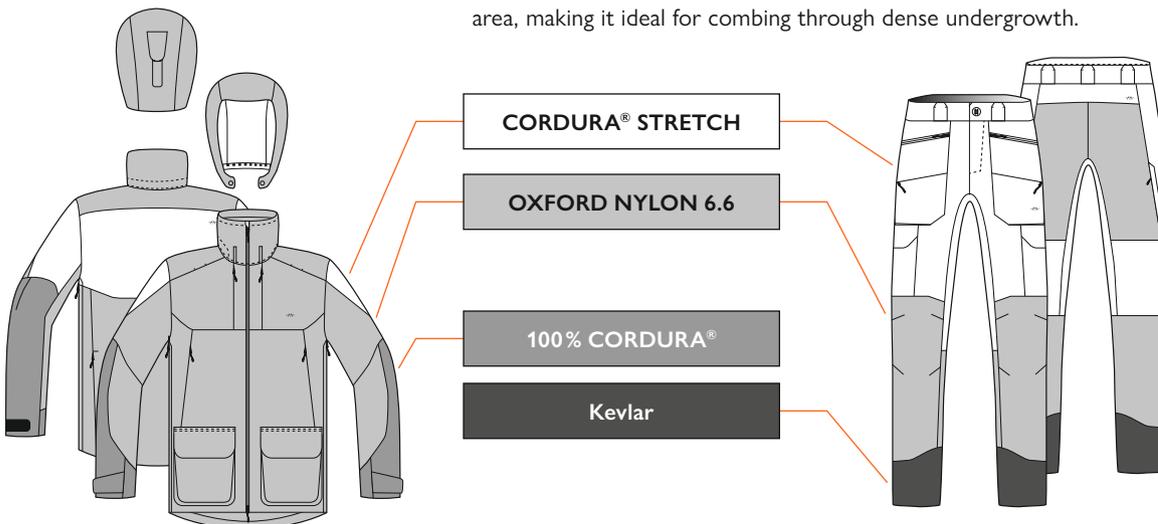

Pearl Beanie Winter beanie with attractive pearl knit design and Argali logo jacquard.

Striker Jacket The Striker Jacket brings together bombproof durability with freedom of motion – for maximum comfort even in rugged terrain **Striker WP Pants** The Striker Pants are the bombproof counter part to the Striker Jacket. The pants are fully equipped with six external pockets to easily store all your hunting necessities as well as ammunition.

FABRIC TECHNOLOGY

- The fabrics selected for our Field & Forest collection originate and are actively used in workwear and military use.
- The Field & Forest styles are made from the very durable base fabric OXFORD NYLON 6.6.
- 100% CORDURA® is body mapped in all high-abrasion and snagging prone zones like knees, shins and lower arms. The result: hardly no snagging and abrasion!
- Zones that require freedom of motion and toughness feature STRETCH CORDURA® fabric.
- Kevlar is extremely abrasion- and tear-resistant. It reinforces the lower leg area, making it ideal for combing through dense undergrowth.

THE BLASER HUNTEC COLLECTION RELIABLE COMPANIONS FOR EXTREME CONDITIONS

Your passion is hunting in mountainous terrain. You want to face this challenge in every weather situation. Exhausting, sweaty ascents in severe weather conditions, towards the tree line. Climbing through rubble fields, observing and chase the game through mountain pastures, using every rock and bush to hide. Coming closer by crawling through moistness and dirt. Whenever you have to rely on your gear – you only can rely on the best.

Defined for

- Hunting in the mountains and rough terrain.
- Physical exertion in constant alternation with resting.

Our Claim:

- Lightweight, flexible and spacious clothing based on the principle of different layers.
- Fast drying – moisture transporting materials are the main focus.
- Clothing for quickly changing and adverse weather conditions.
- Utmost freedom of motion and breathability for physically challenging hunts.

Experience the
world of HunTec!

WHY HUNTEC?

Precision Thermo Regulation (PTR-SYSTEM)

- PTR is an insulation system that provides a precise balance of heat retention vs. breathability for all stages of the hunt and for all conditions.
- Advanced materials, finishings and insulation technologies are combined to perfectly balance heat retention and breathability for different warmth preferences.

Engineered Freedom of Motion

- Garment seam construction is designed around the hunter's motion radius.
- Integration of 4-way and 2-way stretch fabrics.
- Stretch layering is done from the inside out. For example in the insulation jackets the stretch direction is matched on the lining, insulation and shell fabric.

Lightweight

Materials were selected based on the best possible ratios in terms of

- Weight to Durability
- Weight to Stretchability
- Weight to Quietness
- Weight to Packability

The HunTec line is designed for hunters who want to move fast through challenging terrain with a minimal amount of weight.

HunTec Camo – Our Camouflage Gear

To guarantee the best performance when high demands are placed on your gear while hunting in alpine terrain – this was our goal when developing the revolutionary Blaser HunTec collection. Countless information was processed, tests performed under varied light and weather conditions in various terrains to ensure a camo clothing line that will live up to its name – designed for hunters by hunters and made by Blaser.

Operator Jacket The on-the-go insulator with a great balance of warmth to maximum breathability for high activity levels.

Tranquility Jacket Softshell in its truest sense. Super soft and noise-free. With extremely supple, warming grid fleece on the inside. Wind-resistant and with DWR finish.

AIMING PERFECTLY

1 | Blaser Carbon Shooting Stick 2.0 The Blaser Carbon Shooting Stick 2.0 sets new standards. Thanks to the well thought-out optimizations, the shooting stick is not only the ideal solution for a precise shot in difficult conditions, but also even more comfortable to use. The patented pistol grip, which allows the rifle to remain safely on target over a lateral range of 20 meters (referred to 100 meters shooting distance), is unchanged. However, the fore-end rest, which is located on the pistol grip where the rifle rests is reliably fixed with a new safety slide. The rifle can also be directly attached to the fore-end rest with the bipod attachment. **2 | Blaser Carbon BiPod** The Blaser Carbon BiPod is the perfect assistant for ensuring a certain hit when shooting in the prone position. Thanks to the lengthwise adjustment of the legs up to 30 cm, it is useful in nearly every terrain. **3 | Blaser Ultimate BiPod** The Blaser Ultimate bipod is easily adjustable in height from 18.5 - 28.5 cm thanks to spring-loaded legs. The anodized aluminum body provides an ultra stable support. Thanks to the spigot, the bipod can be folded under the barrel and remain on the rifle when carried. **4 | Blaser Carbon Stick** Additional fifth leg for the Blaser Carbon shooting stick 1.0 and 2.0. Lightweight, flexible, non-slip and height-adjustable, the Blaser Carbon Stick ensures that the shooting stick stands stable on its own with the rifle in place. Whether hunting roebuck, wild boar in the field, or on a driven hunt or when shooting at long range, the fifth leg provides the extra in stability and safety. In addition, the rifle does not have to be held continuously when standing for long periods. The Carbon Stick can be easily clamped to the shooting stick thanks to the stirrup lock. A twist lock allows the length to be adjusted from 95 - 180 cm. The fixing rubber of the shooting stick is tightened around the mounted fifth leg for comfortable transport and thus fixes the mounted unit

HUNTING SUCCESSFULLY WITH THE PERFECT EQUIPMENT

1 | Blaser Dog Blanket Quick-drying, lightweight and flexible with small packing size: The Blaser dog blanket in HunTec Camo or olive can be folded, rolled and compactly stored in the included bag. The bottom side is made of waterproof, non-slip PU material. The top side made of polyester is very water repellent. Also suitable as a practical seat when on the move. Washable. Dimensions spread: 100x70cm, rolled: 35xØ10cm. **2 | Blaser Dog Blanket brown** This dog blanket has a comfortable size and can be used practically anywhere thanks to its non-slippery underside. The upper material is an almost indestructible fiber fur. With embroidered Argali. Washable. Size: 100x70cm. Upper: 100% fiber fur, material bottom: 100% polyester, color: brown. **3 | Blaser Hunting Umbrella** Perfectly thought-out weather protection for hunting. The large span width of two meters provides sufficient space for both the shooter and his four-legged companion as well as the hunting equipment. The telescopic aluminum frame allows height adjustment from 1.2 to 2.1 meters – for a comfortable shooting position also while standing. The umbrella can be stuck into the ground using earth spurs and rubber straps to additionally attach it to a tree. Two more rubberized straps provide easy fastening to the driven hunt stand or spar if needed. Transport bag included. Color: HunTec Camo, material: aluminium, polyester; weight: 1,8 kg **4 | Blaser Shooting Pillow** Whether in a high seat or on a shooting range: The Blaser shooting pillow is your perfect support for accurate shooting. **5 | Blaser Silencer Cover** The Blaser Silencer Cover boasts an elegant loden design with leather trims giving every rifle with a mounted silencer a harmonious overall appearance. At the same time, it avoids disturbing noises when carrying the firearm on the hunt. Large (for Blaser Over-Barrel) Ø47–52 mm, 24,5 cm length Small (for Blaser On-Barrel) Ø38–45 mm, 19,5 cm length; Material: Neoprene, loden imitation (60% wool, 40% polyester), leather inlays, PU. **6 | Blaser Sitting Pad “Loden / Leather”** Foldable and compact. This sitting pad (40x35 cm) is soft, robust and space saving. With the practical loop with push button, the pad can be attached to your belt within seconds **7 | Blaser Cordura Cartridge Pouch** Versatile, durable, handy – the new Blaser cartridge pouch is made of robust Cordura and accommodates up to 12 rifle cartridges. **8 | Blaser Heat Pad** Never be cold again. The Blaser heat pad ensures that you do not freeze when sitting for game in winter. The high-performance power bank (10,000 mAh) which is integrated in the zipped side pocket provides comfortable warmth for up to eight hours. The Blaser Heat Pad can be rolled and stowed compactly in the supplied bag. The seating size is 35x40cm. **1+4+5+7** | Also available in Blaser HunTec Camo.

PROFESSIONAL GAME RECOVERY

1 | Blaser Folding Game Bag Folding, extremely robust game bag in waterproof material for easy transportation of harvested game. Large capacity. Adjustable-length handles can be used as grips or practical shoulder straps. WxHxD 60x40x40 cm. **2 | Blaser Game Hauler** Helpful, practical strap for recovering game in difficult terrain. The variable rope with swivel snap can also be used for bleeding out in conjunction with the extremely strong stainless steel hook. Includes two bird totes for easy transportation of harvested small game. **3 | Blaser Ultimate Knife** With a rotating blade and an accurately fitting Kydex sheath. The break-open blade with a bulged tip ensures that the game is broken open cleanly, in particular preventing injury to the rumen. **4 | Blaser Hunting Knife** Made of 440C steel boasting handle scales made of fine walnut wood and a wide droppoint blade. The Full Tang construction, where blade and handle are made from one piece of steel, provides extreme stability when field dressing game. Ergonomic shape and comfortable grip. Leather sheath with belt loop included.

WELL MAINTAINED

7 | Blaser Gun Care Kit Protects your firearm in a unique way. The gun oil provides a particularly high cleaning performance and a long-lasting corrosion protection. The gun grease protects the firearm at a temperature range of minus 50 up to 250 degrees Celsius and against extreme strains. The brush allows for fine application while the microfiber cloth cleans lint-free and without scratches. **8 | Blaser Leather Care Kit** Extremely effective and also easy to use: The included cleaner cleans open-pored leather gently and the conditioner provides long-lasting care. The leather care kit comes with a microfibre cloth, which makes application even more convenient. **9 | Blaser Synthetic Care Kit** The synthetic cleaner purifies gently and deep into the pores because it can be applied much more effectively as a foam with the enclosed brush. The conditioner provides long-lasting care and protects against renewed soiling. The included microfiber cloth cleans lint-free and can also be used for metallic components. **10 | Blaser Gun Oil** Reliably cleans and removes dirt as well as traces of gunshot. Protects against corrosion. Due to its medium creep behavior, the corrosion protection also lasts longer during storage in the gun cabinet. Convenient dosage from the pump bottle. **11 | Blaser Stock Oil** The Blaser stock oil cares for the precious natural material optimally and, when used regularly, ensures that the wooden stock retains its beauty over the years. A select blend of natural oils penetrates deep into the wood and is also completely wax-free. Without harmful silicones, dyes or petroleum products. Including microfiber cloth for a lint-free cleaning. **12 | Blaser Wind Checker** The Blaser Wind Checker should not be missing on any stalk. Finest atomizing powder to detect wind and direction. Works even when the wind feels calm. In small dosing bottle.
