

TRADITION MEETS INNOVATION. HUNTING WITH PASSION.

For decades, this family business, led by the management of **Herbert and Mathias STRASSER**, has been manufacturing essential parts of hunting and sporting weapons for world-renowned brands.

Parts from our production in Austria have accompanied the European space rocket Ariane reliably and safely into space. But above all, we are passionate hunters and know very well what is important out there, and on these strong foundations, we have already set a milestone in the history of hunting rifles with our first trend-setting straight pull system.

This model range, with a patented hydraulic barrel clamping system and appreciated by hunters worldwide, has been enhanced by the B-EX Barrel-Exchange-System, a RS barrel exchange system that was consistently further developed – the **STRASSER RS 14**.

The simplicity of our newly designed RS barrel exchange system enables a reliable and repeatable calibre exchange, a feature already well known from the first model. The new RS barrel exchange system is a dream come true for lovers of innovative, modular and well thought-out technology.

But evolution never stops. So, we have once again further developed our product and adapted it to the needs of modern hunters. The result is the **STRASSER RS 14 EVOLUTION** and the **STRASSER RS SOLO EVOLUTION**. The integrated Picatinny rail makes our system even more flexible in accommodating heavier optics. This integral design additionally strengthens the housing, which ensures increased precision. Parts of the already tried and tested RS trigger are provided with a particularly low-friction and resilient “**DIAMOND LIKE CARBON**” DLC

coating, which further improves the trigger characteristics, making it the top performer in its class.

For all hunters whose activities do not require a change of calibre, the **STRASSER RS SOLO EVOLUTION** offers all the advantages of our straight pull system at an extremely favourable price-performance ratio. The barrel of the **STRASSER RS SOLO EVOLUTION** is supplied with the calibre of your choice and fulfils its function with consistently high performance and reliability.

The safe and precise design and the ergonomic operating functions make our popular **straight pull system** a reliable hunting companion both at home and abroad.

AVA-TAHR

THE STRASSER AVA-TAHR MODELS

THE LONG-AWAITED HUNTING RIFLES

WITH SYNTHETIC STOCKS

The long-awaited **STRASSER AVA-Tahr models** are made with sturdy synthetic stocks! It is the ultimate working tool made of solid polyurethane, 100% Made in Austria! They are not hollow, but made of solid material, which emphasizes the quality and they are thereby significantly lighter than, for example, models with walnut stocks. The stock is not only particularly grippy due to its special surface coating, but also insensitive to scratches.

7 different recoil pads are offered to perfectly fit the stock to the shooter's length. Each stock comes with the 28mm pad, which is our standard stock length. With the different recoil pads it can be adjusted from -15mm to +15mm.

Color: Forest-Green

RS SOLO EVOLUTION AVA-Tahr

STRASSER RS 14

FOCUSSED ON INNER PERFECTION.

FRONT SIGHT (OPTIONAL)

Height adjustable, red fiber optic front sight for quick target acquisition.

REAR SIGHT (OPTIONAL)

Light yellow insert, adjustable for windage.

BARREL

The PlasOx coated RS exchangeable barrels come threaded M14x1 for a muzzle brake or suppressor. Iron sights are optionally available.

FORE-END

Completely free-floating, with on-board tool storage for the B-EX Barrel Exchange System.

QUICK DETACH SCOPE MOUNT

Unique and elegant STRASSER three-point ball-seat assembly. Precise and extreme repeatability!

EASY CALIBER CHANGE

Change the bolt head in only a few seconds!
Three bolt heads are offered in MINI, STANDARD and MAGNUM diameters.

LIGHTNING-FAST FOLLOW UP SHOTS

Our straight-pull bolt-action is the fastest available.
Now with optional 45° bolt handle.

SAFETY

Intuitive, vertical safety catch locks both bolt and firing pin for the ultimate in safety.

BARREL EXCHANGE SYSTEM

The new, patented, mechanical B-EX Barrel Exchange System, for unrivaled convenience and accuracy.

MAGAZINE

Made of tempered steel and high-strength aluminum.

TRIGGER

Removable combination trigger with field-adjustable trigger weight; houses the Allen wrench to disassemble the rifle.

STOCK

New ergonomic stock shape considerably reduces felt recoil, and is available in several wood grades.

STRASSER RS 14

SAFE. FAST. PRECISE. MODULAR. ELEGANT. AND YET SIMPLE.

The **STRASSER RS 14** is STRASSER's modular flagship. With more than 27 different calibers available, it is the Swiss Army knife of premium hunting rifles.

Fast. Safe. Elegant. The STRASSER RS 14 is the most trustworthy partner out on the hunt, or at the range. Thanks to the large variety of calibers on offer, it is unbeatable when it comes to its range of applications - from varmints to buffalo, the RS 14 has you covered!

Made of tempered steel and high-strength aluminum.

TRIGGER

Removable combination trigger with field-adjustable trigger weight; houses the Allen wrench to disassemble the rifle.

*Optics are not included.
The model illustrated is the RS 14 EVOLUTION special edition.

STRASSER RS 14 EVOLUTION OUR NEWEST INNOVATION.

The **STRASSER RS 14 Evolution** is the ultimate straight-pull bolt action rifle. We engineered a Picatinny rail directly into the receiver, so you can have a wide range of low-cost optics mounting options, from an almost infinite number of vendors.

You don't need to use any proprietary mounts – a simple set of steel or aluminum scope rings will accommodate most optics and provide a strong, repeatable mounting system. Unlike traditional bolt action rifles, there are no separate scope bases, which rely on a couple of tiny screws to keep them in place – when you're on the hunt of a lifetime, stronger is definitely better.

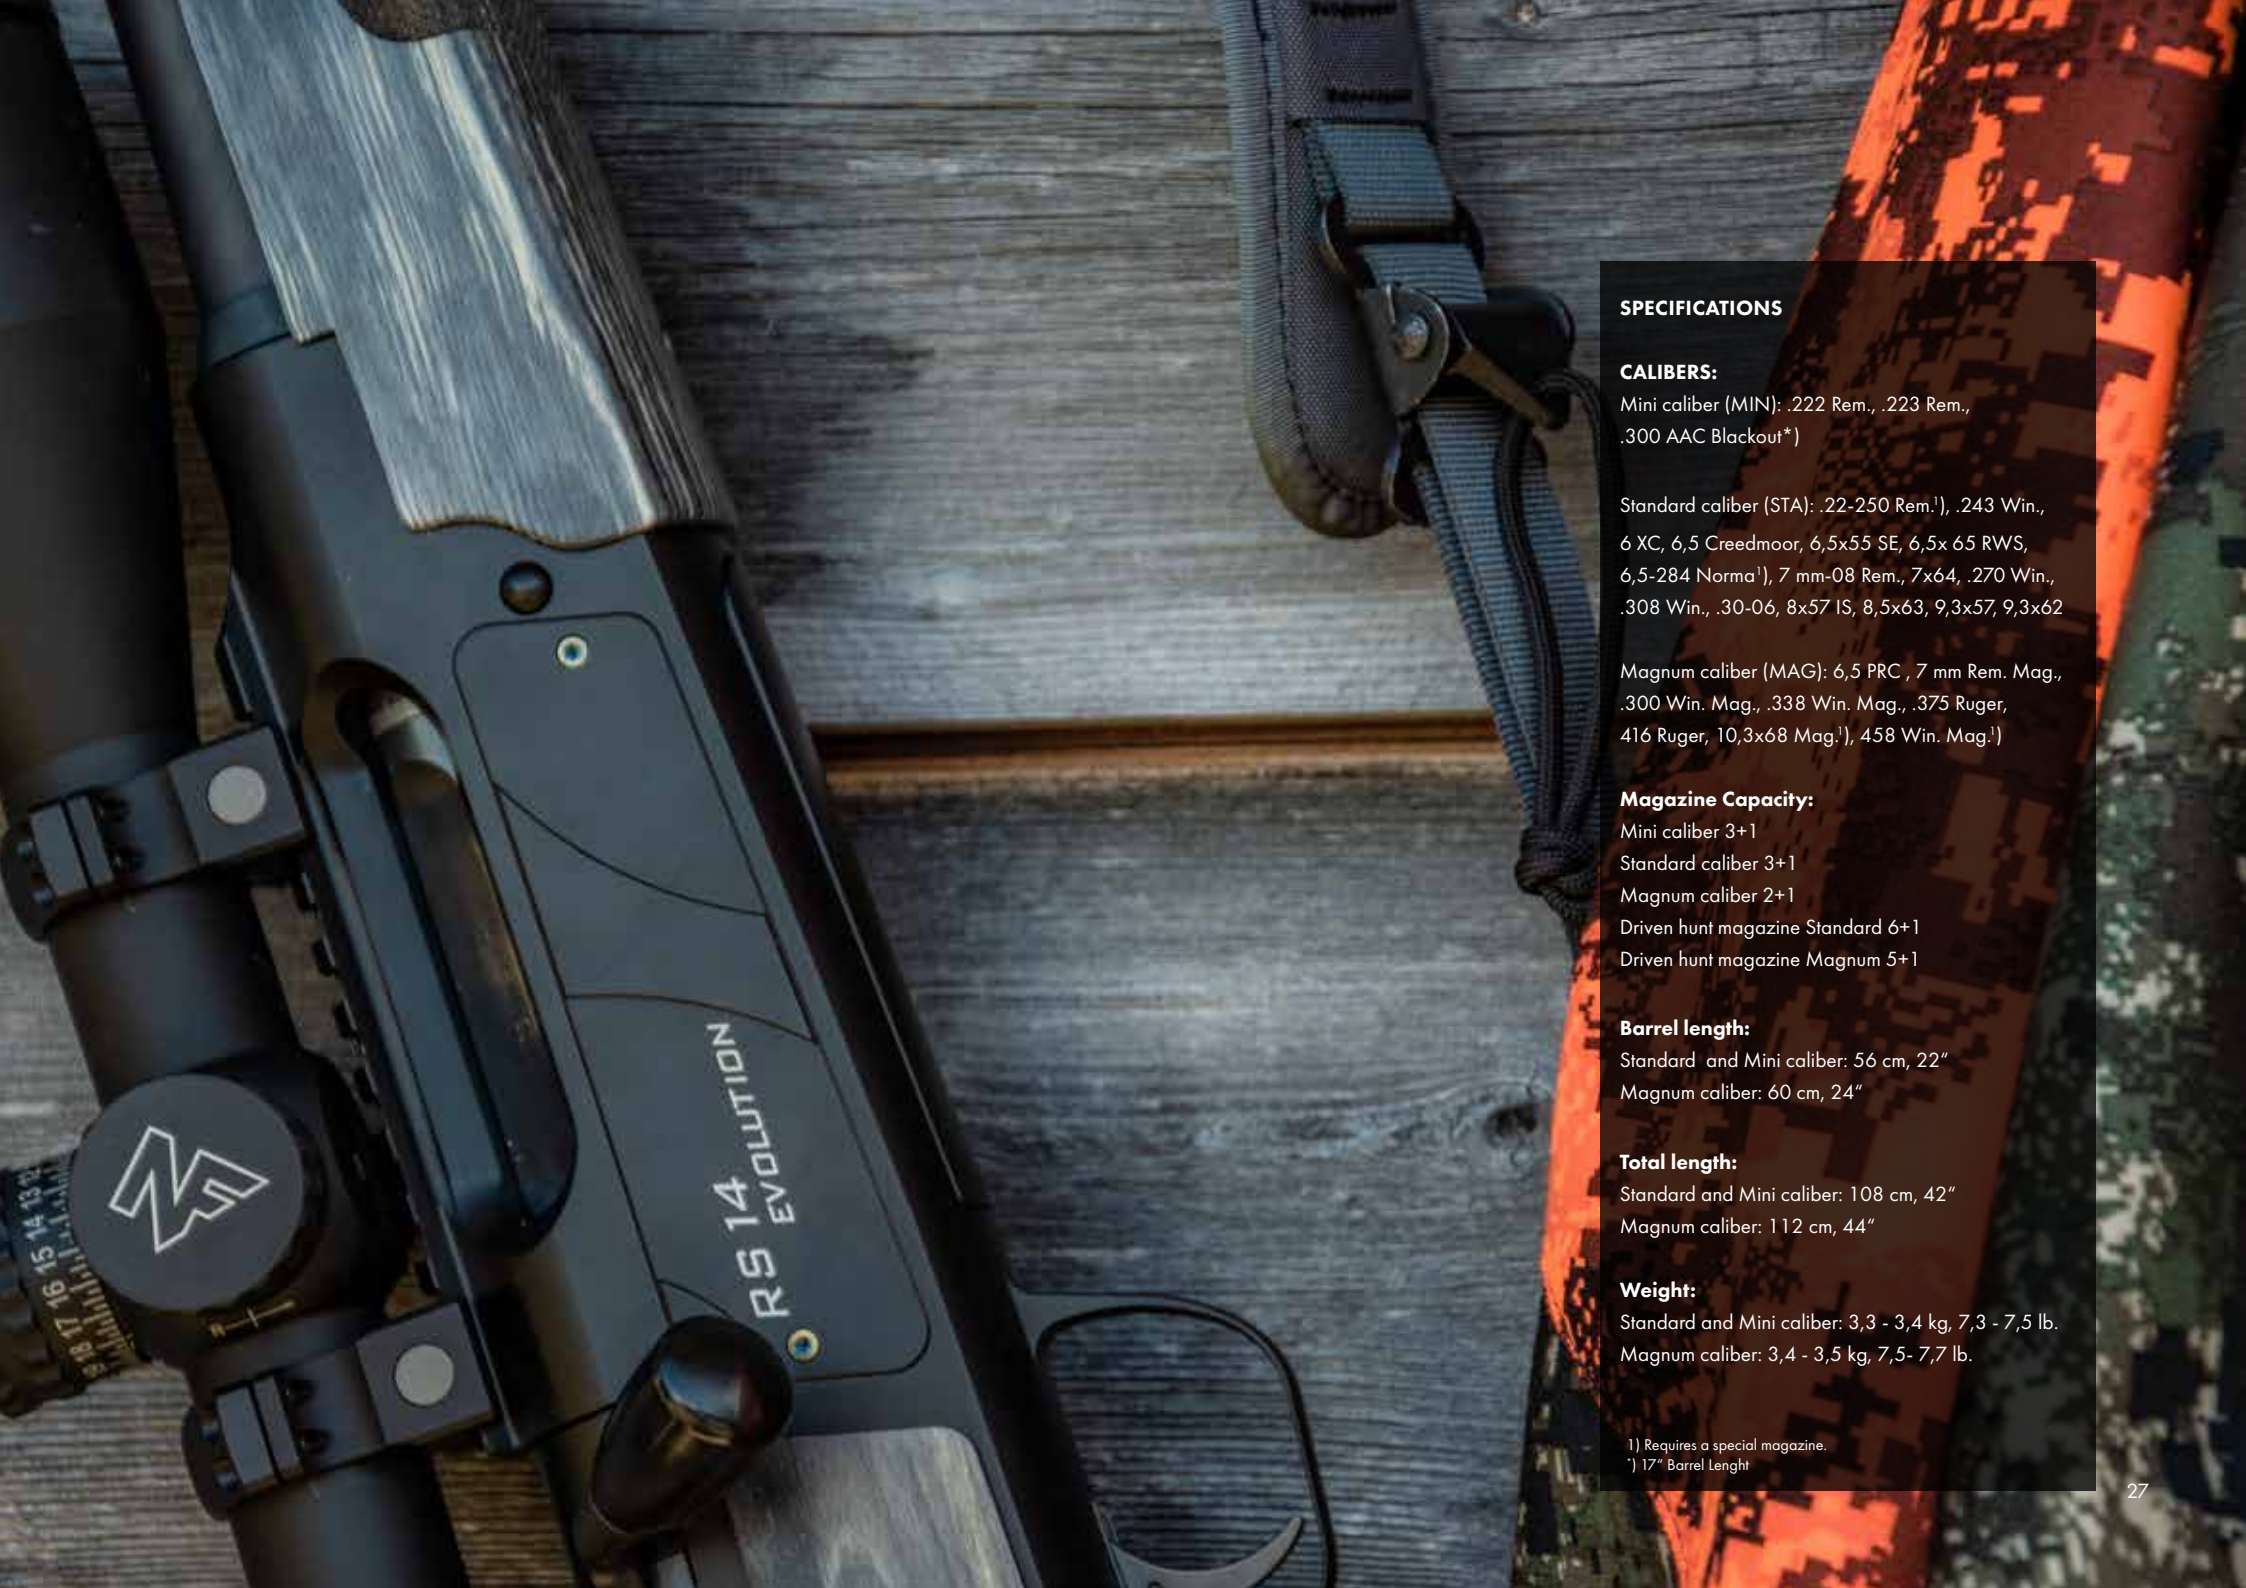

The **Picatinny rail** has an added benefit of reinforcing the receiver, making it exceptionally rigid so that you can be sure that the rifle is as accurate as it's possible to be. Further enhancements to accuracy and shootability are our field-adjustable, single stage trigger, which can be changed in seconds to your preferred pull weight, and our fully floating barrel which is never contacted by the beautifully sculpted fore-end.

Furthermore, the parts of the approved RS trigger are equipped with **"DIAMOND-LIKE CARBON"** DLC-coating, which is particularly resilient and very low in friction. This further improves the trigger characteristics and makes the gun the top performer in its class.

STRASSER RS SOLO EVOLUTION

YOUR RELIABLE HUNTING COMPANION.

The new **STRASSER RS SOLO EVOLUTION** is the leading straight-pull bolt action rifle of its class. Made in Austria to the highest quality standards, it offers a fixed barrel on top of all the benefits of the STRASSER RS straight-pull system when it comes to safety, precision and speed - all this with an outstanding price-to-performance ratio.

STRASSER's leading, safe, straight-pull lock system, the hard-coated receiver made of a high-strength aluminum alloy, the steel elements protected from corrosion by cutting-edge technology and the ergonomic stock with its traditionally designed Bavarian cheek piece make the STRASSER RS SOLO EVOLUTION a reliable companion for avid hunters.

**ONE FOR ALL.
CHANGING CALIBER
MADE EASY.**

STEP BY STEP IN 30 SECONDS:

The mechanical function of our newly patented **B-EX Barrel Exchange System** enables an absolutely repeatable barrel change. Due to the exceptionally long bearing surfaces between the barrel and receiver, along with the machining tolerances you'd expect from a company that builds parts for space vehicles, you can disassemble and reassemble your rifle and be confident it'll return to zero.

No other rifle manufacturer offers a barrel exchange system that is so accurate and so simple. The removable barrel is fastened using a mechanical connection with a consistent clamping force, which is set between narrow parameters at the factory. As a result the barrel is gripped with a predefined and always consistent torque. The on-board clamping lever only needs to be moved through one third of a turn to lock or release – no tools to forget, no guesswork, no problem.

STRASSER straight-pull bolt action rifles are conceived and designed for versatile hunting use. They work reliably and extremely safely with a wide range of commercially offered calibers, from the smallest to the largest.

Bolt heads can be exchanged to swap between different case head diameters. Insertion of the bolt head is performed in a few simple steps using the integral latch. Three bolt heads are available for mini, standard and magnum calibers.

Mini caliber (MIN):

.222 Rem., .223 Rem., .300 AAC Blackout*)

Standard caliber (STA):

.22-250 Rem.¹⁾, .243 Win., 6 XC, 6,5 Creedmoor, 6,5x55 SE, 6,5x 65 RWS, 6,5-284 Norma¹⁾, 7 mm-08 Rem., 7x64, .270 Win., .308 Win., .30-06, 8x57 IS, 8,5x63, 9,3x57, 9,3x62

Magnum caliber (MAG):

6,5 PRC , 7 mm Rem. Mag., .300 Win. Mag., .338 Win. Mag., .375 Ruger, 416 Ruger, 10,3x68 Mag.¹⁾, 458 Win. Mag.¹⁾

¹⁾ Requires a special magazine

²⁾ 17" Barrel Length

The **STRASSER straight pull bolt action rifle** demonstrates its mature development character in every detail, including when changing magazines. Two release buttons on both sides of the aluminium receiver are placed so that when they are operated the double-locking magazine falls directly into the hand. Both buttons must be pressed, ensuring the magazine does not release inadvertently. When hunting on the move, enhanced capacity magazines ensure plentiful reserves at high rates of fire.

Driven hunt magazine:

STA: 6+1 shots,
MAG: 5+1 shots

FAST, FASTER, RS STRAIGHT-PULL ACTION.

The **STRASSER straight-pull bolt action rifle** with its short bolt lever opening movement always provides for lightning fast follow-up shots.

The RS straight-pull bolt action system is the shooter's best friend when a successful hunt

depends on a rapid rate of fire. The particularly smooth bolt action of this lightning-fast system is engineered with the same high quality in all models. The hunter feels the precision with which our rifles were created with every shot.

**ACCURATE IN
EVERY DETAIL.
HUNTING
SUCCESS WITH
EASE.**

The new **STRASSER RS14 EVOLUTION** incorporates an integrated Picatinny rail, milled into the high-strength aluminum receiver. This offers even more flexibility and robustness for every hunting situation, as the user no longer needs a specialized mounting system. The associated Picatinny rings are standardized and can be purchased in any gun store.

THE RS RADIAL ELEMENT BOLT. IT DELIVERS WHAT IT PROMISES.

A RIFLE IS ONLY AS GOOD AS ITS TRIGGER.

For this highly sensitive component all **STRASSER straight-pull bolt action rifles** are provided with a solution that is without equal. The trigger assembly can be removed in the field without tools. The combination single stage trigger can be set to three weights, light, medium or heavy, also without tools. The set trigger can be adjusted to a trigger weight of 100-200g (3.5-7 ounces). And finally an automatic resetting mechanism ensures the all-round safety of this assembly when the bolt is open.

The straight-pull bolt action rifles from **STRASSER** feature an innovative bolt that locks into the barrel extension and ensures the shooter's safety, even under the highest gas pressures. It consists of four high-precision, quadrant-shaped, solid locking lugs made from heat treated tool steel. In the locked state these positively engage over their entire locking surface with corresponding slots in the barrel extension and optimally absorb the resulting forces. In this way the RS radial element bolt ensures the utmost safety and precision in all calibres – shot after shot.

The new RS bolt technology with the highest safety standard

In the course of development we have further refined our already very secure bolt technology. Thanks to a small rotating part made of tempered steel, STRASSER straight-pull bolt action rifles are among the safest in the world. In the clamped and locked state this additional component rotates behind the bolt head locking wedge and unfailingly locks it in position. This positively controlled safety technology ensures that the radial components of the bolt are always locked into the barrel and absorb the resulting forces with enhanced safety reserves. This patented system ensures the highest safety reserves - unprecedented in straight-pull bolt action technology - and ensure the shooter's safety even in the event of an over pressure event.

STRASSER RS EXTRA BARREL

CHANGING CALIBER MADE EASY.

STRASSER straight-pull bolt action rifles are conceived and designed for versatile hunting use. They work reliably and extremely safely with all commercially offered calibers. The insertion of the bolt head is performed in a few simple steps using the latch. Three bolt heads are available for mini, standard and magnum calibers.

Attention: if you switch from one caliber group to another you have to make sure that you also change to the right magazine and bolt head!

STRASSER SCOPE MOUNTS

AN INTRINSICALLY PRECISE MOUNTING.

The **straight-pull bolt action rifles from STRASSER** are prepared for a specially developed three-point ball seat mounting. This geometrically perfect shape means that this mounting sits particularly low down on the receiver with highly accurate repeatability. The bayonet catch enables mounting and dismounting with one hand. Fast, easy and precise!

STRASSER TRIGGER

A RIFLE IS ONLY AS GOOD AS ITS TRIGGER.

RS05.621	Combi Trigger
RS05.624	NX-Trigger
RS05.625	Extra charge NX-Trigger
RS05.623	Extra charge trigger gold coloured

THE NEW STRASSER NX TRIGGER UNIT CONSISTENT DEVELOPMENT.

All the enthusiasts of our Strasser combi triggers who already know about good trigger behaviour will simply love this further development!

We have designed a new trigger with excellent trigger characteristics for all those who always wanted a pure direct trigger.

The new **NX trigger unit** (Next Generation) from STRASSER is impressive, thanks to a trigger weight of around **680 grams**, a length-adjustable trigger and a perfectly adjusted trigger stop.

The support lever is DLC (Diamond Like Carbon) coated in the usual manner and, additionally, enhances the fantastic trigger characteristics of our new NX trigger unit. The trigger guard's new design gives the entire rifle a sporty look and thus clearly stands out among our combi triggers.

Every STRASSER rifle can be directly configured with the new NX trigger unit. Retrofitting*) is, of course, also possible on request. Available from summer 2021

*) The trigger must be adjusted for the relevant system by a certified Strasser dealer.

The new **STRASSER** bipod **BONE**

OUR STRASSERS ARE NOW EVEN BETTER THAN BEFORE.

**WE HAVE MADE IT OUR
GOAL TO CREATE THE PER-
FECT BIPOD FOR HUNTERS,
SHOOTERS AND LONG
RANGE ENTHUSIASTS!**

**A LOT OF THOUGHT AND
IDEAS WENT INTO OUR
NEW PROJECT, THAT'S FOR
SURE.**

Our love for details coupled with innovative ideas, our know-how and use of robust and high-quality materials, gave rise to our first own Strasser bipod, the **STRASSER BONE**.

There is a huge range of bipods on the market; all their good and useful features were analysed, partly adopted and integrated with new innovative "**STRASSER genes**". The result is definitely the most universal bipod available.

High-alloy aluminium was used, harmoniously matched and combined with high-quality, high-strength carbon.

RS14.701
BONE Carbon Bipod

RS14.702
BONE Carbon Bipod LONG

LIGHT- STABLE- UNIVERSAL

With no less than seven different adapters, STRASSER offers almost all shooters the possibility of coupling the **STRASSER BONE** with a variety of weapons.

The **STRASSER BONE** can be mounted on any fore-end stock with two screws, using the STRASSER Universal Adapter. By means of a M-LOK, KeyMod and Picatinny adapter, it can also be combined with all modern sporting and official rifles.

Specifications:

Weight: 270 grams / 280 grams

Leg (pod) length from 7.5" - 10.5" / 10,5" - 13,5"

Non-slip rubber feet

Hardened steel tips

0 - 45 - 90 degree detent positions

90 degree detent is spring loaded and allows traversing (from right to left approx. 20 degrees)!

Available adapters:

RS14.711 **M-LOK**

RS14.712 **KeyMod**

RS14.713 **Universal**

RS14.714 **Picatinny**

RS14.715 **Sling swivel US**

RS14.716 **Sling swivel EURO**

RS14.717 **Blaser**

STRASSER LODEN RIFLE SUPPORT

The ultralight STRASSER rifle support made from sturdy loden is the perfect accessory for the discerning hunter. Being able to take a controlled, precise shot is fundamental to a huntsman's craft and was our number-one priority when designing this perfectly shaped rifle rest.

Dimensions (LxWxH): Approx. 250 x 140 x 40mm

Total weight: Approx. 90 Gramm

RS05.099

WE DESIGN YOUR OWN PERSONAL HUNTING RIFLE. A RIFLE IS AS INDIVIDUAL AS ITS OWNER!

Super Luxus, Exclusive I and Exclusive II are our hand engraved beauties that leave the owner no desire unfulfilled.

You can let your own hunting experiences flow into this rifle, such as a motive of your favourite species of deer or other personal wishes. Irrespective of whether you opt for flat engraving on the Super Luxus model or relief engraving on the Exclusive I and Exclusive II models.

Local or even African game, anything is possible and is naturally hand engraved to the customers wishes. Each piece is unique and therefore a matchless hand engraved masterpiece.

We combine the best quality handicrafts with selected burl wood and unite them in timeless elegance and the personal hunting rifle you dream of.

Be inspired by nature and all its beauty!

STRASSER CLASSIC SHOULDER STRAP

Our high-quality dark brown STRASSER Classic shoulder strap made of buffalo pull-up leather boasts excellent functionality and a classic design! The brown yak leather trim provides a striking contrast. The strap has a so-called „lightning button“ - simply pull up the button and push it in again, and when it goes „click“, that means it's sturdy as a rock. The „lightning button“ is THE ultimate practical solution to fasten and release your rifle strap at lightning speed.

Dimension (L): Approx. 103cm (non-adjustable)

RS05.093

Classic shoulder strap

STRASSER SPORT SHOULDER STRAP

This shoulder strap can be quickly adjusted by pulling the handle with the D-ring. For example, the STRASSER RS 14 Evolution Tracker can be brought into stalking position or fixed on your back when working. Simply by pulling on the paracord loop, you can release the shoulder strap again and move it into position or ready your weapon. The carrying strap is released again and you can move into position or stop behind the rifle.

The material consists of 6mm spacer fabric with a top layer of 1000D Cordura, which guarantees your product will last. Molle loops are sewn onto the top side for attaching a fastening or similar directly to the strap.

Dimension (L): Approx. 180cm (adjustable & can be shortened)

THE REBIRTH OF A LEGEND

RS 700

At STRASSER, „Passionate Innovation“ is more than just a company slogan. Passionate Innovation is our ethos, guiding principle, and represents the unrelenting spirit of each STRASSER employee. That ethos is the very reason why we are always challenging ourselves to push the envelope in product development and to even discover new advancements for legacy products that most have accepted as „good enough“.

More than 60 years ago, Mike Walker designed the first Remington™ 700. Since its inception in 1962, the Remington™ 700 has grown to be one of the most profligate and broadly manufactured bolt-action rifles and actions produced in the world. Combine STRASSER's „Passionate Innovation“ to the Remington™ 700 design and the result is the world's first STRASSER 700 straight-pull-action, the RS 700.

**ONE ACTION
MILLION OPTIONS**

RS 700 Barreled Action

Ambidextrous actions: Every RS 700 action is fully ambidextrous and can be fitted in a right-hand and left-hand stock. There is also a recess for right-hand and left-hand safety-levers on both sides of the action.

Ambidextrous bolt-catch: Not only does the slide catch elegantly fill the recess for the bolt handle of your Remington 700 stock but it can also be mounted on both sides of the action.

All steel construction: The RS 700 is designed to last. All parts of the action are made from high-strength steel, just like his great idol.

PlasOx surface protection: All the steel parts must be protected against the hardest conditions. That's why all parts are surface-hardened and oxidized to withstand scratches and corrosion like no other protection.

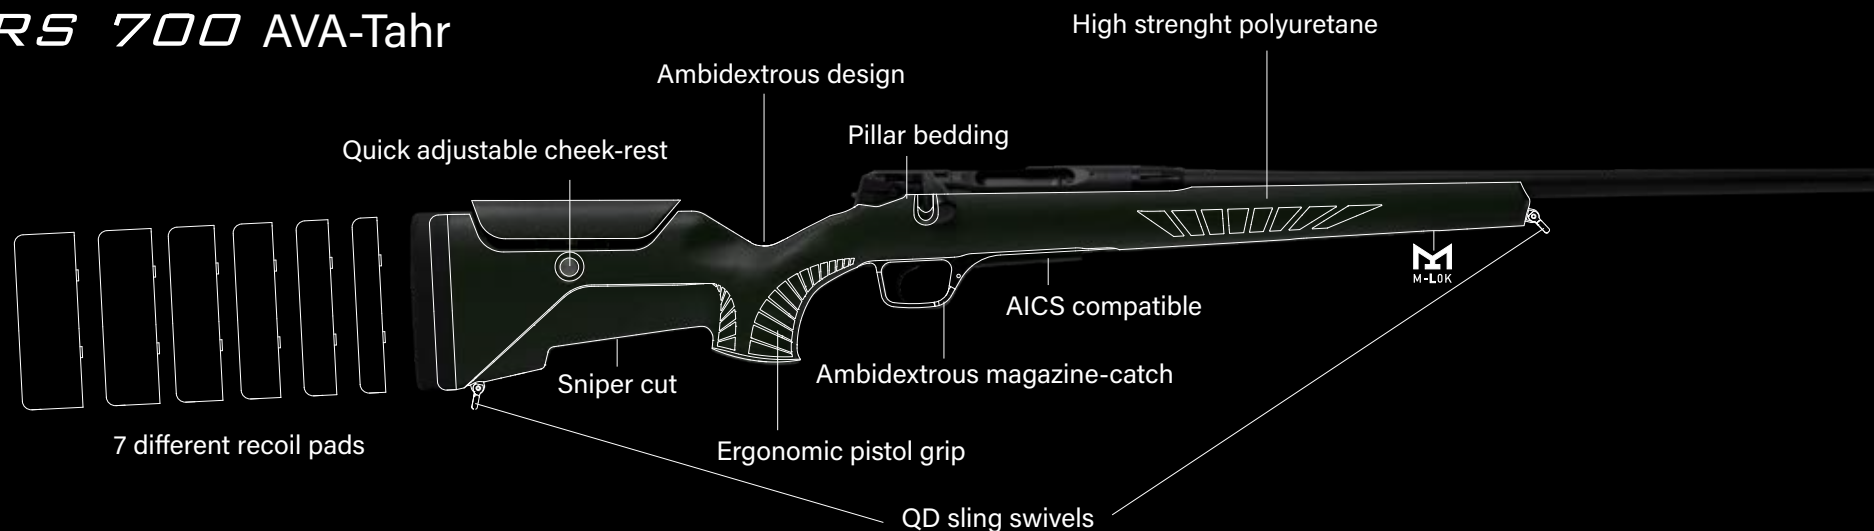

Precision barrels: When precision counts you can count on our match grade cold-extruded barrels. Unparalleled precision and durability is our standard.

Muzzle thread: All barrels are equipped with a muzzle-thread to accommodate your muzzle device like a moderator.

Firing pin indicator: The Indicator is directly connected to the firing pin. You can see and feel the state of your rifle.

Timney trigger: Because we don't do things by halves, we have teamed up with the best. A Timney Hunter Elite Trigger is part of every rifle. It comes with the two position safety and a pre-adjusted pull-weight of 2,5 pounds.

RS 700 AVA-Tahr

High strenght polyuretane: The Ava-Tahr stock is not only a trend-setter when it comes to its ergonomic design but also the choice of material. Due to the polyuretane material the stock is strong, light-weight and made from full material. No more annoying, cheap looking hollow stocks.

7 different recoil pads: Changing the length of a stock can be expensive. With our 7 different recoil pads, you can inexpensively adjust the length of the stock to your needs in a matter of seconds.

Quick adjustable cheek-rest: With the button on the side you can extend and retract the cheek-rest in a matter of seconds. Useful when using high mounts or night vision optics.

Pillar bedding: To reduce stress in the stock the pillars transmit the clamping force of the action-screw directly from the bottom-metal to the action without any tensions.

Sniper cut: For a precise shot the passive hand should pull the stock in your shoulder to release tension from the active hand. The sniper cut will help you with that.

Ergonomic pistol grip: A steep angle and palm support on both sides will give you perfect control, shot after shot.

Quick detachable sling swivels: Removing the sling from the swivels can be annoying. With the QD sling swivels you can take off the swivels together with the sling in seconds.

Ambidextrous design: Do you want to share your right-handed rifle with your left-handed friend? No problem. The stock is ambidextrous and super ergonomic for both users.

M-Lok: Every Ava-Tahr stock comes with a M-Lok insert to accommodate your accessories, like your Bone bipod.

AICS compatible: AICS stands for „Accuracy International Chassis System“ and is the standard on the market for magazines. Every double row- single feed AICS compatible magazine will fit the rifle. Polymer as well as metal with and without binder plate.

Ambidextrous magazine catch: Easy to access from both sides in any position.

RS 700 LEGEND

Ergonomic design: Different than the AVA-Tahr the Legend is designed for right-hand or for left-hand users. This gives the stock its beautiful classic shape combined with modern lines to underline its fresh character.

Premium grade wood: All Legend stocks are made from the best walnut rootwood because a legend not only has to shoot well, but also has to look good.

Rose wood tip: A classic element with wooden stocks is the rose wood tip with a red inlay.

Pillar bedding: To reduce stress in the stock the pillars transmit the clamping force of the action-screw directly from the bottom-metal to the action without any tensions.

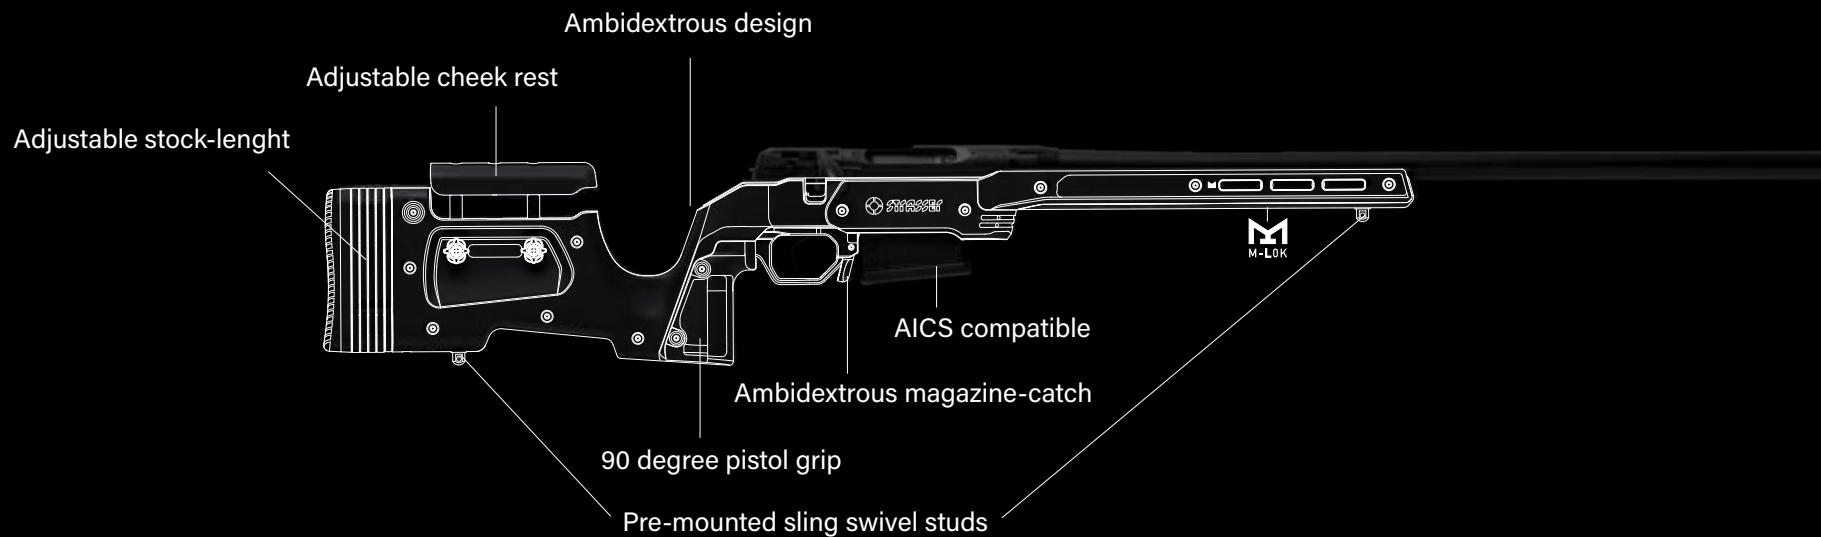

Quick detachable sling swivels: Removing the sling from the swivels can be annoying. With the QD sling swivels you can take off the swivels together with the sling in seconds.

M-Lok: Every Legend stock comes with a MLoc insert to accomodate your accessories, like your Bone bipod.

AICS compatible: AICS stands for „Accuraty International Chassis System“ and is the standard on the market for magazines. Every double row- single feed AICS compatible magazine will fit the rifle. Polymer as well as metal with and without binder plate.

Ambidextrous magazine catch: Easy to access from both sides in any position.

RS 700 XRS Chassis

Ergonomic design: Once you've held this stock in your hand, you won't want to let go of it. It fits like a glove.

Barrier stop: For all the PRS shooters out there- the barrier stop is not only corrugated but also the center balance point of the RS 700.

Flat for-end: Shooting from different positions was never easier than with the wide, flat for-end of the XRS chassis.

M-Lok: Every XRS stock comes with MLoc mounting points all over the for-end to accomodate your accessories, like your Bone bipod.

Sniper cut: For a precise shot the passive hand should pull the stock in your shoulder to release tension from the active hand. The sniper cut will help you with that.

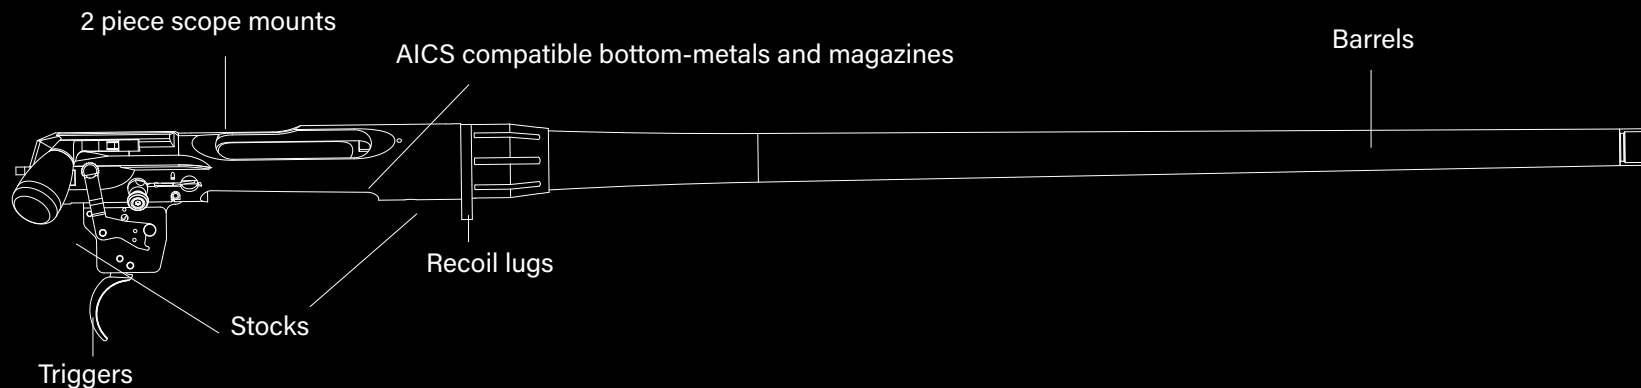

Ambidextrous design: Do you want to share your right-handed rifle with your left-handed friend? No problem. The stock is ambidextrous and super ergonomic for both users.

AICS compatible: AICS stands for „Accuracy International Chassis System“ and is the standard on the market for magazines. Every double row-single feed AICS compatible magazine will fit the rifle. Polymer as well as metal with and without binder plate.

Ambidextrous magazine catch: Easy to access from both sides in any position.

Pre-mounted sling swivel studs: Just in case you have to carry your XRS for a while we have the studs installed. Easy to remove for sport-shooting.

Compatibility with the Model 700 Short Action

Stocks: The RS 700 is compatible with all right-hand and left-hand 700 Short Action stocks. In case you want to change the stock from right to left or the other way you even can change the bolt-catch which not only elegantly fills the recess for the bolt handle of your Remington 700 stock but can also be mounted on both sides of the action.

Barrels: Our action takes all 700 barrels with barrel nut or with shoulder. Since we use a so called „fat bolt“ design there is a small rework to be done to accommodate our bolt which is slightly bigger in diameter.

AICS compatible: AICS stands for „Accuracy International Chassis System“ and is the standard on the market for magazines. Every double row- single feed AICS compatible magazine will fit the rifle. Polymer as well as metal with and without binder plate.

Triggers: All 700 triggers are compatible with our rifle.

2 piece scope mounts: Do you like a fixed scope mount or an elegant swing-mount? It's your choice.

Recoil lugs: Our recoil lugs are made from high strength steel according to Modell 700 specs.

SAFETY AND PASSION MAKE HUNTING A SPECIAL EXPERIENCE.
